THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 33]

JANUARY, 1935

[NUMBER 1

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

**E**MPLOYMENT at the beginning of December, 1934, showed a seasonal recession as compared with the preceding month, but this was much smaller than the average contraction indicated between November 1 and December 1 in the experience of the years since 1920. The Dominion Bureau of Statistics tabulated reports from 9,001 employers, whose payrolls were reduced from 938,006 at the beginning of November to 925,225 on December 1, 1934. The index (average 1926=100) declined from 100.2 on the former date to 98.9 on December 1, as compared with 91.8 at the same date in 1933. On December 1 in the twelve preceding years the index was as follows: 1932, 83.2; 1931, 99.1; 1930, 108.5; 1929, 119.1; 1928, 116.7; 1927, 108.1; 1926, 102.3; 1925, 96.5; 1924, 91.9; 1923, 96.9; 1922, 96.3 and 1921, 88.3.

At the beginning of December, 1934, returns were furnished to the Department of Labour by 1,735 local trade unions with a membership total of 159,169 persons. Of these 27,904 or 17.5 per cent were without employment, contrasted with a percentage of 16.2 at the beginning of November, 1934, and 20.4 per cent at the beginning of December, 1933.

Reports received by the Department of Labour from the offices of the Employment Service of Canada showed an increase in the work transacted during November, 1934, when a comparison was made with October, but a decrease from that recorded during the corresponding month a year ago, the marked change in both instances taking place in construction and maintenance. Vacancies in November, 1934, numbered 35,809, applications 58,243, and placements in regular and casual employment 34,189.

In retail prices the cost per week of a family budget of staple foods, fuel and lighting and rent at the beginning of December was \$16.02 as compared with \$16.03 for November; \$15.83 for December, 1933; \$22.11 for December, 1929; \$21.40 for December, 1926; \$21.49 for December, 1921; \$26.92 for

July, 1920 (the post war peak); and \$14.26 for December, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1926 as 100 was unchanged in December from the level of November, namely 71.2. Comparative figures for certain previous dates are 69.0 for December, 1933; 96.0 for December, 1929; 97.9 for December, 1926; 96.4 for December, 1921; 164.3 for May, 1920 (the post war peak); and 66.4 for December, 1914.

The table on page 2 gives the most recent statistics available reflecting industrial conditions in Canada. The index of the physical volume of business showed a recovery in November following the decline of the two previous months. The level of this index in November was 13 per cent higher than in November, 1933. Of the principal factors included those used as indicators of manufacturing, construction, electric power output, carloadings and imports were higher, while mineral production and trade employment were lower. As compared with November, 1933, all these factors showed improvement. Information available for December shows a slight seasonal decline in employment. The index was, however, substantially higher than in December, 1933. Carloadings were considerably lower than in the preceding month but higher than in the corresponding month of 1933.

The figures for strikes and lockouts during December were the lowest for any month since 1930 except those for April, 1933, there being only eight disputes recorded, involving 400 workers and resulting in time loss of 3,523 man working days. In November, 1934, there were recorded thirteen disputes involving 1,542 workers, resulting in a time loss of 17,182 working days, while in December, 1933, there were sixteen disputes involving 3,902 workers with a time loss of 55,477 working days. None of the disputes during December involved a large number of workers or resulted in substantial time loss. In November, strikes of loggers at Sault Ste. Marie, Ont., and coal miners in Vancouver Island, B.C., caused time

## MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(Official statistics except where noted)

(1) Calculated from yields of Ontario bonds.

(2) For group figures see articles elsewhere in this issue.

(3) Figures for end of previous month.

(4) Figures for four weeks ending December 29, 1934, and corresponding previous periods.

(5) Sugar production given in periods of four weeks ending December 1, November 3, and October 6, 1934; December 2, November 4, and October 7, 1933.

(6) MacLean's Building Review.

(7) Operating expenses for 1934 include pensions.

loss during the month of 5,000 and 6,000 days respectively. In December, 1933, strikes of loggers in the northern part of Ontario and Quebec resulted in time loss of over 30,000 days, while a strike of woollen mill employees at Hespeler, Ont., caused a time loss of 10,000 days. Five disputes were carried over from November and three disputes commenced during December. Seven of the eight disputes were terminated during the month, two resulting in favour of the employers, two in favour of the workers, while compromise settlements were reached in three cases. Only one dispute, involving seventy-three workers, remained unterminated at the end of the month. These figures do not include those strikes and lockouts in which employment conditions were no longer affected, but which had not been called off or definitely declared terminated by the unions involved.

#### **Ontario and Quebec confer on labour legislation.**

A conference was held at Montreal on December 22 between the Hon. C. J. Arcand, Minister of Labour for the Province of Quebec, and the Hon. A. W. Robb, Minister of Labour for Ontario, for the purpose of securing a measure of uniformity in certain labour legislation in the two provinces. Another meeting was held at Montreal on January 7, those present being the Hon. Mr. Arcand, Mr. J. F. Marsh, Deputy Minister of Labour for Ontario; Mr. Gerard Tremblay, Deputy Minister of Labour of Quebec; Mr. A. W. Crawford, chairman of the Ontario Women's Minimum Wage Board; and Mr. Gustave Franq, chairman of the Quebec Women's Minimum Wage Board. According to reports in the press the chief problems discussed at these meetings were as follows: Quebec's success with its law for the juridical extension of collective labour agreements; the province's act for the limitation of hours of labour; minimum wages for women; wages paid in Ontario and Quebec lumber camps and the possibility of governmental control thereof; and the advisability of legislation decreeing minimum wages for men in certain trades.

#### **Regional interstate compacts on labour laws in United States.**

A movement towards greater uniformity in labour legislation is in progress in the United States, with the sanction and support of the Federal labour authorities. This movement, as described by the *New York Times*, December 11, "bids fair to work out a scheme of regional

government in a field between that occupied by the Federal government and that reserved for the individual States." An "interstate Conference on Labour Compacts" was formed last year with eight eastern States as members—New York, New Jersey, Pennsylvania, Maine, Massachusetts, New Hampshire, Rhode Island and Connecticut; and a similar congress is projected among some of the Mid-western States. The eastern conference is considering the draft of a proposed compact on the regulation of child labour, and the subjects to be dealt with later include the regulation of hours of labour, industrial home work, safety standards, compensation for industrial accidents, control of employment offices and unemployment insurance. The *Times* points out that as compacts are ratified from time to time, an inter-State organization of some kind will be needed to administer them, probably an inter-State commission on which every participating State shall be equally represented. "Thus in time the country may become organized for certain purposes into regional groups of States, with regional administrative authorities established by inter-State agreement. Such regional organization may prove a successful method of dealing with many questions involving several States but not the whole nation, and thus reduce demands for action at Washington."

#### **Collective agreement for Quebec clothing industry.**

The last issue of the *LABOUR GAZETTE* noted (page 1147) that employers and workers in the clothing industry in Quebec had applied for the extension of an agreement under the Collective Labour Agreements Extension Act. The *Canadian Textile Journal*, December 14, 1934, stated that the application, "calling for regulation of working hours and minimum wage rates in the Quebec clothing industry ranks as the most important document yet devised for industrial regulation in this country. That the document is representative of a preponderating majority of the industry there can be no doubt, for it is signed by employers responsible for 75 per cent of clothing trade production in Quebec and by agents of organized labour representing 70 per cent of the working force of the clothing industry. Altogether approximately 7,000 workers are involved in the application as well as approximately 85 per cent of the capital involved in the industry. . . .

"In these columns", The *Textile Journal* continues, "during the past two years we have repeatedly drawn attention to bitter competi-

tion in the men's and boys' clothing trade, with its consequent capital losses and uneconomically low wage rates, and have advised swift and decisive action for trade regulation. With a healthy men's and boys' clothing trade in Quebec province the entire trade in Canada would be on a sound basis, and the chief difficulty in Quebec has been and is to-day the competition between Montreal and rural shops and the wide disparity in production costs between the two areas, as well as bitter competition between clothing contractors resulting in general price depression during periods of work scarcity.

"The new agreement, drafted by the majority of employers and employees in the industry, provides for a standard 44 hour week, with a time and a half allowance for overtime, and minimum wage rates which are 10 to 18 per cent lower than those now effective in union shops in Montreal. To prevent the union wage level in Montreal from falling, current agreements are to remain effective, so that the union rate in Montreal will remain unchanged, but under the terms of the agreement rural shops will in most cases be compelled to increase their wage level. The net effect will be an equalisation of wage costs between Montreal and outside shops, with provision made for prosecuting both contractors and manufacturers for whom they are working, should the contractors' wage level be below the minimum levels decreed."

#### **Unemployment insurance proposals in United States.**

Unemployment insurance in the United States, without the requirement of any employee contribution, was recommended to the President's Committee on Economic Security by its Advisory Council in a report published on December 16. The survey advocates a Federal-State unemployment insurance program, with the imposition of a 3 per cent tax on payrolls, beginning in 1936. It was reported from Washington that the essential features of these recommendations might be embodied in the legislation for consideration by the next Congress. The Advisory Council rejected a plan providing that employers and employees each contribute to the insurance fund, and by a 9 to 7 majority accepted the 3 per cent tax on payrolls on the ground that it would be passed on to consumers and the beneficiary would pay his share on the tax that would be attached to the article he purchases.

"We regard it as settled," the report states, "that unemployment compensation should at this time be developed along Federal-State lines. In this co-operative undertaking the

Federal Government must assume the leadership. It should make it easier for the States to act through removing those disadvantages in interstate competition which are always raised against purely State legislation that involves costs to industry. This knot should be cut by requiring industries in all States, whether the States enact unemployment compensation laws or not, to make uniform payroll contributions.

"The Federal Government should enact a law prescribing minimum standards, and should actively assist the States in preparing that legislation and in getting their plans in operation. The Federal Government should set up an administrative authority and should, as suggested by the President, assume responsibility for the safeguarding of all unemployed reserve funds and use these funds to promote stabilization. The States, for their part, must assume responsibility for State administration. Unemployment compensation benefits must, necessarily, be locally administered and no large bureaucracy in Washington need be created if this principle is observed."

#### **President Roosevelt's plan for public works.**

In his annual message to Congress on January 4, President Roosevelt proposed the revision of the entire federal relief structure, including the abandonment of direct relief and the adoption of a large public works plan, to be undertaken "within the sound credit of the government." This work, he said, will cover a wide field, including clearance of slums, which, for adequate reasons, cannot be undertaken by private capital; rural housing of several kinds, where, again, private capital is unable to function; in rural electrification; the reforestation of the great watersheds of the nation; an intensified program to prevent soil erosion and to reclaim blighted areas; improving existing road systems and constructing national highways designed to handle modern traffic; elimination of grade crossings; extension and enlargement of the successful work of the civilian conservation corps; non-Federal work, mostly self-liquidating and highly useful to local divisions of government; and on many others which the nation needs and cannot afford to neglect.

The President proposed that the Government assure security of livelihood, security against hazards, and security of decent homes—"a program which, because of many lost years, will take many future years to fulfil." He said that the new work relief effort "fits logically and usefully into the long range permanent policy of providing the three types of security."

## Provincial Health Service in Quebec.

An account of public health and public charities in the Province of Quebec is contributed to the current issue of *Child and Family Welfare* (the official organ of the Canadian Council of Child and Family Welfare) by Dr. Alphonse Lessard, director of the Provincial Health Service. In 1922, the director states, "the old Board of Health made way for the Provincial Health Service, a permanent organization directly responsible to the provincial secretary, a change which gave an immediate and sustained impulse to the entire public health structure, and which has been reflected throughout the province.

"A great health authority," Dr. Lessard continued, "has enunciated the dictum that public health is purchased, and purchased with money. In 1921, the province's annual expenditure on public health totalled \$125,000.00—an objective slowly and painfully reached from \$25,000.00; then \$50,000.00; and then \$75,000.00. Now it approximates \$1,000,000.00.

"In 1926, with the generous assistance of the Rockefeller Foundation, the first county health units were established, and this wonderful system of public health services (of which examples are seen in the United States, in England and in France) has revolutionized rural health in our province. Thanks to this system, the general mortality has dropped from 15 per 1,000 in 1926 to 10 per 1,000 last year (1933), and the nightmare of our infant mortality rate has fallen in the last 8 years, from 142 per 1,000 living births to 94 in 1933. Mortality from contagious diseases has dropped 60 per cent, and it is to be hoped that we shall never repeat 1927's sad experience when 469 children died of diphtheria, for systematic immunization in Health Unit areas under our medical officers has brought a drop to a number of 100 for the whole province. Tuberculosis mortality last year dropped by 6 points, and we can confidently envisage the day when this national social plague will no longer strike through our population as it did years ago. Investigation services are organized over a broad front, and side by side with the district dispensaries, mobile clinics with chest diagnosticians tour the municipalities, served by the health units, seeking contacts, organizing preventive work, and generally providing health propaganda along lines unique to this province.

"Added to these measures, there is the Grancher system of child placement in families, borrowed in 1929 from France, whereby children exposed to tuberculosis in-

fection in the homes of our large urban centres are placed in selected rural homes. The system has been but partially developed yet, due to budget reductions forced by present financial conditions. If the anti-tuberculosis machinery is not yet complete, yet we are well on the highway towards it, and success will wait upon determination and persistence."

## Test of health insurance in Manitoba.

The Manitoba Department of Health has decided to make a practical test of health insurance, to continue for two years, by establishing in the municipality of Woodworth, a community of 2,000 residents, a scheme which contains the following provisions:—(1) complete medical service, including surgery, hospitalization and cost of prescriptions; (2) payment of doctors' fees and hospital charges through taxation on property and a poll tax; (3) right of the individual, within reasonable limits, to choose his own physician or surgeon and select the hospital to which he desires to go for treatment; (4) maintenance of competition between doctors, continuance of the high standard of medical care and protection against racketeering by doctors.

The scheme, which is on a voluntary basis, will be started next spring, subject to the approval of the municipal council. Dr. F. W. Johnson, Deputy Minister of Health, its author, has had a long experience as a country doctor.

## Supplements published with this issue of Labour Gazette.

Two supplements will appear shortly after this issue of the LABOUR GAZETTE continuing the series on wages and on prices issued annually in January in recent years. The first is the eighteenth report in the "Wages and Hours of Labour" series giving information as to the year 1934, with comparative figures for 1933 and earlier years, and showing the wages and working hours of the principal classes of labour throughout the Dominion in various industries. The second supplement deals with the movement in retail and wholesale prices in Canada in 1934 and previous years; tables are also given showing the movement of prices in other countries throughout the world.

## Canadian employers and the I.L.O.

At a meeting of the Executive Council of the Canadian Manufacturers' Association, held in Toronto recently, a report on the 1934 Session of the International Labour Conference was submitted by the Industrial Relations

Committee of the Association. The following are the conclusions of this report:

"As regards the work of the International Labour Organization, generally, judging from the progress of ratification by the various countries of the Conventions passed at Geneva, and the reports (which are made each year) of the enforcement of the various national laws passed as a result of the Geneva Conventions, there seems no reason to doubt that valuable work is being done in the way of bringing the low labour standard countries up to something approaching a parity with the high labour standard countries, which has always, of course, been one of the main purposes of the International Labour Organization. It may further be observed that this year's Conference, like the Conferences of the last four years, was marked on the whole by a restraint and moderation on the part of the labour representatives, which in view of the strain and stress of the last five years was decidedly praiseworthy, and which is undoubtedly attributable in large part to the fact that as a result of meeting for the past fifteen years with the representatives of governments and industry, the workers have come to realize the economic and other difficulties confronting governments and employers in a way that would otherwise have been impossible."

#### **Test of consumers' co-operation at Hamilton, Ontario.**

LABOUR GAZETTE, November, 1934, page 987. Subsequently the Ontario Milk Control Board prohibited the payment of patronage dividends by co-operative dairies. Referring to the problem created for the co-operative movement by this action, the *Canadian Co-operator*, in its December issue, suggests that "a sensible and equitable solution of the dispute would be to follow the practice of the British Milk Marketing Board by permitting private distributors, if they so desire, to give by way of discount an amount equal to the purchase dividend declared by co-operative societies ..... If co-operative societies are to be denied the right to return to producers and consumers, in the form of patronage dividends, the savings made in milk distribution, a precedent will be created of the gravest possible significance to the future of the movement in Canada. If it is possible to establish that co-operative distribution may be legally prohibited as to one commodity, there is no reason why other profit-seeking private interests should not demand its extension to every necessity of life."

#### **Principles of workmen's compensation stated.**

general statement:

"Despite the best efforts of insurance companies, governments and humanitarian agencies for two decades, industrial accidents are not declining, are perhaps even increasing. Workmen's compensation is the modern method of indemnifying the victims of industrial injuries which recognizes these inevitable losses as a part of the cost of the productive system. Since individuals are not to blame, since prevention is impossible on any considerable scale, and since society demands machine production, society through workmen's compensation has assumed the cost of industrial injuries. In broadest principle then, workmen's compensation takes the burden of these losses from the workman and his family, and places it on the entire group of consumers. It makes no effort to find out *who* is to blame. If the injury occurs while the workman is on the job it is assumed that the injury was caused by the job. The workman need not prove that someone else was the cause of the injury; the employer need not prove that the workman himself was partly or entirely responsible. Shorn of the red tape of the courts, a simple speedy system of administration determines the fact of a compensable injury and the amount of the award. In exchange for the chance of an occasional large verdict, the worker gains certainty and prompt payment of medical and hospital benefits and of a modest weekly sum in lieu of lost wages. The employer gains freedom from damage suits and the good will of his personnel. The state and private charities gain by transferring to the consumer a cost which under the older system was assumed by public and private philanthropy. While the employer bears the immediate expense, he is merely society's agent and is expected to reimburse himself in the price of his product."

#### **Danger of the prevalence of Silicosis.**

Mounting costs of silicosis, a lung disease brought on by the inhalation of dust, threatens the ruin of many American industries through liability for damages arising from this occupational disease, in the opinion of F. Robertson Jones, of New York, general manager of the Association of Casualty and Surety Executives quoted in the *Literary Digest*, December 15. In a symposium on occupational diseases held by the American Society of Mechanical Engineers in New York, in December, Mr. Jones pointed out that this disease, which is accom-

The report of a committee appointed in 1933 by Governor Pinchot of Pennsylvania to study workmen's compensation in the State, contains the following general statement:

panied by growth of fibrous material in the lungs, appears to be practically incurable once it has progressed beyond a certain stage. The critical point is often reached without the knowledge of the victim. The malady comes on so gradually that no symptoms are observed until it is too late. The problem is therefore primarily one of prevention, mainly by machine and factory construction designed to eliminate dust. To a certain degree engineers have met the problem in some industries, but in many others, particularly the smaller industries, little or nothing has been done, and thousands of workers are still being exposed to silicosis without adequate protection.

**Relief labour  
producing  
consumption  
goods for  
unemployed.**

Various state relief administrations in the United States have recently experimented in the employment of "relief labour" to produce consumption goods for the use of persons on relief.

An account of this movement, contributed by the director of the charity organization Department of the Russell Sage Foundation, appeared in the *Survey* (New York), December, 1934. Mattress factories and canning plants for surplus products, it is stated, are the most frequently found, but Alabama, Illinois, Kentucky, Louisiana, Massachusetts, Michigan, Mississippi and Tennessee have also plans in operation for "production for use" on a wider scale in factories or mines.

The writer gives details of the undertakings of the Ohio Relief Commission in this direction. A subsidiary corporation, the Ohio Relief Production Units, Incorporated, was established last June, the Commission financing the operations of the Corporation by grants according to its requirements. Production from surplus commodities—such as mattresses from surplus cotton, and canned meat from cattle in the drought areas—is not included in the undertakings of the Corporation, but is carried on by other branches of the Relief Commission. The Corporation began operations in August by opening garment factories, eleven of these being active by November. Another factory is ready to turn out 4,500 blankets monthly, as well as heavy materials for overcoats, and another to manufacture underwear and pyjamas. "Up to October 27, the six units which had by that time been able to turn out goods had produced 2,012 articles of furniture with a sales value of \$2,043; 970 stoves valued at \$6,172, and clothing of all descriptions valued at \$26,165—a total of \$34,380. Operating costs in the same six units (including initial investments for repairs and equipment of \$10,600) had been \$112,600 for raw materials and operation of plant, while \$31,400 had been paid for wages.

"The main departments of Relief Production Units are: management which secures factories and exercises all general functions; planning, which ascertains demand, determines the kind, amount, and price of goods to be manufactured, and prepares production-schedules; production, which secures and operates the factories; accounting; distribution. The production and distribution departments approve designs submitted by the planning department; and jointly place final approval on completed articles."

The nineteenth annual convention of the Association of Governmental Officials in Industry of the United States and Canada held recently in Chicago, was attended by three Canadian representatives in the persons of Hon. C. J. Arcand, Minister of Labour for Quebec; Mr. Gerard Tremblay, Deputy Minister of Labour, Quebec; and Mr. A. W. Crawford, chairman of the Ontario Minimum Wage Board. All three participated in the discussion on minimum wage laws. Other topics under discussion were: new labour legislation, analysis of accidents, unemployment insurance, women in industry, and child labour.

Of the total population of Great Britain in 1931, approximately 29,900,000 were between 16 and 64 years of age. Of the persons within these limits of age, about 19,400,000 were "gainfully occupied," of whom about 12,500,000 were insured against unemployment under the Unemployment Insurance Acts. The total number of persons, aged 16-64, insured against unemployment at the beginning of July, 1934, is estimated at 12,690,000 in Great Britain and Northern Ireland. The total number of insured persons aged 16 years and over in employment in Great Britain and Northern Ireland rose from 10,188,000 in 1923 to 11,062,000 in 1927. The number aged 16 to 64 rose from 10,745,000 in 1927 to 10,836,000 in 1934. These figures take no account of absences from work through sickness, holidays, or other temporary circumstances or through participation in trade disputes.

By an Order in Council published as a supplement to the *Canada Gazette*, January 1, 1935, approval was given to the scheme to regulate the marketing of milk and products processed or manufactured wholly or chiefly from milk, and produced in the Lower Mainland of British Columbia. The provincial order which established this scheme under the provisions of the Natural Products Marketing Act, was noted in the *LABOUR GAZETTE*, December, 1934, page 1079.

## PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING THE MONTH OF DECEMBER

**A**N application for the establishment of a Board of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act was received in the Department of Labour during December from clerks, checkers, sealers, stowers and truckers employed by the Canadian Pacific Railway Company at Winnipeg, and being members of the International Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. Two hundred employees are stated to be directly affected by the dispute and 1,000 indirectly. The applicants claim restoration to employees who participated in the general strike at Winnipeg in 1919 of seniority rights prior to the strike. The matter of the application had been taken up with the employing company at the close of the month.

An interim report was submitted to the Minister of Labour on December 31 by the Board of Conciliation and Investigation

established\* to deal with two disputes:—(1) between the Western Stevedore Company, Limited, and certain of its employees at Fort William, Ontario, being truckers, stowers, loaders, sealers, etc., members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees; and (2) between the Canadian National Railways and the same class of employees at Port Arthur, Ontario, members also of the Brotherhood of Railway and Steamship Clerks. Three hundred and twenty men at Fort William and 400 men at Port Arthur were stated to be directly concerned. Each dispute related to the employees' demand for an agreement embodying increased wages, shorter hours and improved working conditions, as well as their request that an officer of the union be permitted to conduct negotiations on behalf of the employees. It will be noted that the Board has adjourned for a period of six weeks to enable direct negotiations to proceed.

### Report of Board in Dispute between Western Stevedore Company and Canadian National Railways and their Waterfront Freight Handlers at Fort William and Port Arthur

*IN THE MATTER of the Industrial Disputes Investigation Act and of a dispute between The Western Stevedore Company and the Canadian National Railways, (Employer); and certain of their employees being truckers, stowers, loaders, sealers, etc., members of the International Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, (Employees).*

Honourable Wesley A. Gordon, K.C., M.P.,  
Minister of Labour,  
Ottawa.

DEAR SIR,—This Board was duly constituted by your orders dated 5th November and 8th November, 1934, and met at Fort William, Ontario, and took evidence and listened to argument on the 22nd, 23rd, 24th and 26th of November, 1934.

There were two wage disputes mentioned in the documents constituting the Board. One concerned the employees of the Canadian National Railway at Port Arthur and the other the employees of the Western Stevedore Company at Fort William, all these employees being engaged in the loading and unloading of vessels at these lake ports. Some discussion took place as to the advisability of consider-

ing these cases separately and making separate reports. The Board however decided to take the evidence as applicable to both cases and to later determine whether the reports should be divided or not.

The first difficulty which the Board encountered was with respect to the right of those who appeared to represent the employees in the presentation of their cases. Two large organizations represented in person or by letter and telegram, claimed this right. The Board decided that it was their duty to hear the matters as submitted by those present, reserving the question of the right to negotiate agreements until later, as it appeared that the employees were sufficiently represented before the Board to enable the Board to proceed with the different questions in dispute.

Evidence was taken on some points which were not in serious dispute and upon others which were contested. When all the evidence offered had been taken, the Board adjourned to meet at the call of the Chairman.

During the intermission letters were written by members of the Board and consultations held by the interested parties in an effort to effect an agreement, which would be acceptable to all parties.

\* LABOUR GAZETTE, November, 1934, page 991.

The Board was thereafter convened to meet at Ottawa on the 28th of December, 1934, at which meeting we are happy to state that it was agreed, and we have recorded it in our minutes that the Railway Company and the Western Stevedore Company would sit down with their own employees in an honest endeavour to work out an agreement, which it is hoped will be of advantage to both of them. It was further agreed that these local employees may have the advice and assistance of men of wider experience than themselves, whom they may choose for the purpose. It was also agreed that if and when an agreement was reached it will be made and signed by the officers of the local organization and not by or on behalf of any labour organization. We are pleased to report that there was no difference in opinion on this point, and that all those who represented conflicting interests have agreed to this course of procedure.

Cconciliation is the real object of a Board under the Industrial Disputes Act and if the parties cannot be brought together, a report whether unanimous or not, sometimes adds fuel to the flames and prepares all parties for a strike or a lockout. With this in view the members of the Board, without in any way giving up their individual opinions, which they will set forth if obliged to do in a final

report, have decided to adjourn for six weeks to enable the direct negotiations between the parties, to take place. If the parties cannot arrive at a working agreement the Board will then proceed to make its report to you on the whole situation, and will make recommendations for the settlement of the dispute according to the merits and the substantial justice of the case.

We commend the very fine spirit which has been displayed by all parties before us. No hasty, angry or improper word has been spoken, and both sides have, while very properly maintaining their positions, shown a desire for conciliation and agreement, which has impressed the members of the Board most favourably. So long as we can remain mediators we are satisfied to carry on, but we feel very confident that if the parties will meet together in the same spirit in which they met before the Board, an agreement satisfactory to all of them will be consummated without further intervention by us.

Your very truly,

(Sgd.) R. M. DENNISTOUN,  
Chairman.

(Sgd.) H. P. HILL,  
Representing Employers.

(Sgd.) MARCUS HYMAN,  
Representing Employees.

## STRIKES AND LOCKOUTS IN CANADA DURING DECEMBER, 1934

THE following table shows the number of disputes, workers involved and time loss for December, 1934, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Dec. 1934.....	8	400	3,523
*Nov. 1934.....	13	1,542	17,182
Dec. 1933.....	16	3,902	55,477

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time is frequently not received until some time after its commencement.

The number of disputes recorded for December, as well as the number of workers involved and the time loss incurred, showed a substantial decrease from the figure for November and also from that for December, 1933. The disputes involving several hundred loggers in the Algoma district of Ontario and some four hundred coal miners at Cumberland, B.C., which had caused more than one-half the time loss during November had terminated before the beginning of December and only three small strikes commenced during the month. The substantially higher figures for December, 1933, were due to four disputes involving approximately 3,000 loggers in northern Ontario and Quebec with a resulting time loss of 33,500 working days in addition to a strike of 700 woollen factory workers at Hespeler, Ont., during which 10,000 days' time loss was incurred.

Five disputes, involving 338 workers, were carried over from November, including a strike of shoe factory workers at St. Tite, P.Q., and a strike of dress and shirt factory workers at Toronto, Ont., both of which commenced during November but were not reported in time for inclusion in the table in the December

LABOUR GAZETTE. Three disputes commenced during December. Of these eight disputes, seven terminated during the month, two resulting in favour of the employers concerned, two in favour of the workers involved, while compromise settlements were reached in three cases. At the end of December, therefore, there was only one dispute in progress recorded as a strike or lockout, namely; compositors, London, Ont.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not declared terminated. Information is available as to five such disputes, namely: photo engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., May 4, 1931, one employer; motion picture pro-

jectionists, Toronto, Ont., July 11, 1932, two employers; moulders, Peterborough, Ont., February 27, 1934, one employer (incorrectly reported as lapsed by the end of November); shoe factory workers, Preston, Ont., September 13, 1934, one employer; and loggers, Port Alberni, B.C., October 10, 1934, one employer. The disputes involving shoe factory workers commencing July 25, 1934, in one establishment in New Toronto, Ont., and paper mill workers, commencing May 30, 1934, in one establishment at Dolbeau, P.Q., carried in the above list for some months, are reported by the unions concerned to have been terminated during December, and have consequently been removed from the list.

Disputes involving men on unemployment relief work, who are not paid wages but receive subsistence for which work is performed or may be required, are not included in the record, no relation of employer and employee being involved.

### STRIKES AND LOCKOUTS IN CANADA DURING DECEMBER, 1934\*

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
<b>(a) Strikes and Lockouts in Progress prior to December, 1934.</b>			
LOGGING— Loggers, Sioux Lookout, Ont...	45	400	Commenced Nov. 1, 1934; for increased wages, reduced hours and improved conditions; terminated Dec. 11, 1934; compromise.
MANUFACTURING— Boots and Shoes— Shoe factory workers, St. Tite, P.Q.	105	105	Commenced Nov. 23, 1934; against alleged discharge of workers for union activity; terminated Dec. 1, 1934; in favour of employer.
Textiles, Clothing, etc.— Dress and shirt factory workers, Toronto, Ont.	80	800	Commenced Nov. 16, 1934; for increase in piece rates and recognition of union; terminated Dec. 12, 1934; in favour of workers.
Other Wood Products— Shingle weavers, Eburne, B.C.	35	245	Commenced Nov. 8, 1934; for increased wages; terminated December 8, 1934; compromise.
Printing and Publishing— Compositors, London, Ont.....	73	1,898	Commenced Mar. 1, 1934; for renewal of union agreement; untermiated.
<b>(b) Strikes and Lockouts Commencing during December, 1934.</b>			
LOGGING— Loggers, The Pas, Man.....	28	28	Commenced Dec. 15, 1934; for increased wages; terminated Dec. 15, 1934; in favour of employer.
MANUFACTURING— Boots and Shoes— Shoe factory workers, Winni- peg, Man.	10	35	Commenced Dec. 19, 1934; against discharge of workers and for wage adjustment; terminated Dec. 22, 1934; compromise.
TRANSPORTATION— Water— Longshoremen, Vancouver, B.C.	24	12	Commenced Dec. 6, 1934; for increased wages; terminated Dec. 6, 1934; in favour of workers.

\*In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which working time was lost to an appreciable extent.

A dispute involving shoe workers in one establishment at Toronto, Ont., has been reported. It is stated that the factory was closed down on October 10 and that a ten per cent reduction in wages being announced by the employer, the employees declared a strike on December 5; whereupon the employer closed the factory and transferred operations to St. Thomas, Ont. The Shoe and Leather Workers' Industrial Union proceeded to organize the employees taken on at the establishment in St. Thomas but no strike there has been reported.

The following paragraphs give particulars regarding certain disputes in addition to the information in the tabular statement.

**LOGGERS, SIOUX LOOKOUT, ONT.**—A settlement of this dispute, on December 11, has been reported, the forty-five loggers on strike since November 1 returning to work on December 12, a compromise on the rates in dispute having been agreed upon as a result of negotiations. The strikers were successful in having the rates for board reduced from 90 cents per day to 75 cents and in securing the \$35.00 per month with board demanded for men on monthly rates, but agreed to accept 4½ cents each for eight foot logs and 9½ cents each for sixteen foot logs, the employer conceding the right to form camp committees.

**SHOE FACTORY WORKERS, ST. TITE, P.Q.**—Demanding the reinstatement of two of their number alleged to have been dismissed for membership in the National Syndicate of Shoe Workers of St. Tite, 105 employees of one firm ceased work on November 23. Information as to the cessation however, was not received in time for inclusion in the December issue of the LABOUR GAZETTE. The matter in dispute was referred to a Council of Arbitration under the Quebec Trade Disputes Act which rendered a decision in favour of the employer involved, stating that the evidence did not conclusively indicate that the men were discharged because of their connection with the union. Work was resumed on December 3, 1934.

**DRESS AND SHIRT FACTORY WORKERS, TORONTO, ONT.**—As noted in a paragraph in the December issue of the LABOUR GAZETTE, employees of one firm in Toronto, Ont., engaged in the manufacture of both dresses and shirts ceased work on November 16 to enforce a demand for an increase from \$1.30 per dozen dresses to \$1.50 for dressmakers working on cotton goods, a demand also being made for recognition of the Industrial Union of Needle Trades Workers. A representative of the Ontario Department of Labour acted as mediator in the dispute, and work was resumed on

December 13, an agreement having been signed with the union providing for the increase demanded and reducing the hours per week from forty-eight to forty-four.

**SHINGLE WEAVERS, EBURNE, B.C.**—The demands of the thirty-five shingle weavers, employed by one firm at Eburne, B.C., that the minimum wage scale be observed and the rates for board reduced are reported to have been conceded by the employer early in December, work being resumed about December 10. The 40 cent rate for common labour also demanded at the commencement of the strike on November 8 was, however, not conceded.

**LOGGERS, THE PAS, MAN.**—A number of the employees in one camp of a lumber company ceased work on December 15 demanding higher piece rates and a higher minimum per month, being replaced almost immediately. It is reported that the wages averaged \$30.00 per month and board, the minimum rate per month being \$15.00 with board.

**SHOE FACTORY WORKERS, WINNIPEG, MAN.**—Following the discharge of five employees, about December 19, as a result of a dispute as to piece rates set by the employer for a new job, five other employees ceased work and the dispute was taken up with the provincial Deputy Minister of Labour by the Trades and Labour Council on behalf of the Boot and Shoe Workers' Union. The mediation of the Deputy Minister resulted in a settlement under which all workers were reinstated and an adjustment in the piece rates was made, work being resumed about December 24. On November 5 and December 3 the employees had ceased work for a short period owing to this dispute.

**LONGSHOREMEN, VANCOUVER, B.C.**—Twenty-four longshoremen employed to handle cargo for one steamship company at Vancouver, B.C., ceased work on December 6 demanding an increase of 5 cents per hour to 80 cents per hour with \$1.00 per hour for overtime. After one-half day the company agreed to raise the rate on the job affected and work was resumed.

At a meeting recently of the Committee appointed by the Conference of Co-operative Associations of Saskatchewan to investigate further co-operation between consumers and producers co-operatives the opinion was expressed by the Committee that co-operative organizations should link up with the Co-operative Union of Canada in order to take advantage of the services offered by that organization on behalf of the Co-operative Movement generally.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue of February, 1934, in the review of Strikes and Lockouts in Canada and Other Countries, 1933. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates. Statistics given in the annual review and in this monthly article are taken as far as possible directly from the government publications of the various countries concerned, while information as to particular disputes is obtained for the most part from newspaper reports.

### Great Britain

The number of disputes beginning in November was 35, and 17 were still in effect from the previous month, making a total of 52 disputes in progress during the month, involving 11,100 workers with a time loss of 71,000 working days for the month. Of the 35 disputes beginning in November, 7 were over demands for increases in wages, 3 over proposed wage reductions, 7 over other wage questions, 11 over questions respecting the employment of

particular classes or persons and 7 over other questions. During November, settlements were reached in 38 disputes, of which 12 were settled in favour of workers, 14 in favour of employers and 12 ended in compromises.

### Brazil

A strike of postal and maritime workers is reported to have begun at Sao Paulo and Rio de Janeiro towards the end of December resulting in the tying up of mail and of coastal shipping.

### Germany

The number of disputes reported for the first three months of 1933 was 69, involving 10,475 workers with a time loss of 96,460 working days. Since April, 1933, no stoppages of work due to industrial disputes have been officially reported.

### United States

The strike of about 25,000 silk and rayon dyers at Paterson, New Jersey, which began October 24 and was mentioned in the last two issues of the LABOUR GAZETTE, was terminated during the first week of December by a compromise settlement whereby hours were reduced from 40 to 36 per week, hourly wage rates for men increased from 57 to 66 cents, and an agreement made that jobs now held by union members are to continue to be held by union members and that there are to be no strikes or lockouts for two years, all disputes to be handled by a joint board.

## The Prevention of Lead Poisoning

A bulletin on lead poisoning, recently issued by the Division of Industrial Hygiene, Ontario Department of Health, contains the following recommendations for the control of this industrial disease:

"The control of lead poisoning is mainly the control of dust and fumes and therefore rests primarily in the hands of the employer. The production of dust and generation of fumes should be prevented as far as possible. Suction equipment should be used to remove fumes and dust at their point of origin. It must be remembered that air currents for the control of dust and fumes are only of value when they are properly directed and controlled. Buildings used should be airy and clean, and dust should not be allowed to accumulate on ceilings, girders, shafts, floors, etc. The use of vacuum cleaners instead of brooms is important, and frequent hosing of

floors with water is necessary. Processes involving dust and fumes should be isolated from the general work rooms. Proper lunch-room, washing and locker accommodation should be provided and working clothes should be washed frequently. Smoking and chewing and eating at work places should be prohibited. Personal cleanliness of the worker is important. Suitable masks should be provided for the workmen. Masks supplying outside clean air are to be preferred. It is also desirable that men exposed to lead should be examined periodically by a physician familiar with lead poisoning. This examination should include a simple microscopic examination of the red blood cells as these cells show characteristic changes which permit early recognition of trouble before actual poisoning occurs."

## DEPARTMENT OF LABOUR OF CANADA

## Annual Report for Fiscal Year ending March 31, 1934

THE report of the Department for the fiscal year ending March 31, 1934, recently published, outlines the activities of the Department in connection with the duties that have been assigned to it from time to time by Dominion legislation. The following Acts were administered by the Department during the period covered by the report:—

*Labour Department Act* (R.S.C., 1927, chap. 111), which directs that statistical and other information of labour interest shall be collected and published, and research conducted into important industrial questions;

*Conciliation and Labour Act* (R.S.C., 1927, chap. 110), under which the services of departmental officers stationed at Ottawa and various points in Canada are utilized in the adjustment of labour disputes;

*Industrial Disputes Investigation Act* (R.S.C., 1927, chap. 112), which provides for the establishment of Boards of Conciliation and Investigation in connection with disputes affecting mines and public utility industries;

*Government Annuities Act* (R.S.C., 1927, chap. 7, as amended in 1931 by chap. 33, 21-22 Geo. V.) which authorizes the sale of Government annuities;

*Employment Offices Co-ordination Act* (R.S.C., 1927, chap. 57) under which, in co-operation with various provincial governments, free public employment offices are maintained in the principal industrial centres;

*Technical Education Act* (R.S.C., 1927, chap. 193, as amended in 1929 by chap. 8, 19-20 Geo. V.) which sanctions the payment of grants to the provinces for the purpose of promoting and assisting technical, vocational and industrial education;

*Combines Investigation Act* (R.S.C., 1927, chap. 26), which provides means for the investigation of combines, monopolies, trusts and mergers which are alleged to have operated or are likely to operate to the detriment or against the interest of the public, whether consumers, producers or others;

*Old Age Pensions Act* (R.S.C., 1927, chap. 156, as amended in 1931 by chap. 42, 21-22 Geo. V.) which makes provision for a Dominion-Provincial system of non-contributory pensions to needy persons over seventy years of age;

*The Unemployment Relief Act, 1930* (21 Geo. V, chap. 1), *The Unemployment and Farm Relief Act, 1931* (21-22 Geo. V, chap.

58), *The Unemployment and Farm Relief Continuance Act, 1932* (22-23 Geo. V, chap. 13), and *The Relief Act, 1933* (23-24 Geo. V, chap. 18) which authorizes the granting of aid for the relief of unemployment.

Another task of the department relates to the administration of the Fair Wages Policy of the Government of Canada based on a resolution of the House of Commons of 1900, and of the *Fair Wages and Eight Hour Day Act, 1930* (20-21 Geo. V, chap. 20), which are designed for the protection of the workmen employed on Dominion Government contracts and on works aided by grants of public funds.

The Minister of Labour is vested with administration of the *White Phosphorus Matches Act*, R.S.C., 1927, chap. 128. There were no claims of alleged infractions of this law during the year and there is, therefore, no formal report of proceedings in the present report.

In addition to the work involved in the administration of the various statutes and ordinances outlined above, the Department of Labour is charged with certain duties arising out of the relations of Canada with the International Labour Organization of the League of Nations.

In a brief introduction Mr. W. M. Dickson, Deputy Minister of Labour, calls attention to the evidence of improvement in Canada's economic condition during the year under review. Official figures on unemployment among members of trade unions and the index numbers covering employment in general industry show that the number of unemployed persons throughout Canada diminished to quite an extent during the fiscal year starting with April 1, 1933. At March 31, 1933, according to trade unions reporting regularly to the Department of Labour, 25.1 per cent of their membership were unemployed. This percentage of unemployment had decreased to 19.5 per cent by March 31, 1934. From April 1, 1933, to March 31, 1934, the employment index numbers compiled by the Dominion Bureau of Statistics indicated an improvement from 76.0 points to 91.3 points, a net reported gain in the general level of employment throughout Canada of approximately 20 per cent. These index numbers are based upon the monthly reports of over 8,000 reporting firms, which added 149,000 persons to their working force during the period, indicating an estimated increase of something like 300,000 employed workers in the country as a whole.

### Labour Department Act

The Labour Department Act, under which the Department of Labour operates, provides that, with a view to the dissemination of accurate statistical and other information relating to conditions of labour, the department shall "collect, digest, and publish in suitable form statistical and other information relating to the conditions of labour, shall institute and conduct inquiries into important industrial questions upon which adequate information may not at present be available, and issue at least once in every month a publication to be known as the **LABOUR GAZETTE**, which shall contain information regarding conditions of the labour market, and kindred subjects, and shall be distributed or procurable in accordance with terms and conditions in that behalf prescribed by the minister."

In accordance with this provision, statistical and other information relating to labour conditions has been collected and analysed by the department since its establishment in 1900 and published in the **LABOUR GAZETTE**. In addition to the monthly publication of the **LABOUR GAZETTE**, which was one of the original functions of the department, a comprehensive annual report on Labour Organization in Canada is compiled and published by its Labour Intelligence Branch. The department also issues annually a report on Labour Legislation in Canada, containing the text of labour laws enacted by the Parliament of Canada and by the provincial legislatures. A complete reference library on labour and kindred subjects is maintained by the department and serves as a centre for its research activities.

Statistical data regarding employment is collected and compiled by the Employment Service Branch in accordance with the provisions of the Employment Offices Co-ordination Act.

Statistical and other information as to strikes and lockouts, changes in prices and the cost of living, wages and hours of labour, industrial agreements and industrial accidents is collected and compiled by the Statistical Branch of the department and published in the **LABOUR GAZETTE**, or in special supplements thereto. The information as to wages is used also in connection with the administration of the Fair Wages Policy in Dominion Government Contracts, and for the determination of wages for certain classes of Dominion Government employees on prevailing rates under the Civil Service Act, data being furnished to the various departments for this purpose as required. The information collected and compiled is further used in con-

nection with the settlement of industrial disputes and negotiations for agreements as to wages and working conditions not only by conciliation officers of the department and Boards of Conciliation and Investigation under the Industrial Disputes Investigation Act, but also by employers and employees who secure on request, regularly, or from time to time, special compilations for this purpose. The department also receives numerous requests for such information from persons interested in the establishment or development of industries and those engaged in the study of labour and social problems.

### Conciliation and Labour Act

During the fiscal year ending March 31, 1934, the services of the Department of Labour were utilized in connection with the adjustment of a number of labour disputes. In some of these cases strikes or lockouts had already occurred, and in others cessation of work appeared to be imminent, or there was difficulty in carrying on negotiations in connection with wages and working conditions. The proceedings were under the provisions of the Conciliation and Labour Act, which empowers the minister to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or an arbitrator when requested by the parties concerned. In some disputes occurring in industries coming within the scope of the Industrial Disputes Investigation Act, namely, mines and public utilities, preliminary inquiries by officers of the department resulted in the settlement of the matters in dispute without the necessity of the establishment of Boards of Conciliation and Investigation under that statute.

The Department of Labour has on its staff conciliators and mediators who are stationed at Vancouver, Toronto, Ottawa, and Montreal. The territory of the officer resident in Vancouver comprises the four western provinces. The conciliation officer resident in Toronto confines his activities to Ontario, while the officer in Montreal covers the province of Quebec and the Maritime Provinces. The headquarters of the Chief Conciliation Officer are at Ottawa.

These officers are also charged with certain duties arising out of the administration of the Fair Wages Policy applying to contracts let by the Dominion Government and to works aided by federal funds.

The report contains a list of the more important cases in connection with which mediation work was performed during the year by the Department on request of one or both

parties to the disputes. These cases indicate the good results that are being obtained by this service (Similar lists were published in the *LABOUR GAZETTE*, April, 1934, page 313; and December, 1933, page 1157).

### Fair Wages Policy

During the fiscal year under review the Department of Labour prepared fair wages conditions for use in connection with 123 contracts which were to be executed by various departments of the Government as follows: Canadian Radio Broadcasting Commission, 1; Fisheries, 2; Marine, 2; National Defence, 2; Public Works, 106; Railways and Canals, 1; and Royal Canadian Mounted Police, 9.

Labour conditions were also prepared by the Department of Labour for insertion in fourteen contracts which were to be awarded by certain of the Harbour Commissions for works aided by Dominion public funds.

The Post Office Department also awarded twenty contracts in connection with which the rates of wages and hours of labour to be observed by the contractors were submitted to the Department of Labour for approval or otherwise.

In addition to the foregoing, a number of contracts were placed during the year by the Post Office Department and by the Departments of National Defence, Indian Affairs and Public Works for the manufacture of fittings, clothing and other classes of supplies, which contracts are subject to the "B" Conditions of the Fair Wages Order in Council. The Department of Labour co-operated with these other departments in ensuring the observance of the labour conditions in question.

Fair wages officers have been employed by the Department of Labour since the inception of the Fair Wages Policy in 1900, to prepare fair wages schedules as required and to assist in the adjustment of complaints and disputes arising from time to time as to the proper rates of wages and labour conditions observable under the terms of Government contracts. These officials are stationed at Vancouver, Toronto, Ottawa, and Montreal, and in addition to their duties as fair wages officers, act as conciliators and mediators in connection with industrial disputes which are brought to the attention of the Department.

A number of complaints were received during the year of alleged non-compliance with the labour conditions of Government contracts and also of contracts aided by Dominion public funds. These complaints were in all cases investigated by the Department of Labour and, where they were found to be

justified, the contractors were required to make proper settlement with the workmen concerned.

### Industrial Disputes Investigation Act

This section of the report constitutes the twenty-seventh annual report of the Registrar of Boards of Conciliation and Investigation, covering proceedings under the Industrial Disputes Investigation Act, for the fiscal year ending March 31, 1934.

Applications for the establishment of Boards of Conciliation and Investigation received during 1933-1934 numbered seventeen; twenty disputes, however, figure in the record, proceedings having been continued over from the preceding fiscal year in three cases. Over 48,000 employees were directly concerned in these disputes, which were distributed amongst different industries as follows: steam railways, five; street and electric railways, four; shipping, four; telegraphs, four; and light and power, three. Eleven boards were established, two of which dealt with two applications each. All but three of these boards reported during the fiscal year. Reports were received also from two boards established during the preceding period. No interruption of work occurred following the award of a Board of Conciliation and Investigation.

Of the ten boards which filed their reports during the fiscal year, five were successful in securing signed agreements between the disputing parties. In the case of one board which dealt with two applications, the unanimous recommendations concerning the wage rate of one group of employees was accepted by the parties concerned; the Majority findings of the board respecting the wage rates and conditions of the other group of employees were rejected by them and this phase of the dispute was referred to a tribunal appointed by the provincial Government. Although the unanimous recommendations of one board and the majority findings of three boards were rejected by one or other of the parties concerned, settlements were subsequently effected in three cases as a result of renewed negotiations and no strike occurred in the fourth instance.

In addition to its application to industrial disputes in mines and public utility industries coming within the legislative authority of the Parliament of Canada, the Industrial Disputes Investigation Act is operative in respect to similar disputes falling within the exclusive legislative control of all of the provinces with the exception of Prince Edward Island, legislation having been enacted by the provincial legislatures declaring such disputes subject to the Dominion statute. Four boards established during the year came within this

category. Prince Edward Island, which is primarily an agricultural province, is not disturbed to any extent by industrial disputes and has not legislated on the subject.

All reports and minority reports made by boards or members of boards established under the provisions of the Industrial Disputes Investigation Act were, as required by the statute, published in the *LABOUR GAZETTE*, the official monthly journal of the Department of Labour.

Boards were not granted in the case of five applications before the department during the fiscal year, mediation by departmental officials having resulted in the settlement of four of these disputes, and one application being under consideration when the fiscal year closed.

Analysed by causes, fifteen of the twenty applications dealt with during the year related to disputes arising out of wage reductions proposed by employers, the suggested decreases being in the majority of cases additional to reductions already effected during the past three years. Requests of employees for increased wages and changed working conditions were stated to be the cause of two disputes, the proposed increase in one case constituting restoration of rates perviously reduced. Of the three remaining disputes, two related to certain conditions of employment and the third to the alleged unjust suspension and dismissal of an employee.

Applications under the terms of the Industrial Disputes Investigation Act, from its inception on March 22, 1907, to March 31, 1934, numbered 802, and Boards of Conciliation and Investigation were established in 536 cases. A few of these boards dealt with two or more applications. The cases in which boards were not granted were either settled by agencies other than those provided by the Industrial Disputes Investigation Act, or it was found that the machinery of the statute could not be utilized. In only thirty-eight cases was the cessation of work which threatened not averted, or the strike which had been already entered upon not ended, as a result of board procedure.

The report contains tables showing proceedings by industries concerned during the fiscal year 1933-34, and from March 22, 1907, to March 31, 1934; and the number of disputes dealt with by fiscal years 1907-34, and by calendar years, 1907-34, and summarizing the operations under the statute for the fiscal year ending March 31, 1934.

#### Government Annuities Act

The number of new contracts issued by the Annuities Branch for the fiscal year 1933-34 was 2,412. The largest number of contracts

in any previous year was in 1930-31, when 1,772 new contracts were issued. The receipts for the year under review were \$7,071,439, or 66 per cent more than the largest previous amount, viz., \$4,272,418.87 in the year 1928-29. It is obvious from the foregoing figures that the value of a Canadian Government Annuity is now more greatly appreciated by the Canadian public than ever before.

#### Employment Offices Co-ordination Act

The present report is for the sixteenth year in which the Employment Service Branch, set up under the Employment Offices Co-ordination Act, co-operated with the Provincial Governments to maintain the Employment Service of Canada.

The Department of Labour does not itself operate any public employment offices, but, through the device of paying subventions to the provinces, as provided in the Act encouragement is given to the governments of the several provinces to operate such offices on a uniform basis. In view of the close co-ordination of effort which is attained, the employment offices of the several provinces and the federal clearing houses, though each unit retains its individual identity, are commonly considered as a single organization, known as "The Employment Service of Canada."

During the fiscal year 1933-34, uniform agreements were concluded with all the Provincial Governments except that of Prince Edward Island. The sum of money which was specified in the agreement as being available for payment by the Department of Labour to the provinces was the statutory provision of \$150,000. This amount was distributed amongst the provinces in proportion to their expenditures on public employment office administration and operation, the provinces being entitled to claim a portion of the federal appropriation in respect of expenditures on the operation and maintenance of these offices, but no portion of expenditures on purchasing premises or equipment may be claimed from the Department of Labour. The amount of \$150,000 distributed amongst the provinces enabled a repayment to be made to them of 31.6 per centum of their gross expenditures in this field, this being slightly more than was paid by the Dominion in the previous year, due to economies effected by the provinces.

The annual agreements between the Minister of Labour and the several Provincial Governments, concluded under the terms of the Act, provide that the province, in the operation of its employment offices, shall register all applicants offering themselves for employment and undertake to locate suitable

workers for all employers listing vacancies, without charging any fee or commission either to employer or employee. The province further agrees that the officials of the Employment Service shall accept no responsibility with respect to rates of wages or other working conditions offered or asked, but shall merely communicate the information available on these subjects to the applicant or the employer, as the case may be. It is also agreed that where employment is reported to be affected by an industrial dispute, employees being referred to such employment shall be notified of this fact. Another important provision of the agreement is that the province shall make a special endeavour to place in suitable employment handicapped men suffering from the effects of active service during the war. In the agreement the provinces undertake to furnish the Department of Labour with information relative to the transactions of the offices, industrial information, and the like. The Department of Labour is authorized to inspect the provincial employment offices from time to time, to determine whether the conditions of the agreement are being respected.

One of the more important phases of the administration of the Employment Service Branch as mentioned above, is that of specialized employment work on behalf of handicapped veterans of the late war. Until the fiscal year 1923-24 the Department of Pensions and National Health (formerly the Department of Soldier's Civil Re-establishment) endeavoured to place in suitable employment men having physical handicaps due to war service, but since that time the Department of Labour has been charged with the responsibility of this work in all provinces except Quebec, having incorporated it into the Employment Service of Canada. The assistance given by the provincial authorities in connection with the placement of handicapped ex-service men has, it is stated, been most satisfactory, and illustrates the degree of success encountered in Dominion-provincial co-operation to operate the Employment Service. During the last fiscal year, of 4,506 placements made from handicapped ex-service men, 82.6 per cent were in employment of a probable duration of 7 days or less. The percentage of casual placements for the year 1932-33 was 77.7 per cent, and for the year 1931-32 about 71 per cent; therefore it will be observed that the percentage of these placements which is casual has arisen gradually each year. It might be remarked, however, that many of the regular placements made effected a permanent rehabilitation of the applicant placed.

For some years the Employment Service has provided a regular channel of information

for the Department of Immigration and Colonization relative to the availability of labour in Canada as a condition precedent to the admission of workers under contract of employment from outside of Canada. While some hundreds of these cases usually are dealt with each year, due to the economic conditions obtaining and the more rigid regulations in respect to entry which were in force, the number of cases up for consideration was at a low level in the year under review. The final decision as to the admission rests with the Department of Immigration, and in this regard the Employment Service is primarily a fact-finding agency.

Statistical information covering the field of employment is regularly collected and compiled by the Employment Service Branch and published in the LABOUR GAZETTE. These statistics are of two classes: (a) administrative statistics, showing the work performed by the employment offices, based on daily reports received from them; (b) statistics based on monthly reports on unemployment, received from local trade unions. In addition the LABOUR GAZETTE publishes each month index numbers of employment in industry and reports on building permits issued, which are collected by the Dominion Bureau of Statistics, in accordance with the Statistics Act. These statistics are closely followed by large numbers of persons throughout Canada, and the numerous inquiries concerning them received in the department testify to the value set on them by the public.

The report contains tables giving full particulars of the work of the Branch during the year.

While the offices of the service are located at points of chief industrial activity, the facilities accorded are not only utilized locally, but each office supplies a considerable number of workers to the contiguous districts. Out of the total of 376,651 placements effected, 84,454 were made outside of the centres in which the offices are situated.

Since 1919 the railways have accorded to *bona fide* applicants at the Employment Service, who may desire to travel to distant employment for which no workers are available locally, a concession involving a reduced fare. This privilege is effective on the following railroads: Canadian National, Canadian Pacific, Dominion Atlantic, Kettle Valley, Michigan Central, Northern Alberta, Pacific Great Eastern, Quebec Central, Temiskaming and Northern Ontario, and the Wabash. The reduced rate is for a second-class fare at 2.70 cents per mile, obtainable on the surrender of a certificate secured at the employment office. By this means 5,226 persons were aided in securing employment during

the year. A minimum fare of four dollars is stipulated, so that a person travelling to employment at a distance where the reduced rate does not amount to the minimum is not able to derive the benefit therefrom. The Department of Labour continued the arrangements of the previous year with the transportation companies to secure a special reduced transportation rate for persons proceeding to unemployment relief works, whether federal or provincial. As the persons selected to proceed to these camps were in all instances in indigent circumstances, transportation costs were paid to the railways by the Governments. The special requisition required for this transportation, where men are travelling to camps operated by the Department of the Interior or the Provincial Governments or to farm work on a relief basis, were issued only through the Employment Service, and during the year 1933-34 to March 31, 22,247 men were moved on these requisitions.

In many instances where public works were being carried on to provide employment the selection and rotation of the workers engaged was arranged by the employment office at the request of the public authorities having the work in hand. In other instances applicants for relief were required by civic authorities to show certification by the employment office as to their status as unemployed persons.

### Technical Education Act

The Technical Education Act, which was passed by the Parliament of Canada in 1919, provided for the distribution of ten million dollars to the provinces over a period of ten years. Eight of the provinces were unable to earn their entire appropriations during this period, and in order to give those provinces a further opportunity to earn the unexpended portion of their allotments the Act was extended at the 1929 session of parliament for a term of five years. At the end of that period there were still three provinces, namely, Saskatchewan, Manitoba and Nova Scotia, which had been unable to take full advantage of their allotments, and in March, 1934, the Act was again extended for another five years.

The provinces of British Columbia, Alberta, Ontario, Quebec and New Brunswick had received their total grants prior to the commencement of the period under review, but a summary is included in the report of the developments which occurred in technical education in all the provinces.

### Combines Investigation Act

The report contains the 11th annual report of proceedings under this Act. The statute provides for investigation of trade combinations, prices or monopolizing, controlling or

otherwise restraining trade. Formation or operation of such combines against the public interest is made an indictable offence. The statute provides for the instituting of inquiries by the Registrar of the Combines Investigation Act on application by six or more persons or on the initiative of the Minister of Labour or the registrar. If preliminary inquiry discloses evidence justifying further investigation, such investigation may be conducted by the registrar or by a commissioner specially appointed by the Governor in Council. Prosecution of combines may be instituted by the Attorney General of a province or by the Solicitor General of Canada.

The proceedings under the Act are noted in the LABOUR GAZETTE from time to time. The principal proceedings during the year under review were in connection with British anthracite coal, Ontario tobacco, rubber footwear, and gasoline, and particulars are given also of several other applications and resulting investigations.

### Old Age Pensions Act

During the fiscal period the provinces of Nova Scotia and Prince Edward Island became participants in the old age pensions scheme, thus increasing the number of provinces where the Act is in force from five to seven. Payment of pensions is now in effect in the provinces of Alberta, British Columbia, Manitoba, Nova Scotia, Ontario, Prince Edward Island, Saskatchewan, and in the Northwest Territories. Old age pensions are not yet payable in New Brunswick or Quebec, but legislation enacted in 1930 by the province of New Brunswick provided for payment of pensions on a day to be fixed by proclamation. At the end of the fiscal year no proclamation had been issued to make the Act effective in New Brunswick.

The report contains full statistics of old age pensions, including a financial survey as at March 31, 1934; a statement showing by fiscal years the amounts contributed to provinces by the Dominion Government for provincial disbursements under the Act; and a statement showing the recent changes in the numbers and percentages of pensioners in the several provinces.

### Relief Measures

The report gives particulars of the work carried on under the various Relief Acts (mentioned at the beginning of this outline) which provided for the relief of distress due to unemployment and other causes. (The report of the Dominion Commissioner of Unemployment Relief of operations under the Act of 1933, as at March 31, 1934, was given in the LABOUR GAZETTE, April, 1934, page 342).

### International Labour Organization

Important duties devolve upon the Department of Labour arising out of the relations of Canada with the International Labour Organization, which was established in association with the League of Nations at the close of the Great War, under the authority of the Treaties of Peace, with the object of securing the improvement of industrial conditions by legislative action and international agreement.

The performance of the duties thus entrusted to the Department of Labour requires a close study on the part of its officers of the various technical questions figuring on the agenda of the different sessions of the Con-

ference and the meetings of the Governing Body, and also of the questionnaires received from the International Labour Office, besides necessarily entailing much correspondence, not only with other departments of the Dominion Government, but with the provinces and with employers' and workers' organizations. Replies have also to be prepared in the Department of Labour to the various questionnaires circulated on behalf of the International Labour Office.

The Canadian Government has had an advisory officer resident in Geneva, Switzerland, since 1924, in order to secure close touch with the work of the League of Nations and of the International Labour Organization.

## ANNUAL REPORT OF THE DEPARTMENT OF IMMIGRATION AND COLONIZATION, 1933-34

**I**MMIGRATION continues to decrease according to the seventeenth annual report of the Department of Immigration and Colonization for the fiscal year 1933-34. This decrease, it is explained in the prefatory report of the deputy minister, is in accordance with the policy laid down. The extent of this reduced immigration is indicated in a comparison of two three-year periods. In the three years 1928 to 1930 immigrants arriving totalled 436,582; while in the period from 1931 to 1933 the total was 62,503.

It is pointed out that another change "almost as important though not generally known" is the difference in the ratio between males and females in the overseas movement. In the fiscal years 1927-28 and 1928-29, overseas immigration showed the arrival of 178,815 males as against 84,937 females, while the records of 1931-32 and 1932-33 show the arrival of 7,374 males as against 10,667 females. If British immigration is deducted for these two periods, it leaves the results as follows: 1927-28, males, 110,011; females, 42,692; 1931-32, males, 2,479; females, 4,947. The major part of present day immigration, especially from continental Europe, is made up of wives and dependent children of those who arrived some years ago and have become established in Canada.

There were no important changes in either regulations or practice during the past year, the present situation being outlined as follows: "Regulations made by Order in Council in the autumn of 1930 restrict immigration except from Great Britain, Northern Ireland, the Irish Free State, self-governing British Dominions and the United States of America, to two classes, the first being wives and un-

married children under eighteen joining family heads established in Canada, and the second, agriculturists with sufficient capital to begin farming on their own account. All Government propaganda in favour of immigration was discontinued with the change in regulations. In recognition of the fact that it was neither in the interests of Canada nor of the newcomer to encourage the immigration of workers even from British countries, who would not be able to find jobs otherwise than at the expense of these already in Canada, the department issued and circulated through booking agents in the British Isles the following advice: 'Instead of naming a minimum sum, the possession of which might be regarded as warranting encouragement to migrate at this time, the department believes that the interests of intending immigrants and of Canada will be better served by booking agents explaining that workers are not at present in demand anywhere in Canada, and that encouragement should be deferred until a demand arises; any other policy is liable to displace those now employed, or to prevent the absorption of our present surplus. Even workers with moderate capital would do well to defer sailing until conditions improve.'"

The homeward movement of Canadians formerly domiciled in Canada is shown in tabular form. In 1930-31, the number of returning Canadians totalled 30,209. This number had decreased to 9,172 in 1933-34.

*Land Settlement.*—The report of the Chief Commissioner of Colonization deals with the colonization and land settlement activities of the department. For the fourth successive year the efforts of the Colonization Branch, in co-operation with the Canadian National

and Canadian Pacific Railways, have been directed to the settlement of people qualified to undertake farm life. In the year under review, 2,361 families possessing sufficient personal assets to enable a start have been settled on farms, and 5,664 single men placed in farm employment through the combined efforts of these three interests.

The record of settlement and placement by the Department and the railways from October 1, 1930, to March 31, 1934, indicates that 13,459 families were settled on farms, with farm labour placements totalling 29,946.

In addition to this program, there is in operation the Relief Land Settlement Plan

initiated in 1932 (LABOUR GAZETTE, March, 1934, page 218) whereby the Dominion, the province and the municipality concerned jointly contribute a sum not exceeding \$600 per family to cover the cost of establishment and subsistence for a two-year period. On March 31, 1934, this arrangement had resulted in the settlement of 2,954 families, including 15,850 persons.

"Relief settlement," it is stated "had its origin in the belief that it was in the interests of qualified unemployed families themselves and of the taxpayers to capitalize non-productive direct relief expenditures to enable worthy families to become self-supporting."

### WORK OF THE NATIONAL RESEARCH COUNCIL IN 1933-34

IN its seventeenth annual report, the National Research Council reviews its activities during the fiscal year 1933-34. The research work carried on under the authority of the Council is classified as follows:

- I. Researches conducted in the National Research laboratories.
- II. Researches conducted under associate committees, assisted researches in university and other laboratories, and under scholarships.
- III. Analysis and testing, conducted in the National Research Laboratories.
- IV. Reports prepared for individuals and business organizations, necessitating examination of scientific literature; and replies to inquiries for scientific information.

In the first category, there were 87 researches under way during the year, of which 34 were completed and substantial progress made in 16 others. The remainder were mainly new undertakings in the early stages of development. With references to incomplete researches it was stated that these were being continued as rapidly as time and opportunity permit. Commenting on the possibilities in research activities the report states:

"Some of the researches completed have a direct bearing on the utilization commercially of certain of our natural resources, others apply to the perfection of processes already in use, while others have a direct relation to agriculture and the industries related thereto. Plans for the commercial development of some of these results are being undertaken."

Among the completed researches in this group are mentioned the following: the defrosting of refrigerated products; the suitability of Canadian clays for oil refining; the

bonding of rubber to metal; the mechanization and standardization of baking tests; a streamlined locomotive; the chemical investigation of Canadian weeds poisonous to livestock; a comparative study of the suitability of Canadian wools for the manufacture of cloth; the determination of more efficient and economic procedure for power laundries in the washing of cotton fabrics; a refractory lining for steel furnaces; a new refractory brick designed to stand severe metallurgical conditions; some new and very promising results in connection with the magnesians products industry have been obtained; the investigation of certain problems in connection with the stability of aircraft floats has been completed for the Department of National Defence; a photo-electric method of determining the velocity of projectiles has been devised and its application to the practical measurement of such velocities has been demonstrated; a new type of apparatus for baking tests which can be applied to small quantities of grain has been perfected, which will result in a great saving in time in plant breeding operations; a study has been completed on the causes of premature seeding in turnips; tests to determine the better of two models of proposed preventive patrol cruisers for the R.C.M.P. have been completed and put to practical use; a research to determine the cause and to correct the instability in aircraft used for photographic survey work has been furnished and will be put to use by the Air Force.

Substantial progress was reported on the following researches: a new method for the preparation of carbon black from natural gas; the preparation of new forms of maple products, with the object of creating an enlarged market for that commodity (practical

application is now being made of some new processes devised); the preparation of a bitumen suitable for use in the rubber industry from the natural bitumen from Alberta; certain new processes in connection with the problems of the asbestos industry have been practically completed; investigation of certain problems in connection with the tanning industry; a more economical method of distillation to be applied in the oil industry; the development of an apparatus for the study of plant growth under controlled conditions; the effect of aging and heat treatment on seeds; a systematic study of the wheat plant in the hope of finding significant compounds.

The report also describes the work conducted under associate committees, and the assisted researches in university and other laboratories, as well as in analysis and tests in the National Research Laboratories, and in the reports prepared for individuals and business organizations, necessitating examination of scientific data etc.

In surveying future developments in the research field the report observes: "The progress of the work in the laboratories, a consideration of the inquiries received, the growing body of information being accumulated concerning the natural resources of Canada and the possibili-

ties in regard to the expansion of old and the establishment of new Canadian industries, are all continually disclosing new lines of investigation which could be followed up with advantage to the future of Canada. The present financial conditions, however, have put a definite limit upon the work which can be undertaken. The laboratory staff has continued to devote itself enthusiastically to the research projects in hand with the result, as the details in later pages of this report will show, that highly creditable progress has been made during the year.

"Looking to the future, it is suggested that every indication points to an even more intensive application of science to industry, including agriculture, than in the past. This will apply not only to the better understanding of the materials entering into industry and their possible improvement, but also to the training of men who will be in technical control. Standardization will also play a most important part. There is the further fact that in all probability for a period at least the doctrine of national self-sufficiency will be an important factor in determining economic policies and that consequently advantage will lie with those countries possessing important natural resources which are in a position to use them most economically."

## UNEMPLOYMENT INSURANCE AND ASSISTANCE IN GREAT BRITAIN

### Draft Regulations by Unemployment Assistance Board

THE Unemployment Assistance Board, which was established under the provisions of the Act amending the Unemployment Insurance Acts, passed last year by the Parliament of Great Britain (LABOUR GAZETTE, August, 1934, page 744), issued regulations on December 12 for the administration of unemployment assistance. The regulations, which are subject to approval by Parliament, are outlined in the following summary, taken from the *Ministry of Labour Gazette* (London), December, 1934. As already noted in the LABOUR GAZETTE, the new Act embodies the principle recommended by the Gregory Commission in 1932, that the insurance and relief features of the scheme should be separate and distinct. The regulations outlined below are those governing relief only. The main provisions of the regulations are as follows:—

The needs of an applicant, including those of any other member of his household dependent on or ordinarily supported by him not being persons who fulfil the qualifications of section 36 (1) of the Act, are first to be

assessed on the assumption that they have no resources. For this purpose a scale of allowances is provided, making provision for the varying needs of persons according to age and sex, and according to whether they are living alone or as members of a household. Where the application is made by a person living as a member of a household consisting of two or more persons the scale is—

	Week
(a) For the householder and the householder's wife or husband..	24s.
(b) For the householder (where rate (a) is not applicable):—	
Male..	16s.
Female..	14s.
(c) For each member of the household to whom the foregoing rates do not apply:—	
If aged 21 years or over:—	
For the first such member:—	
Male..	10s.
Female..	8s.
For each subsequent member:—	
Male..	8s.
Female..	7s.

	Week
If aged 18 years or over but less than 21 years:—	
Male . . . . .	8s.
Female . . . . .	7s.
If aged 14 years or over but less than 18 years . . . . .	6s.
If aged 11 years or over but less than 14 years . . . . .	4s. 6d.
If aged 8 years or over but less than 11 years . . . . .	4s.
If aged 5 years or over but less than 8 years . . . . .	3s. 6d.
If under the age of 5 years . . . . .	3s.

Where the application is made by a person living otherwise than a member of a household consisting of two or more persons the scale is—

	Week
(a) If aged 18 years or over:—	
Male . . . . .	15s.
Female . . . . .	14s.
(b) If under the age of 18 years:—	
Male . . . . .	13s.
Female . . . . .	12s.

To this scale there are two provisos:— (a) that where a household consists of only one child in addition to not more than two adults, the needs of this child shall not be assessed at less than 4s. This increases the assessment which would otherwise be given, if the child is under five years of age, by 1s.; and, if the child is 5 years or over but less than 8 years, by 6d.

The second proviso (b) is that, where there are more than five persons in the household, the provisional assessment for that household shall be decreased by 1s. for every person in excess of five. This provision is prompted by the fact that, beyond a certain point, the common expenses such as fuel, light, etc., of a household do not increase proportionately with the size of the household.

If the applicant is living as a member of a household an adjustment for rent is made, based on the total scale allowance for the whole household. This adjustment is an important feature of the scheme. The scale of allowances for households of two or more persons assumes a basic rent of 7s. 6d. per week (including rates), where the appropriate scale allowance for the whole household is from 24s. to 30s. per week inclusive, and a basic rent of one-quarter of such allowance where it exceeds 30s. Where the actual rent paid exceeds the basic rent, the allowance for the applicant and his dependents is increased by the amount of the excess, subject to a maximum increase equal to one-third of the basic rent in the particular case. Where, however, the actual rent paid by the household is less than the basic rent the allowance is reduced *pro tanto*; subject to the important

qualification that, in special circumstances, the amount of such reduction may be decreased by an amount not exceeding 1s. 6d.

When the scale allowance has been adjusted according to rent the figure arrived at is described as the Provisional Assessment. The Provisional Assessment represents, in effect, what may be called the normal needs of the household, without any regard to resources and without any adjustment for special circumstances.

The next step is to calculate the available resources of the whole household in the manner prescribed in the Regulations. Generally speaking, the Regulations say in effect that a person shall be regarded as in need if the "available resources" of the household are less than the Provisional Assessment. If the applicant's resources (which include those of all members of the same household) are insufficient to meet the total of his assessed needs, then he can be considered to be in need of an allowance; subject, however, to one qualification, namely, that the amount by which the resources fall short of the needs must be substantial when considered in relation to all the circumstances of the case. Conversely, if the amount by which the resources exceed the needs is not substantial, he may, nevertheless, be deemed to be in need.

Resources may be either capital assets or income, and the latter may be of many types, e.g., sums received from boarders, disability pensions, earnings, etc. Moreover, such capital assets or income may belong either to the applicant or to members of his household bound to him by close ties (wife, husband, father, mother) or to other members of his household. The amount of any resources which is to be considered as available for the needs of the household varies both with the nature of the resource and with the relationship to the applicant of the person owning or receiving it. The rules governing the calculation of these amounts are detailed, but the more important provisions are as follows:—

Capital assets are not to be considered as immediately available to meet the needs of a household save in so far as they exceed £300.

Below that amount, the first £25 is to be disregarded, and every succeeding complete £25 up to £300 is to be regarded as yielding a weekly income of 1s. Where not less than one-half of the assets belong to members of the household other than the applicant or his or her wife or husband, father or mother, the limit of £300 is extended to £400. Moreover, in the case of all such assets as belong to such other members, the sum to be taken

into account is the actual income received therefrom, and not the sum calculated as described above.

The provisions regarding disability pensions, workmen's compensation, etc., follow exactly the provisions of section 38 (3) of the Act, and accordingly need not be set out. They include the provision that the first £1 a week of any wounds or disability pension should be disregarded.

In regard to earnings, the rules are that the following sums shall be regarded as reserved for the personal requirements of the wage-earner (as distinct from maintenance):—

(a) 5s., or one-half, whichever is less, in the case of the applicant or his or her wife, husband, father or mother;

(b) one-third of the first £1 and one-quarter of the remainder of all earnings in the case of the son or daughter, brother or sister of the applicant;

(c) one-third of all earnings in the case of all others.

There are also provisions governing the treatment of resources from all other sources, where such resources belong to a member of a household other than the applicant.

There are two further important provisions governing the treatment of resources. The first provides that the resources of any person may be taken into account in a different way from that provided for in the rules stated above where there are special circumstances, and in particular where special expenditure is incurred in connection with that person's employment. The second provides that where there are taken into account the resources of a person whose needs have not been included with those of the applicant in the Provisional Assessment, then from those resources, before they are regarded as available for the needs of the household, there shall be deducted, in addition to all other sums to be deducted under other provisions, the appropriate scale allowance for that person. The effect of these two provisions is further to increase the proportion of resources which is left to their owners and is not regarded as available to be set off against the household's needs.

When the available resources have been calculated, the general rule is that the Final Assessment shall be the amount by which the Provisional Assessment exceeds the available resources. This rule is subject, however, to three important qualifications.

The first is that no applicant shall be assessed at a sum equal to or greater than the sum which would normally be available by way of earnings for the support of the household if he and other members of the household whose needs have been taken into

account were following their normal occupations. The second provides that a Final Assessment may be adjusted by way of increase or reduction to meet special circumstances. This discretionary power is of great importance. The third proviso enables a Final Assessment to be increased by a reasonable amount to provide for needs of an exceptional character.

In the White Paper it is estimated that, with the present level of unemployment, the average number of persons of the class now entitled to transitional payments who will receive unemployment assistance allowances will be about 725,000 (with their dependents in addition). It is not possible, in advance of experience, to estimate the number of other persons who will receive allowances; but it is possible that the total number of claims under the Unemployment Assistance Scheme may be in the neighbourhood of a million (with their dependants in addition).

The actual rate of expenditure in respect of persons entitled to transitional payments is at present about £41,000,000; and it is estimated that under the Regulations the full rate of expenditure under the Unemployment Assistance Scheme will be increased by about £3,000,000 in respect of these persons.

Figures are not available with regard to the present rate of expenditure by Public Assistance Authorities on those classes of persons who will be transferred from the authorities to the Unemployment Assistance Scheme, and, therefore, no precise estimate of the cost of the new Scheme can at present be given. The White Paper states, however that it cannot be assumed, on the basis of present unemployment, that the total extra cost to the Exchequer in respect of assistance to the unemployed and relief to Local Authorities' rate burdens will be less than £8,000,000 a year.

Canadian coal mines employed, on the average, 24,812 wage-earners in 1933; during the previous year, 25,597 men were employed. The eastern coal mines furnished employment to 12,886 wage-earners and the western mines to 11,926 men. Surface employees averaged 215 days work during the year and underground workers 172 days. There were in addition to these wage-earners 1,283 salaried employees on the mine payrolls in 1933. Salaries and wages paid to the employees working in or about the coal mines totalled \$22,378,736 in 1933; during the previous year, \$25,042,769 were paid. Despite the advance in production during the year there was a slight reduction in the number of man days work furnished to employees; the 1933 total was 4,511,345, and the previous year's, 4,544,262.

## AMENDED FAIR WAGES REGULATIONS APPLICABLE TO FEDERAL CONTRACTS FOR THE MANUFACTURE OF CLOTHING SUPPLIES, ETC.

PARTICULARS have been published in the monthly issues of the LABOUR GAZETTE for years past setting forth the labour conditions applicable to all contracts for the manufacture and supply to various departments of the Government of Canada of fittings for public buildings; harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers and other Government officers and employees; mail bags, letter boxes and other postal stores. The fair wages conditions in question were sanctioned by an Order in Council passed on June 7, 1922 (P.C. 1206).

Under these conditions, provision was made for the observance of the current wages rates and working hours in the district where the contract was being carried out; or in the absence of such current standards, of fair and reasonable wage rates and working hours.

The attention of the Government having been directed to low wages rates paid in certain industries, particularly in the case of unskilled labour, both male and female, an Order in Council was adopted on December 31 rescinding the labour conditions previously applied to such contracts and substituting other conditions therefor.

The provision for the payment of wages not less than current rates, or fair and reasonable rates if there are no current rates, is retained in the new conditions but with the added proviso that in no event shall the wage rate for male workers 18 years of age and over be less than 30 cents an hour, and for female workers 18 years of age and over, 20 cents an hour. It is also declared that males and females under 18 years of age shall be entitled to rates of wages not less than those provided for women and girls in the Minimum Wage scales of the respective provinces, and that in any cases where the Provincial Minimum Wage laws require the payment of higher wages than those set out above, such higher rates shall apply in the execution of Federal contract work.

The text of the new labour conditions is as follows:—

### LABOUR CONDITIONS

1. All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are

respectively engaged, and if there be no current rate in such district, then a fair and reasonable rate. In no event shall the wages be less than those set out in the schedule of minimum rates hereunder. The working hours shall be those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In the event of a dispute arising as to what is the current or a fair and reasonable rate of wages, or what are the current hours fixed by the custom of the trade or fair and reasonable hours, or as to rates for overtime, it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with. By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

### *Schedule of Minimum Wage Rates*

Males (18 years of age or over), 30 cents an hour minimum.

Females (18 years of age or over), 20 cents an hour minimum.

Males and Females under 18 years of age shall not receive less wages than those provided for women and girls in the Minimum Wage Scale of the province in which this work is performed.

In certain of the Maritime Provinces where no minimum wage legislation is in effect, the contractors shall pay to males and females under 18 years of age wages not less than those provided for women and girls in the Minimum Wage Act of the Province of Nova Scotia.

In any province where the Minimum Wage legislation requires payment of wages in excess of those above set out, such higher rates shall apply on this work.

2. The Contractor shall post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workpeople, the foregoing fair wages provisions for the protection of the workpeople employed.

3. The Contractor shall keep proper books and records showing the names, ages, trades

and addresses of all workmen in his employ and the wages paid to and time worked by each workman and the books and documents containing such records shall be open for inspection by a Fair Wages Officer of the Government at any time it may be expedient to the Minister of Labour to have the same inspected.

4. The Contractor's premises and the work being performed under this contract shall be open for inspection at all reasonable times by any officer authorized by the Minister of Labour for this purpose; all such premises shall be kept by the Contractor in sanitary condition.

5. With a view to avoidance of any abuses which might arise from the subletting of contracts it shall be understood that subletting is prohibited unless the approval of the Minister is obtained; sub-contractors shall be bound in all cases to conform to the conditions of the main contract, and the main contractor shall be held responsible for strict adherence to all contract conditions on the part of sub-contractors; the contract shall not, nor shall any portion thereof be transferred without the written permission of the Minister; no portion of the work to be performed shall be done at the homes of the workpeople, or, except as specially provided for under legislative authority, by inmates of penal institutions.

6. All workmen employed upon the work comprehended in and to be executed pursuant to this contract shall be residents of Canada, unless the Minister is of opinion that Canadian labour is not available or that special circumstances exist which would render it contrary to the public interest to enforce this provision.

7. The Contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of the contract in respect of work and labour performed in the execution of the contract unless and until he shall have filed in the office of the Minister in support of his claim for payment a statement attested by statutory declaration showing: (1) the rates of wages and hours of labour of the various classes of workmen employed in the execution of the contract; (2) whether any wages in respect of the said work and labour remain in arrears; (3) that all the labour conditions of the contract have been duly complied with; or, in the event of notice from the Minister of Labour of claims for wages, until the same are adjusted. The contractor shall also from time to time furnish to the Minister such further detailed information and evidence as the Minister may deem necessary in order to satisfy him that the conditions herein contained to secure the payment of fair wages have been complied with, and that the workmen so employed as aforesaid upon the portion of the work in respect of which payment is demanded have been paid in full.

8. In the event of default being made in payment of any money owing in respect of wages of any workman employed on the said work, and if a claim therefor is filed in the office of the Minister and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of the moneys at any time payable by His Majesty under said contract and the amount so paid shall be deemed payments to the Contractor.

## COLLECTIVE LABOUR AGREEMENTS EXTENSION ACT OF QUEBEC

### Agreements Recently Made Obligatory and Further Applications

RECENT proceedings under the Collective Labour Agreements Extension Act of Quebec include the extension to all employees and employers in the industry and district by Orders in Council, of agreements affecting granite quarrymen and granite cutters, Province of Quebec; fur workers, Montreal and District; and painters at Three Rivers and District; application for changes in the Orders in Council already approved affecting shoe workers in the Province and certain building trades workers in Quebec City and District; the application for the extension of an agreement affecting the ornamental iron and bronze trade in Quebec City and District.

Under the Collective Labour Agreements Extension Act, Quebec, the text of which was printed in the LABOUR GAZETTE, May, 1934, page 417, applications may be made to the provincial Minister of Labour, by any association of employees or employers who are parties to a collective agreement, to have those terms of such agreement which concern rates of wages and hours of labour made obligatory on all employees and employers in the same trade or industry within the territorial jurisdiction determined by the agreement. The applica-

tion is then printed in the *Quebec Official Gazette*, and during the following thirty days objections may be made to the Minister of Labour. After this delay, if the Minister of Labour deems that the provisions of the agreement "have acquired a preponderant significance and importance" that would make the establishment of these conditions advisable, an Order in Council may be passed making the terms obligatory on all employees and employers in the trade or industry in the territory included in the agreement, from the date of the publication of the Order in Council in the *Quebec Official Gazette* and for the duration of the agreement. The provisions of an agreement thus made obligatory are to govern all individual labour contracts in the specified trades and district, except that those individual contracts which are to the advantage of the employee will have effect unless expressly prohibited in the agreement. Applications for the extension of certain agreements and Orders in Council subsequently passed under this Act have been noted in the LABOUR GAZETTE each month beginning in June, 1934.

GRANITE QUARRYMEN AND GRANITE CUTTERS, PROVINCE OF QUEBEC.—An Order in Council,

approved December 21, 1934, makes obligatory throughout the Province the conditions of an agreement between certain owners of quarries and granite cutting plants and their employees. (The application for this extension was noted in the *LABOUR GAZETTE*, December, 1934, page 1147.) The terms of the agreement thus made obligatory are as follows:—

1. The rates of wages shall be the following for each of the trades mentioned below:—

Trades	Wage rate per hour
Granite cutters.. . . .	\$ 0 50
Surface machine operators, who are fully competent Granite Cutters.. . . .	0 50
Quarrymen employed in quarries.. . . .	0 35
Inexperienced labourers in quarries.. . . .	0 25
Apprentice Granite Cutters:	
1st year.. . . .	0 10
2nd year.. . . .	0 20
3rd year.. . . .	0 20

2. Granite cutters, or surface machine operators who are fully competent granite cutters and apprentice granite cutters shall work a maximum of eight hours per day and forty-five hours per week. Quarry men and inexperienced labourers shall work a maximum of nine hours per day and fifty hours per week. However, employees shall work reasonable and necessary overtime for the completion of urgent business.

3. Overtime work shall be paid at the rate of time and a quarter of the regular rates.

4. The territorial jurisdiction covered by this agreement shall comprise and include the entire Province of Quebec.

5. It is hereby expressly stipulated and provided that contracts signed or entered upon before the adoption of the Order in Council approving this request are exempt from and unaffected by the provisions of this agreement.

6. The present agreement shall apply and extend to all granite cutting operations in connection with buildings, bridges, curbing and monumental works.

7. The present agreement shall be valid from the date of the publication in the *Quebec Official Gazette* of the Order in Council approving the said request and shall remain in effect until the 31st of December, 1935.

**FUR WORKERS, MONTREAL AND DISTRICT.**—An Order in Council approved December 21, 1934, makes obligatory the conditions of an agreement between members of the Montreal Fur Manufacturers Protective Association and the Joint Board of the Furriers' Unions of Montreal comprising locals 66 and 67 of the International Fur Workers Union of the United States and Canada. (The application for the extension of this agreement was noted in the *LABOUR GAZETTE*, December, 1934, page 1147.) The terms of the agreement thus made obligatory are as follows:—

1. Forty-four hours shall constitute a working week, the hours to be distributed in such manner as the employers and workers shall agree, working hours not to start earlier than 8.00 A.M. nor finish later than 6.00 P.M. week days and 8.00 A.M. to 12 noon Saturdays.

2. Overtime shall be permitted only during the months of September, October, November, December, January, February and March and at no other time. Overtime shall be paid at the rate of time and one-half.

3. All employees to receive pay for the following legal holidays: Good Friday, Victoria Day, Dominion Day, Labour Day, Thanksgiving Day, Christmas Day. Employees must work some part of the pay week in which the holiday falls to be entitled to any pay during the said week; they are entitled to the same proportion of pay for the holiday as the time they work bears to the full working time of said week.

All work done on above holidays shall be paid for at the rate of time and one-half plus the day's pay, but it shall be optional with individual employee whether he or she shall work on the above holidays or not.

The payment of wages, on said legal holidays, will be obligatory in the case where an establishment takes advantage of the said legal holiday to close his establishment for the whole week.

4. Wages shall be paid weekly and in cash, either Friday or Saturday.

5. Minimum Wage Scale to take effect January 1st, 1935.

#### Cutters:

1st class.. . . .	\$35 00 a week
2nd class.. . . .	28 00 " "

#### Operators:

(Male) 1st class.. . . .	28 00 " "
(Male) 2nd class.. . . .	20 00 " "
(Female) 1st class.. . . .	20 00 " "
(Female) 2nd class.. . . .	15 00 " "

#### Finishers:

(Female) 1st class.. . . .	18 00 " "
(Female) 2nd class.. . . .	14 00 " "

#### Apprentice Cutters, Trimmers,

##### Blockers and Nailers:

1st class.. . . .	20 00 " "
2nd class.. . . .	12 00 " "

#### Examiners:

1st class.. . . .	24 00 " "
2nd class.. . . .	12 00 " "

Apprentices shall be paid according to Minimum Wage Law.

6. In the event of wages being in excess of the minimum scale mentioned in article 54 hereinabove, it is agreed that no reduction shall be made during the life of this agreement.

7. This agreement shall commence at once and terminate on January 1st, 1936. One month before the expiration of this agreement, the Conciliation Committee shall meet and take up the question of a renewal, revision or modification of this agreement.

8. The territorial jurisdiction determined by the present agreement shall comprise the island of Montreal and a radius of 50 miles around and beyond its limits.

**PAINTERS, THREE RIVERS AND DISTRICT.**—An Order in Council approved December 4, 1934, makes obligatory the terms of an agreement between certain painting contractors of Three Rivers and the National Catholic Union of Painters, Incorporated, of Three Rivers. The application for this extension was noted in the *LABOUR GAZETTE*, November, 1934, page 1005. The terms of the agreement thus made obligatory are as follows:

1. The words "journeyman painter" in this agreement, signify a workman doing any current painting work, wall papering, imitation-decorating and glazing works and having obtained his certificate from the joint committee, provided by law.

The word "Apprentice", in this agreement, means a junior workman or any other person having obtained, from the joint committee provided by law, a certificate attesting that he is learning the trade of painter.

2. The rate of wages shall be the following for the trade of painter:

Painter (journeyman) . . . . .	\$0 45 per hour
Apprentices (1st year) . . . . .	15 " "
Apprentices (2nd year) . . . . .	18 " "
Apprentices (3rd year) . . . . .	22 " "

3. The time of labour shall conform with the provision of the Order in Council No. 1496 of July 12th, 1933, for the putting into force of the Act respecting the Limiting of Working Hours (23 Geo. V, ch. 40); there shall be no work on Sundays, holidays of obligation, the feast of Saint John Baptiste, Good Friday and Labour Day.

4. In the case of non-application or derogation granted by the competent authority respecting the limiting of working hours, the rate of wages of time and a half will be paid to journeymen and apprentices for all overtime.

5. The workmen will be paid each week. The travelling expenses of workmen sent or employed outside the town in which they reside, will be at the cost of the contractors. No salary will be paid during the time of the trip.

6. The territorial jurisdiction determined by the present agreement comprises the counties of Berthier, Maskinongé, Saint Maurice, Laviolette, Champlain and Trois Rivières.

7. The present agreement shall be valid from the date of the publication, in the Quebec Official Gazette, of the Order in Council approving the present request and shall remain in force until the 1st of December, 1935. It shall then renew itself automatically each year, unless a notice of thirty days be given before the expiration of each annual term, by one or the other of the contracting parties desiring to put an end thereto.

SHOE WORKERS, PROVINCE OF QUEBEC.—The terms of the agreement made obligatory by

Order in Council in this industry were printed in the LABOUR GAZETTE, September, 1934, page 825. Application has since been made by the contracting parties for the addition of a number of operations to those listed in each of the four classes of work and for the further addition of a clause providing that the Joint Committee may if necessary complete the classification of similar or supplementary operations not already mentioned and upon notice of such additions being given to the employers concerned, these operations will then be included as if mentioned in the Order in Council. The application for this addition to the Order in Council was printed in the *Quebec Official Gazette*, December 22, 1934.

BUILDING TRADES, QUEBEC CITY AND DISTRICT.—The terms of the agreement made obligatory by Order in Council affecting certain building trades in this district were printed in the LABOUR GAZETTE, September, page 823. Application has since been made by the contracting parties for the addition of a clause to the Order in Council providing that building contracts for which tenders are called before the adoption of the Order in Council are not subject to the provisions of the agreement. The application for this change was printed in the *Quebec Official Gazette*, December 15, 1934.

ORNAMENTAL IRON AND BRONZE WORKERS, QUEBEC CITY AND DISTRICT.—Notice of application for the extension of the agreement between proprietors of machine shops for ornamental iron and bronze work and the Union of Ornamental Iron and Bronze Workers was published in the *Quebec Official Gazette*, December 15, 1934. The agreement provides for a wage rate of 50 cents per hour for mechanics, 40 cents for adjusters and 30 cents for helpers.

## MINIMUM WAGES IN MANITOBA

### General Order governing Employment of Persons over 18 Years of Age\*

THE following order under the Minimum Wage Act of Manitoba was gazetted on November 24, and became effective one month after that date. As noted in the LABOUR GAZETTE, June, 1934, page 519, the Act was amended at the last session of the provincial legislature to make it applicable to all workers, male or female, who are employed in factories, shops, mail order houses, offices, or places of amusement (formerly only women, and boys under 18 years of age, were within the scope of the Act). The text of the new order is as follows:—

\* By a typographical error on page 1096 of last issue this order was referred to as applicable to persons "under" 18 years of age.

#### THE MINIMUM WAGE ACT

Public notice is hereby given that by Order-in-Council No. 1390/34, dated 17th November, A.D. 1934, and in pursuance of the provisions of "The Minimum Wage Act," the Lieutenant-Governor-in-Council hereby makes the following order, which order shall come into effect one month after the publication thereof in the *Manitoba Gazette*:

Pursuant to the provisions of "The Minimum Wage Act," it is hereby ordered as follows:

1. In these regulations "person" includes a body corporate.

2. No person in Manitoba shall employ any employee of eighteen (18) years of age or over, or suffer or permit any employee of eighteen (18) years of age or over to be employed in Manitoba at a rate of wages less than the rates herein provided unless:

(a) a lower rate is permitted by a regulation under "The Minimum Wage Act" covering the specific occupation in which the employee is engaged;

(b) such employee is employed on a farm or market garden or is an employee of a person operating a farm or market garden and the work performed is in connection with a farm or market garden;

(c) such employee is employed as a domestic servant or in household service in a private dwelling which is not a boarding, rooming or victualling house, nursing home, or an establishment of any similar nature, and not operated as a business or source of revenue forming the main source of livelihood for the owner or occupant;

(d) such employee has been granted a special licence authorizing employment at a lesser rate under the provisions of section 10 of "The Minimum Wage Act";

(e) such employee is exempted under the provisions of section 2 (h) of "The Minimum Wage Act".

3. No employee in Manitoba shall be paid wages at less than the following minimum rates:

(a) if employed in any city or in the Municipalities of St. James, St. Vital, Fort Garry, Tuxedo, East Kildonan, West Kildonan, Old Kildonan, Brooklands, Transcona, or at any summer resort during the months of June, July, August or September, the minimum rates shall be:

Twelve dollars (\$12.00) per week of forty-eight (48) hours or twenty-five (25) cents per hour;

(b) if employed in any other part of Manitoba the minimum rates shall be:

Ten dollars (\$10.00) per week of forty-eight (48) hours or twenty-one (21) cents per hour.

4. Wages shall be paid weekly in cash, and after each week's wages have been earned they shall be paid within three (3) days.

5. Where the employer furnishes board and lodging to an employee the employer may deduct from the wages of the employee a sum not more than two dollars and fifty (\$2.50) per week for room, and not more than four dollars (\$4.00) per week for board, and not more than six dollars and fifty cents (\$6.50) per week for both board and lodging. Part board or lodging may be deducted at the same ratio.

6. The Board, in exceptional cases or where emergency conditions exist, may issue permits upon application therefor granting modification of, or exemption from these regulations.

7. Any person guilty of a violation of any of these regulations shall be punishable by fine or imprisonment, or both, as provided in section 17 of "The Minimum Wage Act".

Dated at the office of the Provincial Secretary this twenty-first day of November, A.D. 1934.

D. L. McLEOD,  
Provincial Secretary.

## BRITISH COLUMBIA BOARD OF INDUSTRIAL RELATIONS

### Supplementary Order under Male Minimum Wage Act governing the Logging Industry

THE Board of Industrial Relations of British Columbia, issued the following Order, No. 1B, in December. The text of Order No. 1, appeared in the LABOUR GAZETTE, May, 1934, page 419; and that of Order No. 13 in the issue for October, 1934, page 914. Order No. 1A (LABOUR GAZETTE, December, 1934, page 1095) contained provisions relating to watchmen in the logging industry.

#### ORDER No. 1B.

Pursuant to the provisions of the "Male Minimum Wage Act," being chapter 47 of the Statutes of British Columbia, 1934, the Board of Industrial Relations hereby orders:—

1. That with respect to Order No. 1 of the Board of Industrial Relations establishing a minimum wage in the logging industry, published in the *British Columbia Gazette* on April 12th, 1934, and with respect to Order No. 13 of the said Board establishing a minimum wage in the logging industry east of the Cascade Mountains, published in the *British Columbia Gazette* on October 4th, 1934, employees employed in the making of shingle-bolts—that is, felling, bucking, and splitting—shall be paid a minimum price or rate of one dollar and thirty cents (\$1.30) per cord according to official scale or measurement, and such set rate or price shall be paid *pro rata*, according to the hours worked, to each and every person so engaged under a contract or agreement for making shingle-bolts.

2. Order No. 1 and Order No. 13 are respectively varied accordingly.

Dated at Vancouver, B.C., this 14th day of December, 1934.

Board of Industrial Relations.

ADAM BELL, Chairman.

FRAUDENA EATON.

CHRISTOPHER JOHN McDOWELL.

JAMES THOMPSON.

### Workmen's Compensation in Ontario in 1934

The summary of figures for the Workmen's Compensation Board of Ontario for the year 1934 shows a total of 54,730 accidents reported during the year, as compared with 38,042 during the prior year. The fatal accidents numbered 276, as compared with 228 during 1933.

The total benefits awarded during the year amounted to \$4,499,707.23, as compared with \$3,699,068.95 during 1933, the 1934 figures being made up of \$3,657,968.82 compensation and \$841,738.41 medical aid. Taking a basis of 300 working days, the average daily benefits awarded amounted to about \$15,000, requiring an average of 760 cheques per day. The average number of new claims reported daily increased from 127 in 1933 to 182 in 1934.

The accidents reported during December numbered, 4,328, as compared with 4,849 during November, and 3,421 during December of 1933.

## SOME RECOMMENDATIONS OF THE PROVINCIAL ECONOMIC INQUIRY IN NOVA SCOTIA

AMONG the subjects dealt with in the report of the Royal Commission (Provincial Economic Inquiry)—appointed by the Lieutenant-Governor of Nova Scotia on July 27, 1934—were conditions of employment, economic councils, medical services, etc.

The report is presented in two parts—a main report signed by two of the commissioners (Mr. John Harry Jones, professor of Economics and Head of the Commerce Department, University of Leeds; and Mr. Alexander S. Johnston, C.M.G., LL.D. of Ottawa)—and a complementary report (from a somewhat different method of approach) by Dr. Harold A. Innis, Associate Professor of Political Economy, University of Toronto.

*Conditions of Employment.*—With reference to conditions of employment, the main report states that the commission's attention was drawn "to inequalities in the length of the working day and the need for introducing legislation regulating the hours of work." On this point the report continues as follows:—

"We do not feel able to recommend legislation on this subject by the Provincial Government acting alone. Those employers whom we consulted expressed sympathy with the object that such legislation would have in view and their desire to reduce the hours of the working week as far as practicable. But apart from the fact that the conditions of operation were such as to make it extremely difficult, if not impossible in practice, to standardize any working day throughout an establishment, what was practicable in an industry competing in markets outside the province was determined by conditions prevailing elsewhere. We agree with this view, which is supported by recent wage experiments conducted by individual provinces irrespective of conditions prevailing in other provinces. Legislation dealing with the main conditions of employment appears to us to be a matter that should be relegated to Federal Control rather than remain, as at present, under Provincial control.

"But we wish to draw attention to the practice of many firms, some within the province, who have succeeded in increasing efficiency and reducing costs by improving the conditions of employment. We would stress in particular those practices which bear on the questions of security, fatigue and incentive. It is our considered view that the time has arrived when sympathetic consideration should be given by the appropriate authorities throughout the Dominion, to the question of shortening the working day in industry, where

that has not already been achieved, thereby establishing conditions in conformity with the possibilities created by modern economic progress."

*Medical Aid.*—Under this heading the main report of the Commission recommends as follows:—

"Our attention has been drawn to the fact that in a number of remote districts the residents suffer from lack of opportunity to receive prompt medical aid and dental treatment, particularly in winter. The result is that diseases cannot be combatted at an early stage and illnesses prove fatal when prompt attention would have saved the lives of patients.

"Children are unable to receive the dental care that is required, with the result that when they grow up they suffer from serious handicaps and even serious ailments.

"We desire to draw the attention of the Government to the importance of this problem and to suggest that the medical profession in Nova Scotia should give it earnest attention."

Further observations are made on the question in the complementary report by Dr. Innis, who declared that health services in the province "are very inadequate". Dr. Innis deals with the problem under the classification of "Education, Health and Labour", and draws attention to housing conditions in industrial centres.

*Economic Council.*—The main report outlines the problems confronting industry, and in emphasizing "as the first need" the establishment of an economic council, makes the following recommendation:—

"The Council should be composed mainly of a group of business men of the highest standing and respected for their own achievements in the business and professional world. This Council should include a representative of agriculture, of fishing, of lumbering, of coal mining, and of a group of miscellaneous manufacturing industries. It should also include a representative of finance broadly interpreted, of law and of accountancy, as well as of each of the Universities in the Province. It should also include a geologist as representing the science dealing with those natural resources which are the foundation of the economic structure.

"The Secretary should be an economist of high standing, preferably one with knowledge of administration. He should be a full time officer responsible to a Deputy Minister. The

Council should be appointed in the first place, for a period of five years. In the selection of members political considerations should be carefully avoided.

"The Council should be asked to act as a body to advise the Government on matters relating to the development of industry and trade within the Province. We attach importance to research and submit that it should receive the attention of the Council."

*Old Age Pensions, Unemployment Insurance, etc.*—In the section headed "Financial Arrangements Between the Dominion and the Provinces" the following recommendations appear:

1. That the Dominion should assume full responsibility for the cost of Old Age Pensions.

2. That the Dominion should assume full responsibility for unemployment insurance insofar as such a measure, when adopted, calls for Government contributions.

3. That the Dominion should continue grants for the maintenance of technical or agricultural education, subject to periodic

revision and with no stipulation requiring equal contributions for such purposes by the Provinces. Such grants should be surrounded with appropriate safeguards for efficient administration and prudent expenditure.

4. That the Dominion should co-operate with the Provinces in order to remove such duplication as exists in the administration of agriculture and public health and other services in which there are concurrent or competing jurisdictions.

*Co-operation.*—Other recommendations embodied in the main report include the establishment of a permanent civil service and the adoption of legislation giving "greater opportunities for co-operative organization than now appears to exist." On the subject of co-operation Dr. Innis suggests that "the province should introduce, at its earliest convenience, a Co-operative Societies Act, modelled on the experience of other countries, but adapted to local needs. The movement deserves every advantage in expert guidance and direction."

## National Economic Council in Chile

By a Decree of October 25, 1934, a National Economic Council was established in Chile for the purpose of co-ordinating the different activities of the Government in economic and financial matters.

The Council consists of the Minister of Finance, who acts as Chairman, and the Ministers of Commerce, Public Works, Agriculture and Labour. The Council will be assisted by a committee composed of the Superintendent of Banks, the Superintendent of Insurance Companies, Joint Stock Companies and Commercial Exchanges, the President of the Central Bank, the President of the National Mortgage Bank, the President of the National Savings Bank, the Manager of the Chilean Saltpetre and Iodine Marketing Association, the General Manager of the State Railways, the Presidents of the Commercial Exchanges of Santiago and Valparaiso and ten delegates of the Confederation of Production and Commerce selected to represent the different forms of private enterprise in the country.

The objects of the Council are defined as follows: to co-ordinate the work of the different Government departments which are closely concerned with economic matters, and formulate a definite general policy; to give a more fruitful direction to all national activities aiming at the development of the re-

sources of the country; and to enable the Government to ensure that individual enterprise is directed to the public interest.

## Workmen's Compensation in New Brunswick

The Lieutenant Governor and Council of New Brunswick assented on November 22 to the following regulation of the Workmen's Compensation Board.

### REGULATION 18

The Workmen's Compensation Board is hereby authorized to pay the board of injured workmen at places other than a hospital, who do not necessarily require hospitalization, when in the Board's opinion, the paying of such board shall be a saving in medical fees and transportation.

## Natural Products Marketing (B.C.) Act

Under the Natural Products Marketing (British Columbia) Act, schemes were adopted in December: (1) "to regulate the marketing of beef cattle, beef and products thereof produced in that part of British Columbia south of the 57th parallel of latitude"; and "to regulate the marketing of sheep and products derived or processed from sheep within all that portion of British Columbia situate south of the 57th parallel of latitude"

## REGULATIONS GOVERNING PILOTS IN DISTRICT OF SAINT JOHN, N.B.

THE *Canada Gazette* of December 22, 1934, contains notice of the repeal of the pilotage bylaws for the pilotage district of Saint John (confirmed by Order-in-Council of August 25, 1920) and the issuance, pursuant to the provisions of the Canada Shipping Act, of new bylaws, effective from December 1, 1934.

The first part of the order sets forth the scale of pilotage dues for all ships not exempted under the Canada Shipping Act, defines the pilotage district and details the procedure in connection with the appointment of apprentice pilots and the licensing, examination and retirement of pilots.

**Pilotage Fund.**—The pilotage fund is created out of the collection of pilotage dues. It is administered by the Pilotage Authority (Minister of Marine) "who shall out of this fund pay the general expenses of the pilotage district". The expenses include "among other things, the purchase, charter or hire of pilot boats and the maintenance, operation and repair of same; the payment of necessary help other than salaries and expenses of the clerical staff at the pilotage headquarters; provision for the Superannuation Fund as hereinafter mentioned.

"After providing for expenses and Superannuation Fund, the balance shall be divided among the pilots as follows: The Pilotage Authority shall pay to each pilot monthly a certain sum estimated to be not more than his share of the balance. At the end of each fiscal year, after all expenses, salaries and Superannuation Fund have been paid, any balance remaining shall be divided equally among the pilots in proportion to the time worked during the year by each, but no pilot shall receive more than \$4,000 in any fiscal year."

It is further provided that after all the foregoing have been paid if any balance still remains "such balance may, at the discretion of the Pilotage Authority, be used for the improvement or betterment of the pilotage service at Saint John, or remitted to the Receiver General of Canada."

**Superannuation Fund.**—It is further provided that "Whenever a pilot's licence expires or is cancelled by reason of his age or physical or mental incapacity there shall be paid out to such pilot out of the Superannuation Fund:

"(a) If he has served less than five years as a licensed pilot the moneys he has contributed to the Superannuation Fund.

"(b) If he has served five years or over as a licensed pilot, annual payments for life of such sums as the Superannuation Fund will allow. Each superannuated pilot shall receive his proportionate share of the sum available, depending on his length of service. No pilot shall receive in any year more than an amount equal to \$35 for each year of service, and in any case not more than \$1,050."

However in case of a pilot dismissed owing to a shipping casualty, if he is over 50 years of age the annual payments are reduced by one half.

Upon the death of any licensed or retired pilot his widow is entitled, until re-marriage, to receive annual payments not exceeding one-half of the sum payable to her husband on retirement. Each child under sixteen is entitled to a sum not exceeding \$25 per year until reaching 16 years. If, however, the widow dies, her pension shall be paid to any surviving children in equal shares until they are sixteen, no child to receive more than \$250 a year.

Pilots who relinquish employment before 60 years of age are not entitled to pension from the fund.

Unmarried pilots without dependants may upon retirement elect to be paid a sum of money in lieu of superannuation.

**Leave Regulations.**—Regulations are also published governing annual leave and sick leave. After one year's service a pilot is entitled to leave of absence not exceeding 21 days. The main sick leave provisions are as follows:—

"(a) In case of illness or injury off duty, the Pilotage Authority may grant to any pilot upon satisfactory proof in his opinion of disability, sick leave on full pay not exceeding two months, and one additional month on half pay within twelve consecutive months.

"(b) Sick leave in excess of the said period may be granted by the Pilotage Authority without pay.

"(c) In the case of a pilot injured while on duty, the Pilotage Authority may grant, upon satisfactory proof of disability, leave of absence for a period of six months if necessary on full pay, and if the circumstances warrant it, a further period of six months on half pay. If a pilot is not then competent to return to his duties on account of total disability, he may be retired under the Superannuation clauses of these by-laws."

## NON-CONTRIBUTORY PENSIONS IN NEW ZEALAND

THE New Zealand Finance Act (No. 2), providing among other things for a 5 per cent increase in old-age pensions, to be operative from April 1, 1934, received the Royal Assent on September 28, 1934. The cut in pension rates made in 1932 by the National Expenditure Adjustment Act of May 10, 1932, is thus partly restored; the maximum pension, which was reduced from £45 10s. to £40 19s. in 1932, is increased to £43. The income which the pensioner may receive without reduction of the pension is increased from £39 to £41 (£52 prior to 1932). For married couples the total income of the husband and wife together with the pension or pensions may not exceed £127, as against £121 prior to April, 1934, and £143 prior to 1932.

The 36th annual report of the Pensions Department, covering the year ended March 31, 1934, has recently been published (The last report was noted in the LABOUR GAZETTE, December, 1933, page 1168). Under the Pensions Act of 1926 as amended, non-contributory old-age pensions are granted to all nationals at the age of 65 for men and 60 for women, or, where there are two or more children under 15 years of age, at the age of 60 or 55 respectively. Non-contributory pensions are also granted out of public funds to widows, miners suffering from pneumoconiosis or their widows, and blind persons. In addition, allowances are paid to families with more than two children. In all cases an income limit is prescribed, and all pensions were reduced by 10 per cent in 1932.

For the year ended March 31, 1934, the following data are given:

The average pension, the cost of pensions per head of the population and the total expenditure since the inception of the scheme were as follows:—

Class of pension	Average pension per annum			Cost per head of European population		Total expenditure to date
	£	s.	d.	s.	d.	£
Old-age.....	37	8	4	18	4	21,857,128
Widows'.....	65	5	0	4	1	4,242,957
Miners'.....	76	6	9	0	9.2	693,631
Blind.....	46	11	5	0	3.1	129,639

*Old Age Pensions.*—The number of European pensioners of 65 years and over was 29,631 on March 31, 1934; female European pensioners of 60-64 years numbered 6,155 and 1,687 Maoris received pensions. The percentage of European pensioners to the European population was 2.4. The number of pensions has grown from 11,285 in 1900 to 19,993 in 1920, 26,909 in 1930 and 37,507 in 1934.

*Widows' Pensions.*—The number of children of widows receiving allowances was 9,442, at March 31, 1934. The average number of children under 15 years of age per family was 2.04.

*Miners.*—Of the 736 miners' pensions, 617 were payable to miners and 119 to widows of miners who died of pneumoconiosis.

*Family Allowances.*—The number of children of families to whom an allowance was paid on March 31, 1934, was 53,367; the number of children in excess of two per family was 29,077. The average number of children per family was 4.39. The rate of allowance per week is 2s. for every child in excess of two, subject to reductions in respect of income (including allowance) in excess of £3 5s. plus 2s. for each child in excess of two. The majority of the allowances granted in 1933-34 were at the weekly rate of 2s. (1,653 cases out of 3,022), 1,584 families having one child in excess of two. The total amount of allowances paid during 1933-34 was £146,766, the annual value of the allowances in force at the close of the year being £151,765.

Class of Pension	Number pensions on March 31, 1934.	Annual value of pensions	Total payments in 1933-1934	New claims granted in 1933-1934
		£	£	
Old-age.....	37,507	1,403,375	1,350,982	5,509
Widows'.....	4,619	391,383	302,020	703
Miners'.....	736	56,134	56,810	70
Blind.....	438	20,399	19,306	60
Family Allowances.....	12,145	151,765	146,766	3,022

## LEGISLATION TO BE SUBMITTED TO THE DOMINION PARLIAMENT

THE Speech from the Throne at the opening of the sixth session of the 17th Parliament of Canada on January 17 outlined the legislation to be submitted by the government during the session. The Speech was in part, as follows:

I welcome you at a time when our country stands upon the threshold of a new era of prosperity. It will be for you, by your labours, to throw wide the door.

During the past year the grip of hard times has been broken. Conditions show marked improvement. Employment is increasing. Our trade is expanding. The national revenues are higher. These evidences of recovery attest the wisdom and efficacy of the measures you have taken. In these improved conditions, there may now successfully be carried forward those great tasks of reform upon which the well-being of this country depends.

In the anxious years through which you have passed, you have been the witnesses of grave defects and abuses in the capitalist system. Unemployment and want are the proof of these. Great changes are taking place about us. New conditions prevail. These require modifications in the capitalist system to enable that system more effectively to serve the people. Reform measures will therefore be submitted to you as part of a comprehensive plan designed to remedy the social and economic injustices now prevailing, and to ensure to all classes and to all parts of the country a greater degree of equality in the distribution of the benefits of the capitalist system.

Upon this plan you have made a beginning.

Reform measures approved by you at the last session of Parliament are already in successful operation. I observe with especial gratification the manner in which the Natural Products Marketing Act and the Farmers' Creditors Arrangement Act are already serving the great and urgent needs of agriculture and other primary industries. You will be invited to consider amendments to these acts which will extend the sphere of their usefulness. The organization of the Bank of Canada is nearing completion, and it will commence operations at an early date. My ministers are convinced of the value of this institution as an instrument of national policy to direct the better utilization of the credit resources of Canada.

Legislation enacted at the last session of Parliament respecting the metallic coverage of our note issue and the initiation of the

public works program have eased credit conditions and stimulated business enterprise.

Better provision will be made for the security of the worker during unemployment in sickness, and in old age.

The measures taken respecting public and private debts have done much to lighten the burden of the taxpayer and to improve the position of the farming community. My ministers are now engaged upon a survey of the national debt structure to determine what action may be practicable and advisable to effect further improvement in it.

You will be invited to enact legislation to extend existing facilities for long term and intermediate credit. . . .

My ministers are co-operating with the governments of the Prairie Provinces in a survey of those areas which have been stricken by recurring periods of drought for the purpose of determining what steps may be taken to provide a permanent solution to this grave problem.

Action will be taken to ameliorate the conditions of labour, to provide a better and more assured standard of living for the worker, to secure minimum wages and a maximum working week, and to alter the incidence of taxation so that it will more directly conform to capacity to pay.

You will be invited to enact measures designed to safeguard the consumer and primary producer against unfair trading practices and to regulate, in the public interest, concentrations in production and distribution.

You will be invited also to enact measures to provide the investing public with means to protect itself against exploitation. . . .

My government has under consideration the adoption, throughout the penitentiaries of Canada, of a system similar to that which is known in England as the "Borstal System," and is making investigations as to its operation.

My ministers have under preparation a plan for the reorganization of the government services so that they may be better equipped to discharge the onerous duties which devolve upon them. You will be invited to consider measures, the purpose of which will be to authorize the first stage in this plan of reorganization.

You will be invited to authorize the constitution of an economic council the functions of which will be to advise my ministers upon all economic questions which concern the national welfare. . . .

## RAILWAY BROTHERHOODS SUBMIT PROGRAM OF PROPOSED LEGISLATION TO THE DOMINION GOVERNMENT

THE Joint Legislative Committee of the Railway Transportation Brotherhoods recently submitted its memorandum of proposed legislation to the Dominion Government. After the presentation and discussion thereon, the delegation left with assurance that their proposals would be considered. Present with the Prime Minister, the Rt. Hon. R. B. Bennett, were the Hon. W. A. Gordon, Minister of Labour; and Hon. Hugh Guthrie, Minister of Justice. The delegation comprised Howard B. Chase, Assistant Grand Chief Engineer and Dominion legislative representative of the Brotherhood of Locomotive Engineers; Thomas Todd, representing the Order of Railway Conductors; George Snider, Brotherhood of Locomotive Firemen and Enginemen; T. B. Skelly, Brotherhood of Locomotive Engineers; and J. L. Labreche, Brotherhood of Locomotive Trainmen.

The Hon. R. J. Manion, Minister of Railways and W. L. Best, vice-president and Dominion legislative representative of the Brotherhood of Locomotive Firemen and Engineers, were both to have been present, but were unavoidably absent.

*British North America Act.*—The first recommendation consisted of the following proposed amendments to the British North America Act:—

“(a) To restrict the powers of the Senate to veto any bill passed by the House of Commons more than twice. This proposal is in harmony with the present practice of the Parliament of Great Britain;

“(b) To broaden the scope or legislative competence of the Federal Parliament empowering it to enact social legislation of general interest and welfare to the people of Canada, such as Unemployment Insurance; Old Age Pensions, etc.;

“(c) To empower the Federal Parliament to deal effectively with the regulation of highway transport as a work for the general advantage of Canada, provided that Parliament has not already this power.”

*Railway Act.*—Among the recommended amendments to this measure, the Brotherhoods urged that the Federal contribution to the Railway Grade Crossing Fund be increased from \$200,000 to \$500,000 annually, “to aid actual construction work for the protection, safety and convenience of the public in respect of highway crossings of railways in carrying out a more extensive program for the elimination of the level crossing hazard.”

Amplifying this recommendation the memorandum stated, “We are convinced that the only effective remedy against this hazard is the placing of the highway over or under the railway. It was with a view to the gradual reduction in the number of existing level crossings and their ultimate elimination, wherever practicable, that for the past ten years we have been urging upon the several Provincial Governments the adoption of a policy that will ensure the complete separation of the highway from the railway, both in the improvement of existing highways and in the construction of new roads.”

*Unemployment Relief Measures.*—Under this heading the position of the Brotherhoods was stated as follows:—

“The measures taken and assistance rendered by the Federal Government for unemployment relief merit the commendation of all interested in this worthy work. We are also in accord with the policy of municipal and provincial authorities assuming responsibility for the initial action necessary to relieve existing human needs within their jurisdiction, to the full extent of their financial ability. If unable to cope with prevailing needs, we trust that your Government will continue its policy of assisting those municipal and provincial authorities by every practicable means. Those citizens who, by force of circumstances, have been thrown away from the path of self-reliance must be fed, clothed and sheltered. This should be a matter of national concern. It would seem that the promotion of a program of necessary public works would create an opportunity for many thousands of willing workers to obtain the wherewithal to re-establish some measure of their former economic independence. Any such program should be carried on under supervision which would make impossible the exploitation of those unfortunate victims who are obliged to accept public aid as a mere human existence.

“However, all measures of this character, worthy as they may be, cannot be regarded as more than temporary expedients. They are not calculated to effectively remedy any of the fundamental causes underlying our unemployment problem and attendant inhuman conditions. For these reasons, we again confess a somewhat keen disappointment in that little, if any, scientific machinery has been set in motion, here and elsewhere, in an effort to discover the primary causes and related factors responsible for prevailing economic and

industrial conditions. With the results of science and invention in productive machinery as a substitute for man-production, together with other technological changes, increasing unemployment is inevitable. Human inventive genius has shown its ability and intelligence to produce by machinery far in excess of what can be absorbed by the ever-diminishing purchasing resources of that limited portion of employed man-power. Physical and technical sciences are continuing to advance a long way beyond our social and economic sciences, the latter being anything but up to date. These are some of the outstanding and primary factors contributing to prevailing human want.

"It was in the hope of utilizing available scientific research facilities and knowledge that our Joint Committee strongly urged the former Administration, as well as your Government, the importance of undertaking a scientific investigation into the human factors in industry and a more equitable apportionment of production. Other representative organizations, political and educational leaders support the views expressed by our Joint Committee for some years, namely, that science must now be applied through more specific fact-finding channels, having definitely in view the relations of the human factor in industry to that of the capital investment and machinery employed, in order to obtain a true estimate of their respective values to the community and the nation. In other words, there must be a revaluation of human personality and a clearer realization that the basis of human happiness must possess some measure of economic security. We are not officially committed to any particular method or machinery for undertaking this important national function. If the creation of a National Council of Social and Economic Research (the principle of which has already been accepted by Parliament) can be given effect to and such a body clothed with the necessary powers, we are convinced it would mark the commencement of a public service of vital importance which would result in inestimable humanitarian value.

"In the matter of formulating some organized method to provide benefits for the unemployed, several recommendations have been offered and your Government, we understand, has given consideration to this subject. We desire to associate ourselves with that increasing body of public opinion favourable to a national scheme of contributory unemployment insurance. We realize that any such social insurance scheme may involve difficulties, constitutional and otherwise. However, we again respectfully suggest that in any system of unemployment insurance proposed for

this country, due consideration should be given to the appropriate share to be borne by industry and the state in creating and maintaining the necessary funds for its equitable administration. If the interest on capital expenditures for unused power and rolling stock of the railways, or of unused plant or equipment in industry, due to depression or falling off of business, constitute legitimate overhead charges against the consumer, it seems to logically follow that unemployed workers from similar causes should have an equally legitimate claim upon a larger share from industry in any scheme to provide out-of-work benefits. This suggestion, whilst having somewhat far-reaching implications, seems to us to be a sound and humanitarian one and worthy of careful and favourable consideration. With other interested representative citizens, we are anxiously anticipating the Government's declaration relative to this proposed social measure."

In a recommendation to amend the Dominion Election Act, the Brotherhoods urged uniform hours on the three days when advance polls are open.

The Brotherhoods also recommended "in view of the unfair competition of canal transportation with the steam railways," that "adequate tolls be charged for all commercial transport services through our canals."

Opposition to the St. Lawrence waterways project was also registered.

### **U.S. Chamber of Commerce opposed to Shorter Work Week Laws**

The Department of Manufacture Committee of the Chamber of Commerce of the United States, in a report entitled "The Shorter Work Week," state that they are convinced that "statutory limitations on hours of work are uneconomic and disadvantageous to employees and to the general consuming public." The committee make the following recommendations:—

"Whenever standards for hours of work are considered necessary for any industry, they should be established by agreement among the preponderant number of the enterprises therein without any attempt at their determination through the arbitrary process of legislation or administrative orders.

"Governmental action respecting hours and wages should be confined to approving and enforcing such basic standards for maximum hours and for minimum wage rates for unskilled labour as are considered necessary to prevent unfair competition. Adjustment of wage scales above the minimum should remain the responsibility of individual enterprises free from governmental control."

## LEGISLATION PROPOSED BY ORGANIZED LABOUR IN THE PROVINCE OF QUEBEC

### Quebec Executive Committee of the Trades and Labour Congress of Canada

The Quebec executive committee of the Trades and Labour Congress of Canada, composed of L. A. Beaudry, chairman, G. R. Brunet, P. Lefèvre and O. Fleury, together with representatives of international organizations, waited on Premier Taschereau and members of his cabinet, and presented legislative proposals which had been adopted at recent conventions. The committee stressed the difficulties now faced by the workers and the necessity for immediate economic readjustments, and especially called attention to the problem of the unemployed youth of the province. It was suggested that the necessary co-operation be given by the Provincial Government in connection with the proposed measure of unemployment insurance under Federal government control.

Other measures proposed were as follows:—

Amendment to the Workmen's Compensation Act making the yearly salary of the workers a basis for determining the amount of compensation.

Repeal of recent amendments to the Workmen's Compensation Act which reduced the benefits under the Act.

Appointment of a labour representative on the provincial Compensation Board.

The placing of hotel and restaurant employees under the provisions of the Workmen's Compensation Act.

An interprovincial conference to consider legislation to establish a shorter work day and work week in all industries throughout the Dominion.

One day's rest of twenty-four consecutive hours each week for all persons employed in places of amusement operating seven days a week.

Strict enforcement of the existing orders under the Hours of Work Act (1933), establishing the 40-hour week in the building industry. (LABOUR GAZETTE, July, 1933, page 701; August, 1933, page 776.)

An extensive building and public works program with trade union conditions and observance of the 6-hour day and 5-day week.

Adoption of the Dominion Old Age Pension Act by the province.

Legislation to establish a system of allowances to needy mothers as recommended by the Royal Commission on Social Insurance appointed by the Quebec Government (LABOUR GAZETTE, February, 1933, page 161).

Sickness and disability insurance legislation.

Regulation of motor vehicle transportation under the control of the Board of Railway Commissioners or a similar authority.

Legislation restricting and regulating the use of one-man cars by street and electric railways.

Stricter regulation and more stringent enforcement of existing laws governing the use of dangerous machines or poisonous materials in industry.

Hygienic conditions to be established in hotels and restaurants throughout the province.

Printing establishments to be brought under factory regulations.

Legislation to govern the erection, operation and supervision of all hoisting machinery used in connection with building operations.

That passenger elevators be equipped with safety doors, distinct and in addition to doors leading from landings into elevator shafts.

That workers be prohibited from carrying certificates covering both plumbing and steam-fitting and the electrical trades.

Legislation providing for the employment of two licensed operators in each theatre during public performances and stricter examination of projectionists.

Periodical inspection of motor vehicles, particularly of brakes and headlights.

That fair wage regulations be made applicable in all cases where Government grants or subsidies are involved.

That instructions be given to officers preparing fair wage lists to discontinue the practice of subdividing trades, thereby creating specialist classes.

Free instruction in public schools.

Amendment of the Bankruptcy Act so that workers' claims may come first.

Legislation giving employees the right to organize, bargain collectively, secure signed agreements and have representatives of their own choice, with government assistance when necessary, in order to secure satisfactory adjustment of all disputes.

That the political party of candidates be shown on ballot paper instead of their occupation, and that proper accommodation be provided for voting purposes.

## Federation of Catholic Workers of Canada

In the memorandum recently presented by the executive committee of the Federation of Catholic Workers of Canada to the Government of the Province of Quebec it was declared that labour legislation in the province had made much progress, especially since the establishment of the provincial Department of Labour.

### Collective Labour Agreements Extension Act

Special mention was made of the beneficial results obtaining under the Collective Labour Agreements Extension Act and of the further benefits which will accrue to the working class when the provisions of the Act are more generally applied. To make the Act more effective the following amendments were suggested:—

That the holding, by all resident workers, of a "qualification certificate" issued by a labour union or board of examiners be made compulsory.

Penalties for non-observance—first offence, fine of \$500; second offence, suspension of employer's permit for six months.

That a board of examiners be established at the request of either party to the agreement.

That where a collective agreement cannot, owing to lack of co-operation by employers, be established in an industry in which there is a labour union, the Minister of Labour shall be given power to call together interested parties, and that similar procedure as provided under the Women's Minimum Wage Board be followed.

A more general application of the provisions of the Act relating to apprenticeship agreements, and wages and hours of labour.

That funds be provided to the joint committee by the government to insure carrying out of agreements.

Extension of the provisions of the Act to cover all wage earners of the province.

### Other Proposals

Abrogation of the latest amendments to the Workmen's Compensation Act, relating to selection of doctor, time limit for payment of indemnity and rates of indemnity and that the former provisions be re-enacted; and the appointing of a representative of the Workmen's Compensation Board at Chicoutimi.

A social insurance system for the province, beginning with old age pensions.

That the Women's Minimum Wage Act be amended by: (1) extending of the provisions of the Women's Minimum Wage Act to all female wage earners of the province; (2) restraining the board from granting permits to compute wages on a percentage basis; (3)

granting inspectors the right to investigate complaints and determine the rate of wages in connection with piece work, where the hourly rate of wages is set by an order of the Board, and further that an employee shall not be required to punch the clock more than four times daily, twice on entering shop and twice on leaving; (4) that all future orders of the board be issued on the basis of the latest order adopted.

That the time limit for claims for arrears of wages be fixed at two years (instead of one year).

That the dismissal of an employee for the reason of union activity be considered an offence punishable under the Conciliation and Labour Act.

That road work and other undertakings for the alleviation of unemployment be given to private contractors, with provisions for fair wages and working hours, the rates of wages on road work to be governed by those paid on building construction in the same district.

That when a worker is re-employed after a period of unemployment his wages be exempted from seizure for six months.

### AMENDMENTS TO THE COMPANIES ACT

That encouragement be extended by the government to municipalities to own their electrical services, financial assistance being granted if necessary.

Repeal of Article 7 of the Sunday Observance Act (This article permits the observance of another day from conscientious motives).

That the government investigate the possibilities of establishing families on farms.

Establishment of a provincial Economic Council.

The setting up by the government of a Superior Council of Labour, to which would be referred: labour legislation; closed shop policy; collective agreements; strikes; arbitration; penalties imposed by law, etc.; this council to include among others, representatives of labour and industry.

That the measuring of lumber be done according to cubic measure and by a duly certified lumber measurer.

That pensions be granted to civil servants in the outside service.

Establishment of the double-platoon system in fire departments of cities having a population of 25,000 or over.

Incorporation of the Association of Blacksmiths (horseshoers) of the Province of Quebec.

That certificated stationary engineers be not required to secure a licence for the purpose of performing such work as installation, improvements, alterations or repairs, and that this

regulation be made applicable to all cities and towns of the province.

Prohibition of the use of one-man cars on street railways.

Enactment of a law to govern the hours of labour as well as the minimum rate to be charged customers by barbers.

### New Labour Organizations in Canada

The Department has received reports of the formation of the following organizations, the first three of which have been chartered by the Trades and Labour Congress of Canada:

Cleaners and Dyers Federal Union No. 57, Toronto, Ont. President, W. Rodgers; Secret-

ary, Miss H. Andrews, 362 Keewatin Ave., Toronto, Ont.

London Federal Labour Union, No. 25. President, J. A. Russell, 188 Egerton St., London, Ont.; Secretary, A. W. Whitelaw, 68 Jacqueline St., London, Ont.

Saskatoon Civic Employees Federal Union, No. 59. President, Alfred E. Cooke, Saskatoon, Secretary, P. W. Farrar, 839 Main St., Saskatoon, Sask.

Dress Cutters Union, No. 205, International Ladies' Garment Workers' Union. Business Manager, Frank Breslow, 395 St. Catherine St. W., Montreal, Que.; Secretary, P. Titleman, 395 St. Catherine St. W., Montreal, Que.; General Organizer, Bernard Shane, 395 St. Catherine St. W., Montreal, Que.

## ANNUAL REVIEW OF EMPLOYMENT IN CANADA, 1934

ACCORDING to statistics furnished the Dominion Bureau of Statistics by leading employers, the recovery in industrial employment in evidence from the second quarter of 1933 continued with considerable force in 1934. The fluctuations differed from those of the preceding year, but the gains then made were consolidated and extended until employment in 1934 was in greater volume than in either 1933 or 1932. A significant feature of the revival recorded in the twenty months elapsing since the low point of employment in the depression was reached, has been its widespread nature, all five economic areas, the leading industrial cities and principal industries sharing to a greater or less degree in the improvement.

During the year under review, monthly statements were received from an average of 8,690 firms having an average payroll of 893,653<sup>1</sup> employees. Their staffs ranged from 821,131 on January 1 to 941,165 on July 1, when activity generally was at its maximum for the year. The index (average 1926 = 100) then stood at 101.0 the highest in thirty-one

months; the 1933 peak was 91.8 on December 1, while the maximum so far reached in this record of fourteen years was 127.8 at the beginning of August, 1929, when the payrolls of the 6,840 firms then co-operating aggregated nearly 1,100,000. The mean index was 96.0 in 1934, compared with 83.4 in 1933, 87.5 in 1932, 102.5 in 1931, 113.4 in 1930, 119.0 in 1929, 111.6 in 1928, 104.6 in 1927, 99.6<sup>2</sup> in 1926, 93.6 in 1925, 93.4 in 1924, 95.8 in 1923, 89.0 in 1922 and 88.8 in 1921.

The progress made in 1934 as compared with 1933 is summarized in the accompanying table, which shows the average number of reporting firms and of their employees and the mean index numbers for the twelve months, January 1-December 1, 1934. The changes since 1933 in these three sets of figures are also given, those for the indexes being shown in points and also in percentages. With rare exceptions, the 1934 figures are higher than those for the preceding year, but where the reverse is the case, the decline is indicated by a minus sign. This table calls only for brief explanation since the employment situation in the various localities and industries is discussed in considerable detail in subsequent pages.

The table shows a gain of 6.8 per cent in the reporting employers,<sup>3</sup> accompanied by an

<sup>1</sup> The number of wage-earners reported in the Census taken in June, 1931, was 2,570,097, of whom 2,100,139 were at work on the date of the Census. The firms reporting for June 1, 1931, showed an aggregate payroll of 940,875 persons, or 44.8 per cent of the census total, which included the professional classes (notably teachers and public administration employees), agricultural workers, domestic servants and other important classes of workers not included in the monthly surveys of employment. When the census figures are adjusted, so far as is possible, to include only the classes of workers represented in the monthly surveys, the proportion of the latter to the former rises considerably. Since 1931, the number of co-operating firms has grown, with a consequent increase in the proportion of the total working population represented in these statistics.

<sup>2</sup> As the average for the calendar year, 1926, including figures up to December 31, 1926, is the base used in computing these indexes, the average for the 12 months, January 1-December 1, 1926, generally shows a slight variation from 100.

<sup>3</sup> The general increase in the number of firms co-operating with the Dominion Bureau of Statistics must be noted in connection with the increases in the workers represented in the monthly surveys of employment. The gain in the former however, does not wholly result from the establishment of new industries, nor from more regular co-operation on the part of these

increase of 16.3 per cent in their staffs, and of 15.1 per cent in the average index for 1934 as compared with 1933. Of the last two comparisons, undoubtedly that between the index numbers affords the more reliable guide to changes in the employment situation, since allowance is made therein for the inclusion of new industries, as well as for the cessation of defunct businesses.

previously on the mailing list, but is also due to the fact that a growing number of firms are now furnishing statistics in detail for locality and industry. Thus, the different branches of a business organization in various centres appear in the tabulation as separate firms in the centres where establishments are maintained. Similarly, employers appear under each of the industries for which separate reports are furnished. The number of firms as used

While improvement was recorded in all five economic areas in 1934 as compared with the preceding year, it is evident that Ontario contributed an unduly large proportion of the increase, viz., 54.1 per cent, in comparison with the proportion of 43.0 per cent that the average employees in this province constituted of the total reported for the Dominion. That the recovery in the cities has lagged be-

here might more precisely be described as the number of reports tabulated, but the former expression is generally adhered to in accordance with statistical usage in other series and other countries, and also as presenting a better visualization of the nature of the enquiries. On the whole, the establishments now being added to the mailing list have payrolls that are smaller than the average, being in many cases the less well known businesses.

hind that for the country as a whole, is partly accounted for by the unduly large representation therein of the industries which have shown disproportionately small increases during 1934, while the concentration of single homeless unemployed men in labour camps outside municipalities also contributed to the disparity. Of the eight centres for which separate tabulations are made, Toronto recorded the largest advance in actual numbers involved, amounting to nearly 32 per cent of the total gain in these municipalities, while the increases in Montreal accounted for some 24 per cent of this advance.

Important though the gains in manufacturing were during 1934, they were not in proportion to the number of workers reported in this group of industries, which employed 50.4 per cent of the 1934 average of workers in all industries, but contributed only 39.2 per cent of the general increase in 1934 over 1933. However, it is probable that part of the increased activity in factory production is expressed in the extension of working hours, rather than in additions to personnel or supplementing such increases. On the other hand, logging, with 3.9 per cent of the average employees, recorded 13 per cent of the total workers added to the staffs of all employers; construction reported 14.3 per cent of the aggregate workers, but 32.8 per cent of the average increase during the year. To some extent this is due to an increase in the numbers of men employed on a wage basis by the Dominion and Provincial Governments on unemployment relief projects. In transportation, services and trade, the improvement, though substantial, was not in proportion to the relative importance of these industries in the industrial distribution of the workers represented in the monthly surveys of employment.

### The Fluctuations of Employment in 1934

The index number of employment (based on the 1926 average as 100) stood at 88.6 on January 1, the 1934 low point. The movement in the two following months was decidedly upward, the gains being substantially above the average indicated in the years since 1921. At the first of April, there was a decline, seasonal in character, but rather intensified by the fact that Easter last year fell on April 1, with its consequent slowing up of industry over the holidays. From May 1 to July 1, there were important increases, which, on the whole, were rather greater than the average experienced in the years since 1921. The next two months saw a reversal of the favourable movement, but this was resumed at the beginning of October and continued in November, while seasonal reductions were again indicated on December 1. There were, therefore, greater fluctuations during 1934 than in the preceding year, when steady declines

from January 1 to April 1 had been succeeded by uninterrupted gains during the remaining months. The increase from January 1 to December 1 amounted to 11.6 per cent; since the average advance between these two dates in the last thirteen years has been slightly more than 7 per cent, this represents a substantial betterment during the year.

The general index of employment is influenced to some extent by public works undertaken for the relief of unemployment.<sup>1</sup> This factor does not, however, directly enter into the situation in many other important industries, which during 1934 reported marked improvement,—notably manufacturing, logging, mining, trade, etc. Factory employment is especially important in this connection, since approximately half of the total workers included in the surveys earn their livelihood in manufacturing. This division showed uninterrupted recovery during nine months of 1934—from January 1 to October 1. This was the longest period of unbroken expansion reported since the record was commenced in 1921, being longer by one month than that indicated in 1933. During these months the reporting employers added some 72,200 persons to their staffs, a number that compared favourably with the increase of just over 61,400 reported by the manufacturers furnishing data for the preceding year, and reflected an even more noteworthy improvement when contrasted with the decline of over 3,900 operatives reported by the factories furnishing data for the same period of 1932. The index, rising from 80.0 at the opening of 1934 to 94.4 on October 1, showed a gain of 14.4 points or 18.0 per cent in these months. Curtailment of a seasonal character affected the situation in the last two months of the year, but on the whole, these were on a smaller scale than has been usual in the thirteen preceding years for which statistics are available, and the index of factory employment, at 91.3 on December 1, was 11.3 points or 14.1 per cent above the January 1 index. The importance of this percentage gain is emphasized when it is compared with the average increase in the index from January 1 to December 1 in the years 1921-1933, which amounts only to 7.4 per cent.

<sup>1</sup> The number of man-days worked on a wage basis as reported to the Dominion Unemployment Relief Commissioner by the provinces and Dominion Departments for the eleven months January to November, 1934, was 8,072,993. There were also 8,867,559 man-days relief work afforded in provincially and federally operated camps where the unemployed were cared for and given useful work in return for subsistence and a small cash allowance. These figures are subject to revision when final reports are received. During the year 1933, the number of man-days worked on a wage basis was 1,643,111, and the number of man-days relief work afforded on a subsistence basis was 9,714,701.

In connection with the statistics on employment herein reviewed, it may again be mentioned that during the depression there has been a very general movement to retain as many as possible on the working force by reducing the daily or weekly hours worked. The earnings of the persons included in the monthly reports on employment, if available, would in this way doubtless have shown in many cases a greater decline than the number on the payrolls upon which the index numbers are calculated, while similarly, an improvement in the business outlook will be reflected in many cases by an extension of the working hours rather than by an immediate increase in the personnel. In the United States, the provisions of the National Industrial Recovery Act have during 1933 and 1934 accentuated this phase, the increase in the numbers on the payrolls frequently being at the expense of a reduction in the time worked by those already in employment. This is illustrated in the statistics of earnings, which in the United States are collected from the firms who furnish monthly data on employment. Thus, the preliminary index of employment in manufacturing on November 15 (the latest available date), stood at 76.8 per cent of the average for the three years, 1923-1925, while the index of earnings calculated on the same base, was only 59.5 per cent on the same date.

Another point may be noted regarding the Canadian index numbers of employment. Where employers are obliged to curtail their production, it sometimes happens that the date to which the monthly survey relates marks the low point in activity for the month, employment in some cases being in greater volume on almost any other working day of the month. This factor is of greater importance when the numbers at work fluctuate about a low level than when staffs are more normal.

An analysis of the data furnished by employers shows that all industries except communications shared in the improvement noted during 1934 as compared with the preceding year and also with 1932. It has already been stated that manufacturing experienced the longest period of expansion on record in the years since 1920; to this recovery most of the various branches of factory employment have contributed more or less extensively. Logging was unusually active, the average index, at 124.7 having, been exceeded in this record only by that of 125.8 reported in 1929. Mining advanced during nine of the twelve months, with the result that employment in that group was generally brisker than in any other year since 1930. Construction gained considerably during the busy season, and was generally higher than in 1933 and 1932, though continuing at a low level as compared with

years of normal activity. Services and trade afforded a greater volume of employment, stimulated to some extent by a better tourist season, as well as by the general improvement in business. In connection with these two industries, it may again be pointed out that in such lines of business, establishments as a rule cannot be wholly closed down for longer or shorter periods, as in manufacturing plants, with the result that the situation is frequently met by cutting down the normal working day or week for the individual employee in order to retain as many as possible on the payroll. This tends to keep up the employment index, since the methods used in rotating the staff are usually not reflected in the monthly employment data.

### Employment by Economic Areas

The recovery in industrial activity during 1934 extended to all five economic areas, but to a varying extent; the situation at the end of 1934 was substantially better in each of these districts than it had been at the opening of the year, and also than it was at the end of 1933. The greatest proportional gain between the 1934 low and high points occurred in Ontario, where the maximum of activity was at July 1; the index then stood at 109.9, being 18.7 points higher than the minimum of 91.2 recorded on January 1. Employment in all five economic areas was greater, on the average, than in the twelve months of 1933. In the Maritime Provinces, there was a gain of 18.4 per cent in the 1934 mean over that for the preceding year, in Quebec, of 11.8 per cent; in Ontario, of 20.3 per cent; in the Prairies, of 4.4 per cent; and in British Columbia, of 15.9 per cent.

*Maritime Provinces.*—Employment in the Maritime Provinces showed improvement in the first quarter of 1934, this being contrary to the usual seasonal movement at the time of year. At the first of April, however, there was a considerable decline, which reduced the index to 95.1, its low point for the twelve-month period. The upward movement was shortly resumed, and there were continuous gains from May 1 to December 1, the longest period of uninterrupted expansion reported in the fourteen years for which records are available. The indicated peak of industrial employment was at the beginning of December, when the index stood at 106.9; this was 10.2 per cent higher than at the opening of 1934, and 14.5 per cent above the 1933 maximum of 93.4 also on December 1. Activity in each month of last year was greater than in the same month of the preceding year.

Manufacturing as a whole showed decided gains in employment; the index was consist-

ently higher throughout the year, the mean being at 91.8, as compared with 77.2 in 1933. The December 1, 1934, index, at 95.9, was 14.7 per cent higher than that for the same month in the preceding year. In the textile, iron and steel, lumber and pulp and paper groups, activity was generally greater than in 1933; the indexes, with few exceptions, were above their levels in the same month of the year before, and in each case, also averaged considerably higher than in 1932. However, employment in these branches of manufacturing (with the single exception of pulp and paper mills) was substantially below the 1926 basic average. Unsatisfactory export conditions continued to affect transportation, as in the last few years, and this industry afforded, on the whole, practically the same volume of employment in 1934 as in 1933, when activity had been reduced as compared with the immediately preceding years. Communications were generally quieter, in spite of the improvement over 1933 that was indicated towards the close of the year. Construction on the whole was more active, partly in consequence of works undertaken for the relief of unemployment. Services afforded greater employment, and trade also registered a generally higher level of activity. Mining showed consistent betterment over 1933. Considerably greater activity was indicated in logging, in which the index of employment averaged 203.0, compared with 88.6 in 1933 and 62.3 in 1932. The seasonal increases in bush operations during the winter of 1933-34 and in the present autumn and winter have been exceptionally large, resulting in the highest average of employment in the record of fourteen years. The aggregate payrolls of the 613 reporting employers in the Maritime Provinces averaged 71,401 persons, as compared with the mean of 59,564 employed by the 584 firms co-operating in the preceding year.

*Quebec.*—With only one exception, the trend of employment from January 1 to November 1 was uniformly favourable in Quebec, although the gains were generally on a smaller scale than those noted in 1933. During this period, the only decline indicated occurred on April 1, when shutdowns over the Easter holidays, together with exceptionally large seasonal losses in logging and snow clearing operations resulted in a pronounced recession in employment. The index then rose from its 1934 low of 85.1 on April 1 to its maximum of 98.0 on November 1, or by over 15 per cent. The 1934 peak was 11.7 points higher than at the beginning of the year, and 5.8 points above the level of the same month in 1933. Employment in the year just closed fluctuated between narrower limits than in 1933, the index advancing by some thirteen points between the

trough and the peak, as compared with a variation of over nineteen points in the preceding year, when employment in Quebec had reached a very low level; however, activity in each month of 1934 was greater than in the corresponding month in the preceding year. The labour forces of the 2,080 co-operating employers varied between 231,193 and 268,364 workers on the dates of minimum and maximum activity, respectively, averaging 249,996 for the twelve months; while the mean index was 91.7; the 1933 average of the 1,975 reporting firms was 221,596 and the index averaged 82.0.

Employment in manufacturing as a whole was brisker during the entire year than in 1933, improvement in this comparison being indicated each month, while the 1934 index averaged 92.1, or 10.6 per cent higher than in the preceding year. Practically all classes of manufacturing recorded a larger volume of employment, the improvement in the major groups,—lumber, pulp and paper, textiles and iron and steel,—was especially important, emphasized by the large number of workers engaged in such industries. Employment in communications was less in the twelve months, but general expansion was shown in the other non-manufacturing divisions, whose indexes in each case averaged several points higher than in 1933. In the logging group, activity was substantially greater throughout the year under review, the mean index standing at 202.5, as against 109.3 in 1933, and 60.3 in 1932. Mining was also decidedly more active in 1934 than for several years past, largely due to gains in the metallic ore branch; the mining index averaged 123.0, as against 101.4 in the year before. The index in construction was higher than in the immediately preceding years, averaging 59.8, or six points above the 1933 mean. Employment in trade was generally well maintained; the index in five months was at a lower level than in the same months of 1933, but the average of 128.0 compared favourably with that of 125.4 in the preceding year. Services, though in a more favourable position than in 1933, showed only moderate activity during the year under review; it may be repeated that many persons on the payrolls of the reporting trading and services establishments, as in manufacturing and various other groups, were probably not employed full time.

*Ontario.*—An average staff of 384,456 employees was registered by the 3,830 firms furnishing data in Ontario; the mean index was 101.3 in 1934, or 17.1 points higher than in the preceding year, when the payrolls of the 3,588 co-operating establishments had averaged 316,865. Employment showed greater fluctuation during 1934 than in the preceding

year, there being a range of nearly 19 points between the maximum and minimum indexes. The situation indicated each month was better than in the same month of 1933, the December 1 index, at 101.7, being nine per cent higher than at the same date of 1933.

Manufacturers, on the whole, reported greater activity throughout 1934, although employment continued in lesser volume than during the basic year, 1926. During the year under review, as in 1933, the index was slightly lower than the manufacturing index for the second great manufacturing province—Quebec; this was again mainly due to a comparatively low level of activity in the iron and steel industries, which are especially important in the industrial composition of Ontario; a comparison of the data shows, however, that the heavy industries in Ontario experienced relatively greater recovery during 1934 than was the case in Quebec. The indexes in lumber and textiles were substantially higher in the latter province than in Ontario. Employment in pulp and paper, lumber, textile, metal and other factories was brisker throughout the year than in 1933, and in each case was also in greater volume at the close than at the opening of the year under review. Iron and steel advanced steadily from January 1 to June 1, 1934, succeeded by uninterrupted contractions in the remaining months. Nevertheless, the situation was better throughout the year than in 1933, the index averaging 72.1, as compared with 58.3 in the preceding twelve months. In the textile group, activity gained month by month from January 1 until May 1, followed by fluctuation in the latter part of the year; these, however, were about a higher level than in 1933, and the 1934 mean of 104.1 was over seven points above that of the previous year.

Operations in logging camps throughout 1934 were at a relatively high level in comparison with the last few years, the index, even at its lowest point of 51.1 on June 1, being over three points above the average of 47.9 indicated in 1933; the 1934 mean was 95.9. The revival of industry in the United States, together with the continued benefits of the agreements made at the Ottawa Imperial Economic Conference in 1932, have materially contributed to the improvement in the lumbering industries. Mining was particularly active, employment in the autumn and early winter reaching the highest level in the record; on December 1 the index was 175.4, while in the twelve months it averaged 154.5, as compared with 127.2 in 1933. The production of metallic ores, which accounts for most of the persons engaged in mining in Ontario, continued at an unusually high level during the year just passed, the premium paid on gold again pro-

viding an important stimulus to production. The number employed in communications was smaller than in 1933. Transportation, in all but three months of 1934, was brisker than in the corresponding months of the preceding year; the mean index at 75.2 was fractionally higher than that of 74.4 in 1933. Services also reported greater activity than in the year before, to some extent reflecting improvement in the tourist trade. Construction generally afforded more employment, partly in consequence of unemployment relief undertakings. Private and commercial building, however, was also in greater volume. The index averaged 158.8 in the twelve months of 1934, compared with 86.2 in 1933 and 101.1 in 1932. The volume of employment in trade was greater throughout 1934 than in the preceding year, the index averaging 125.3, or 7.7 points higher than in 1932.

*Prairie Provinces.*—Employment in the Prairie Provinces showed rather less variation than in the preceding year, the index ranging from 83.3 on April 1 to 96.5 at the beginning of November, as compared with a spread of over twenty points between the 1933 high and low. The situation at the beginning of each month except October was better than on the same date of the year before, but employment did not attain so high a peak as in 1933, when the maximum index was 98.7 on October 1. The average for the twelve months, however, was 90.0, or 3.8 points more than in the preceding year, while it was the same as in 1932. As has been pointed out in previous annual reviews of employment, the unsatisfactory conditions prevailing in agriculture since the autumn of 1929 have caused much unemployment among farm workers, who are ordinarily not represented in these statistics, but for many of whom work or relief has had to be found in recent years. This has resulted in large programmes of highway construction and maintenance and in the formation of labour camps, accommodating considerable numbers of distressed agricultural and other workers. The 1,285 employers furnishing data in Manitoba, Saskatchewan and Alberta had an average staff of 112,868 persons during the year, while in 1933, the 1,186 co-operating firms reported an average payroll of 106,839 workers. Activity in manufacturing, logging, mining, transportation, construction and maintenance, services and trade was generally greater during 1934 than in the preceding year. Within the manufacturing group, there were advances in the textile, lumber, iron and steel and some other industries, while in the pulp and paper group there was improvement in some months of the year under review as compared with 1933, but this was not sustained and the annual average was slightly

lower. Logging, though still at a low level, was much brisker than in the preceding year.

*British Columbia.*—The 882 firms reporting in British Columbia employed an average working force of 74,870 employees, while in the preceding year a mean of 63,762 was reported by 797 employers; the 1934 index averaged 90.4, as compared with 78.0 in 1933, 80.5 in 1932, 95.5 in 1931, 107.9 in 1930, 111.5 in 1929 and 106.4 in 1928. All groups of manufacturing showed heightened activity during 1934. The lumber, pulp and paper, textiles, iron and steel and other factories reported a decidedly better situation at the end of 1934 than at the beginning, while the indexes also averaged higher than in the preceding year. The lumber trade has benefitted substantially in recent months from the Ottawa Imperial Economic Conference agreements, as well as from quickened demand in the markets of the United States, the improvement extending to the logging, as well as the lumber industry. Employment in these two branches, however, continued at a low level in comparison with 1930 and earlier years of the record. Mining, transportation, construction and maintenance, services and trade were brisker during the greater part of 1934, the mean index in each of these being higher than in 1933. On the other hand, communications afforded rather less employment.

### Employment by Cities

Improvement in industrial employment was reported in seven of the eight centres for which statistics are segregated, viz., Montreal, Toronto, Ottawa, Hamilton, Windsor, Winnipeg and Vancouver, while in the eighth—Quebec City—the index averaged the same as in 1933. A significant feature of the situation is that the recovery in the cities has generally been at a slower rate than in the Dominion as a whole. Thus, in 1934, 46 per cent of the average number of co-operating firms in Canada were located in these eight municipal areas, and they had 40.8 per cent of the average employees covered in the monthly surveys; of the total additions to staffs during the year under review, however, they reported only 20 per cent. The index numbers for the eight cities showed an average advance of 6.3 per cent while that for the Dominion as a whole was 15.1 per cent. Various reasons contribute to this disparity in the relative revival of business activity in the cities and elsewhere in the country at large; the concentration of single homeless unemployed men in construction camps outside the municipalities; the unusually large gains in industries which ordinarily are operated in the rural areas, such as mining, logging, lumbering and canning; the forces,

legislative and other, which operate to maintain wages in the cities at a relatively higher level than in towns and villages, so tending to hasten recovery in the smaller centres at the expense of the larger units of population where taxes, rents, etc., are necessarily higher. These are probably among the most potent reasons for the apparently retarded revival in the cities. The reports showed that employment, as in the preceding year, was maintained at a higher level in Ottawa and Quebec City than in the other centres above named, while the lowest indexes were indicated in Winnipeg, Hamilton and Montreal. The greatest percentage of improvement shown by the 1934 index numbers over those for 1933 were in Windsor and Hamilton.

*Montreal.*—The staffs of the 1,200 Montreal firms making returns averaged 125,095 persons, while the mean index, at 84.5 was 4.3 per cent higher than that for the preceding year. The trend of employment was generally upward from January 1 to November 1; the gains, however, resulted in the addition of a rather smaller number of persons to the payrolls of the co-operating employers than in 1933. The index rose from 78.0 at the opening of the year to 87.3 at the beginning of November, or by over 11.9 per cent. Manufacturing generally was more active in every month of 1934; the index averaged 85.7, as compared with 79.9 in the preceding year, and with 85.6 in 1932. The vegetable food group showed a higher level during eight months of last year than in the same months of the year preceding, and the average index was slightly higher. The printing, publishing and paper goods, textile, iron and steel and other divisions reported improvement on the whole as compared with 1933, while tobacco and beverage factories were generally slacker. Communications consistently afforded less employment. Transportation was brisker in most months than in the same period of 1933. Construction firms reported smaller payrolls during seven months of 1934, and their average employment during the year was lower. In trade also the index in six months was below that for the same period of 1933, but the annual average was fractionally higher, at 120.7.

*Quebec City.*—The 1934 variation between the minimum and the maximum of employment in Quebec amounted to over thirteen points in the index, a larger range than in 1933, but the average index was unchanged at 95.1. There were monthly increases from February to September 1, with only one exception, while the trend in the last quarter was unfavourable. The staffs of the 159 employers furnishing data averaged 12,333. Activity in

manufacturing generally was at practically the same level, the mean index standing at 94.0, as against 93.9 in the preceding year. Leather plants, on the whole, were not so busy as in 1933, but other branches of manufacturing showed moderate improvement in this comparison. The mean index in transportation was lower, while that for construction was higher in nine months, averaging 95.5 as against 91.0 in 1933.

*Toronto.*—As in 1933, employment showed moderate improvement during eight months of 1934; at the close of the year the index was 7.1 points higher than at the beginning, while the annual mean of 93.5 compared favourably with that of 87.5 for 1933. The number of employees of the 1,281 firms co-operating during the year under review averaged 112,765, while in the year before the mean payroll of the 1,211 reporting employers was 104,790. The manufacturing industries showed a better situation each month of 1934 than in 1933; within this group, iron and steel, printing and publishing and other manufacturing industries reported consistently greater employment in the twelve months of the year under review, while in vegetable food and textile factories activity was greater in most months, so that the average indexes were higher than in the preceding year. Transportation during the greater part of 1934, and communications in every month, were slacker than at the same date in 1933. On the other hand, employment in trade and construction was better maintained in 1934 by the firms furnishing returns, improvement being reported each month over the same period of the preceding year. In Toronto, as in the other centres, some establishments continued to retain a considerable proportion of their ordinary staffs by reducing the hours worked by their employees.

*Ottawa.*—There were almost uninterrupted advances in Ottawa from the first of the year to August, after which the tendency was downward. On the whole, however, employment was brisker than in 1933, the index averaging 99.5 in 1934, compared with 90.2 in the preceding year. Manufacturing reported a larger volume of employment, all branches showing generally greater activity. Construction and trading establishments also reported larger staffs, improvement having been noted in every month of 1934. An average payroll of 12,701 workers was employed by the 165 firms whose data were received, as compared with the 1933 average of 11,465 reported by 156 employers.

*Hamilton.*—Employment in Hamilton increased during eight months of the year under review, with the result that the December 1 index of 86.1 was nine points above the level

of January 1; it was also higher by some six points than on December 1, 1933, while the mean for the year under review was 84.1, as compared with 74.6 in the preceding year. Manufacturing showed gains from month to month from January to August, being also brisker throughout 1934 than in 1933. Textiles, iron and steel, electrical appliances and other groups of factory employment were more active, improvement over 1933 being indicated in most months of the year under review. Construction and trade, on the whole, also afforded heightened employment in 1934. The 258 co-operating firms reported an average working force of 26,744 persons; in 1933, 241 establishments had 23,456 workers, on the average.

*Windsor and the adjacent Border Cities.*—The index number of employment in the Border Cities averaged 93.1 and the recorded payrolls of the 153 co-operating firms averaged 12,456 workers in 1934, compared with the mean index of 75.9 and 9,717 employees in 136 establishments as reported during the preceding year; in 1929, when employment was at its maximum for this record, the average index was 153.2. Manufacturing showed general improvement as compared with 1933, the index being higher in all but two months than at the same date in the preceding year, and averaging 97.1, or 21 points higher than in 1933. The automobile and related industries were more active, though they were still operating at a relatively low level as compared with boom years. Construction was quieter in five months of the year under review, on the whole, was slightly brisker than in the year before, although continuing in very small volume. Owing to the employment policy followed by some firms in the Border Cities, it frequently happens that activity on the date of these enquiries is at a lower level than on almost any other day in the month; the practice of reducing working hours rather than personnel is also an especially important factor in the situation in these centres.

*Winnipeg.*—Conditions in Winnipeg improved to some extent during 1934; but employment was still dull, the index being lower than in any other of the leading cities. The geographical position of Winnipeg has caused the city to be particularly affected by the unsatisfactory markets for agricultural products prevailing at home and abroad, as well as by other factors of more general application. Improvement was noted in eight months, while the gains in general were on a larger scale than for several years past; activity on December 1 was higher than at the beginning of 1934 and also than on December 1, 1933. The mean index for the year was 82.9, compared with 80.2 in 1933, 86.6 in 1932, 97.1 in

1931, 107.6 in 1930 and 112.3 in 1929. The manufacturing division as a whole was brisker in every month of the year under review than in 1933; considerable improvement occurred in the food and textile groups, while iron and steel plants recorded no general change, and paper and printing and publishing, on the whole, afforded less employment. Transportation, construction and trade generally reported a larger volume of employment. An average staff of 35,197 was employed by the 421 firms whose data were received during the twelve months under review, compared with 33,497 reported by 389 establishments in 1933.

*Vancouver.*—During 1933, employment in Vancouver had advanced during five months; the 1934 period of expansion extended over eight months, and the index averaged 87.4, or 4.4 points more than in the preceding year. The index on December 1, at 89.0, compared favourably with that of 82.2 recorded on January 1; in 1933, there had been a gain of 2.4 points between January 1 and December 1. Data were furnished by some 375 firms with a mean payroll of 27,435 workers in 1934, while in 1933 the averages were 346 establishments and 25,715 employees. The unemployment existing in Vancouver, as in other industrial centres, is doubtless greater than would be indicated in these surveys of employment, owing to the unemployed transients who gravitate there, although in all probability they have never appeared on any of the payrolls reported by Vancouver establishments. While the unemployment relief camps are designed to take care of such workers, it is probable that in some cases they still constitute a problem. The situation in Vancouver is aggravated by the milder winters enjoyed as compared with other parts of Canada. Manufacturing showed improvement throughout 1934, the index averaging 84.8 or 6.6 points higher than in the year before. In all but two months, the lumber trade showed heightened activity, and other manufactures were also generally brisker. The index for transportation was practically the same as in 1933, those for communications and construction were slightly lower, while services and trade were busier during most of the year, having higher average indexes.

### Employment by Manufacturing Industries

As already stated, employment in manufacturing generally increased uninterruptedly during 1934 from January 1 to October 1, the longest period of expansion yet experienced in the fourteen years for which data are now available. During these nine months of recovery, some 72,200 persons were reinstated on the staffs of the co-operating establish-

ments. Seasonal losses reduced employment during the last two months of the year, but on the whole, these were smaller than the average declines indicated in the preceding thirteen years, and the index, at 91.3 on December 1, was 11 points or 14.1 per cent higher than at the first of the year. This increase compared favourably with that of 13.4 per cent in the same months of 1933, while in each of the other years since 1930 activity had declined as the year progressed, there having been reductions of 3.6, 4.1 and 5.9 points between the indexes for January 1 and December 1 of 1932, 1931 and 1930, respectively. The average increase in the index during the twelve months, January 1 to December 1 in the years 1921-1933 is 7.4 per cent, so that the advance of 14.1 per cent during the year under review is especially noteworthy. The improvement which occurred in 1934 over 1933 was more pronounced than that noted in 1933 as compared with 1932. The payrolls reported at the beginning of December, 1934, exceeded those indicated for January 1 by some 58,000 persons, while in the preceding year some 50,000 workers had been reinstated in the co-operating establishments. Employment in each month of the year under review was more active than in the corresponding month of the preceding year; indeed, the indexes at the beginning of October, November and December were higher than in the final quarter of the last three years, while the average for the year was above that for 1933 and also for 1932.

Statistics were received during 1934 from some 5,218 manufacturers employing, on the average, 450,582 operatives, as compared with the average of 401,557 reported by the 4,980 establishments making returns in 1933. The index averaged 90.2 per cent of the 1926 payrolls of the co-operating firms, as compared with a mean of 80.9 in the preceding year, 84.4 in 1932, 95.3 in 1931, 109.0 in 1930 and 117.1 in 1929.

Index numbers are prepared for 45 different divisions and sub-divisions of factory employment; with few exceptions, these showed improvement during most months of 1934 as compared with the same period of the year before, the indexes averaging higher by several points; in many cases, the means were also higher than in 1932. In 43 manufacturing industries, employment on the whole was in greater volume than in 1933, while in only two was it not so active. These two were the fur and its products and the tobacco groups. The most noteworthy gains during 1934 occurred in lumber, rubber, textile, clay, glass and stone, electrical apparatus, iron and steel, non-ferrous metal and miscellaneous manufacturing plants. The mean index in iron

and steel advanced from 61.1 in 1933 to 71.5 in the year under review, or by 17 per cent; this improvement is of particular importance as indicative of an upward movement in the production of capital goods, the recovery from the low point of the depression having originated in the production of goods for immediate consumption. The highest level of employment, relatively to the 1926 basic average, was maintained in the edible animal, woollen, silk, hosiery and knitting, tobacco and beverage, chemical, electric current, non-ferrous metal and non-metallic mineral products. On the other hand, the indexes in lumber, musical instrument, clay, glass and stone and iron and steel factories were decidedly lower than the average for all manufacturing industries. Nevertheless, these four industries showed increases over 1933 that considerably exceeded the average.

### Logging

During 1933, there were evidences of a distinct revival in logging, a favourable movement that was intensified during the year under review, when employment, on the whole, reached a volume only exceeded in this record of fourteen years by that reported in 1929. The seasonal increases in the autumn and early winter of 1934 were on an unprecedented scale, forecasting activity during 1935 in river driving and in lumber and pulp mill operations. The annual index in logging showed an increase of 87.5 per cent as compared with 1933. This is a comparatively small group, constituting, on the average, less than four per cent of the aggregate number on the payrolls of the co-operating firms; in 1934, however, no less than 13 per cent of the total number of persons added to the staffs were reported by operators of lumber camps. All five economic areas shared in the improvement but the greatest activity was in the Eastern Provinces and Quebec. The working force of the 280 logging firms supplying information during 1934 averaged 34,549, and the index number, 124.7. The reported payrolls varied from 20,733 on June 1 to 55,384 at the end of the year. In 1933, the mean index was 66.5, while the number employed by the 231 employers co-operating was 18,278, and in 1932, the employees averaged 11,646, and the index, 42.6. Previous issues have mentioned that the difficulties of collecting data covering bush operations are constantly increased by the growing practice on the part of the larger operators, of letting contracts for their wood requirements to small contractors and to settlers on the northern frontiers of settlement. From many of such contractors, it is impossible to obtain data, at any rate in time for inclusion in the monthly surveys of employment.

90940—4

### Mining

There were gains in mining during seven months of 1933, while the trend was upward in nine months of last year. Employment throughout 1934 was consistently higher than in 1933 and 1932, and from June 1, activity was also greater than in the corresponding period of 1931. The index at 122.9 on December 1, 1934, was over fifteen per cent higher than at the opening of the year, and was also 16.5 per cent higher than on December 1, 1933. The index averaged 110.8, compared with 97.5 in 1933; this was an advance of 13.3 points, as compared with the reduction of 1.7 points in 1933 from the 1932 level. In *coal-mining*, employment was brisker, the index averaging 87.6, compared with 84.1 in 1933. The labour force of the 100 co-operating operators averaged 23,710 workers in 1934, as against a mean of 22,644 employed at some 90 mines in the preceding year. Employment in the mining of *metallic ores* was generally much higher than in 1933, being in fact in greater volume than in any other year on record; the mean index, at 179.4, was nearly 36 points above the average of the preceding year, and 33.8 points higher than in 1930, the previous maximum. The index varied from 158.5 on January 1 to 206.1 on December 1, showing uninterrupted improvement throughout the year. The staffs of the 103 reporting firms averaged 21,259 during the year under review, compared with 16,990 in 74 mines during 1933. The continued premium on gold had a decidedly stimulating effect on activity in the metallic ore division.

*Non-metallic minerals* (other than coal) showed considerably increased employment and extraordinary activity on road work; employment, being assisted by the partial recovery in the building trades, was better than in the same period of the preceding year. In spite of this improvement, however, production continued at a relatively low level as compared with most years of the record. The index averaged 83.5 as compared with 69.3 in 1933, but with 137.1 in 1929, when activity in this group was unusually pronounced, in consequence of the very large program of construction work then being executed. An average payroll of 5,674 persons was employed during 1934 by the 76 co-operating firms, while those reporting in 1933 had a mean of 4,585. Quarries, and other divisions coming under this heading recorded rather heightened activity over the preceding year.

### Transportation

The fluctuations in employment during 1934 differed from those of 1933; there were gains in only six months as compared with seven

months of the preceding year, but the expansion was on a larger scale, and the employment index for 1934 averaged 80.3, as compared with 79.0 in 1933. The 384 transportation companies whose returns were tabulated employed, on the average, 94,774 workers, as compared with the mean of 92,920 reported by the 370 employers co-operating in the preceding year. In the *steam railway division*, the index averaged 72.2 or 2.5 points more than in 1933. An average working force of 57,413 employees was recorded in steam railway operation, compared with 55,472 in 1933. *Street railways and cartage* companies, to the number of 192 with a mean of 24,270 workers, reported a rather lower level of employment, the index averaging 110.9 or two points lower than in the preceding year. Employment in *shipping and stevedoring* was also slightly less than in 1933; the mean index was 79.0, while the reported staffs averaged 13,089, varying between 9,822 persons on April 1, and 15,351 at the beginning of October. In the year before, the mean index was 79.9.

### Communications

The communications division reported a smaller volume of employment, the index averaging 79.1, compared with 83.9 in 1933. Telegraphs showed moderate improvement, but telephones were slacker. The personnel of the companies furnishing data during 1934 averaged 20,855 employees, of whom approximately 77 per cent were engaged on telephones. In the preceding year, the average was 22,062, some 80 per cent of these being engaged in telephonic communications. It is probable that a part of the falling-off in this group is due to the increasing use of the dial system of telephoning.

### Construction and Maintenance

The construction industries during 1933 had reported increases in six months; in the year under review, there were general advances during only five months, but the workers taken on in this shorter period of expansion were decidedly more numerous. The number of persons added to the payrolls of employers in these industries during 1934 constituted nearly one third of the total increase reported in all industries as compared with the preceding year, the average gains in highway and building work being disproportionately large in relation to the numbers employed therein. In some cases, the increases were due to works<sup>1</sup> undertaken by public authorities primarily for the relief of employment; the maintenance of work camps in place of direct relief for certain classes of unemployed men, was instituted

on a large scale during 1933, and continued during the year under review. There was also important improvement during 1934 in general building and railway construction. The forces of the 1,005 co-operating employers averaged 127,670 in the year being reviewed, varying between 102,681 on January 1 and 164,467 at the beginning of July. The general index for this group averaged 109.3, compared with 74.6 in 1933 and 86.0 in 1932.

*Building construction* gained in nine months in 1934, and was more active in each month than in the same period of the preceding year, when there had been increases in only five months. The index, at 55.2 on December 1, was almost 30 per cent higher than that of 42.5 recorded on December 1, 1933. The mean index in the year under review, 47.8 per cent of the 1926 average, compared favourably with that of 38.5 in the preceding year, but was still very much lower than in years of normal building activity. The average number of persons employed by the 640 reporting contractors was 19,218. In 1933, 635 contractors had reported an average of 14,404 employees. As already stated in connection with logging, there is an increasing tendency for the larger contractors to sublet their contracts, by trades, to sub-contractors, who usually employ a comparatively small number of workers. When they have less than 15 employees, they are not asked to furnish data on employment, so that the number employed in building is undoubtedly considerably in excess of that covered in these statistics.

*Road construction* as reported to the Dominion Bureau of Statistics afforded more employment in every month of 1934 than in the same period of 1933. The payrolls reported in the year under review averaged 81,362, ranging between 65,356 on January 1 and 114,392 at the beginning of July. The index averaged 221.3, compared with 132.2 in 1933. In many districts, road work normally is supplementary to the occupations usually followed by nearby residents, particularly agriculturists during slack period on their farms. The number engaged by the Dominion and Provincial governments on the Trans-Canada Highway and other unemployment relief projects and camps was very large during 1934, while many other unemployed men were given work of this nature by the municipalities and other authorities.

Employment in *railway construction* was generally more active than in 1933, improvement in this comparison being indicated in ten of the twelve months, while the working forces averaged 27,090, as compared with 24,487 in the preceding year. The reporting employers averaged 34, or two less than in 1933.

<sup>1</sup> See footnote on page 40.

The mean index was 67.9, while that in 1933 was 61.3. In 1928, when activity was at its maximum in this record of thirteen years, an average payroll of 46,148 persons was reported, and the mean index stood at 116.7.

### Services

Statements were received monthly from some 412 firms in this division, whose employees averaged 24,116. The situation showed improvement during eight months of the year under review, while employment in each month was in greater volume than at the same date of 1933. The index averaged 115.1, compared with 106.7 in the preceding year, and 113.6 in 1932. Employment in hotels and restaurants was generally brisker than in 1933, reflecting the generally improved situation in business, together with the better tourist trade resulting therefrom. In the miscellaneous group of services, composed largely of laundering and cleaning establishments, employment was also in rather greater volume than in the preceding year, the mean index, at 114.7, being just over four points higher.

### Trade

Trade was generally more active than in 1933; at the first of February, employment showed the usual pronounced contraction (in reaction from the intense activity of the Christmas and holiday season), and it also declined at the beginning of May and of August. Apart from these recessions, the trend was steadily upward throughout 1934. The payrolls of the 1,028 co-operating firms averaged 90,463 persons, and the index 117.9,

compared with 112.1 in 1933 and 116.1 in 1932. It has been mentioned in previous issues that many establishments, in order to keep on most of their usual staff, have reduced the working hours per week or per month, so that the earnings of the persons employed would, if available, show a greater falling-off than the personnel. Of the workers in the trade group, approximately 74 per cent were classified as employed in retail stores, in which activity was relatively greater than in wholesale houses. In recent years, there has been a growing tendency for the larger stores and chain organizations to absorb the small businesses in which would otherwise not be represented in these statistics, and this change in organization may have helped to keep the index of employment in trade at a relatively high level in recent years as compared with certain other groups.

### Tables Showing Employment by Industries

Tables of index numbers, by economic areas, leading cities and industries, by months and with yearly averages, are published in the bulletin entitled "Annual Review of the Employment Situation in Canada during 1934," issued by the Dominion Bureau of Statistics. This bulletin, which contains full particulars regarding employment in the various districts and industries together with numerous charts illustrating the course of employment in recent years, will be forwarded on application to the Dominion Statistician.

Monthly index numbers have been published in each issue of the LABOUR GAZETTE, those for December 1, appearing on pages 53 to 56 in this issue.

## EMPLOYMENT CONDITIONS IN CANADA AT THE END OF DECEMBER, 1934

### Reports of Superintendents of the Employment Service of Canada

THE employment situation at the end of December was reported by the Superintendents of the Employment Service to be as follows:—

Farmers in the Maritime Provinces were busy getting out firewood and attending to ordinary chores; otherwise, there was no activity in the group. In the logging districts many men came out of the camps for the holidays and were only just returning to work. Storms and bad weather, also scarcity of bait, had severely interfered with fishing operations. Coal mines in the New Glasgow area operated from two to five days per week, while those in Cape Breton and vicinity worked from three to five days. Manufacturing was slack following the Christmas sea-

son and some idleness was reported in the iron and steel group. Contracts already underway in building construction were progressing favourably, but no new prospects were being undertaken and relief work continued. Passenger and freight traffic, both by rail and water, was heavy, but auto and bus transportation had been at a standstill for several days due to severe storms. A fairly heavy demand existed for domestics and charworkers in the Women's Section.

Curtailement of orders in farming was general throughout the Province of Quebec. Logging was active. Manufacturing was reported in the different localities as follows: Montreal, tobacco and cigars, clothing and metal industries fairly busy, but rubber, boots

and shoes and textiles quiet; Quebec City, factories busy; Sherbrooke, Chicoutimi and Three Rivers, conditions good, although a reduction of staff for an indefinite period was noted at the paper mills in Three Rivers. Some activity was noted in the building industry and snow removal from streets and sidewalks provided work for a great number of men in the larger centres. Transportation by rail and water was better. Trade also showed improvement owing to the holiday season. Many placements of domestic workers were effected in the Women's Division, both in restaurants and in household service.

There were scarcely any calls for farm help in the Province of Ontario and for those received, wages were often very low. At North Bay the increased demand for loggers was well maintained, but elsewhere few additional men were sent out. The peak of employment in this industry appeared to be past in so far as the bush end was concerned, due to the policy amongst the larger companies of cutting requirements early. Little activity was shown in mining, except at Timmins. Few changes were recorded in manufacturing, scarcely any new hands were hired and a number of skilled workmen remained unemployed. Many factories were engaged in stocktaking and were operating for the time being with reduced staffs, although some plants continued to work steadily and the prospects, on the whole, appeared brighter for increased production in the New Year. Building construction was very quiet, with labouring jobs nearly all of a casual nature, but relief camps were in full swing and filled to capacity. Snow removal in the larger centres had also afforded employment for a number of men. The usual lull in regular placements of domestic workers during the Christmas season was evidenced in the Women's Division, with a corresponding increase in the demand for casual help. Out of town vacancies were difficult to fill and a shortage continued of experienced cooks-general.

Lessened activity was reported in farming in the Prairie Provinces, although a number of orders were listed under the Government Farm Relief Plan. An increased demand for bushworkers was noticeable, but no difficulty was experienced in finding available workers. Mines at Drumheller and Edmonton were particularly busy and were working full time. Elsewhere, operations were only fair. Manufacturing was quieter, with some employees laid off. Little building construction of any importance was in progress and nearly all outside work, including road grading and

relief camps, was discontinued during the extremely cold weather. Trade both wholesale and retail, had fallen off considerably following the holidays, although during the previous two months it had been much better than for several years; collections, however, were slow. There was a marked decline in requests for domestics in the Women's Division, the majority of unfilled orders being those listed under the Winter Farm Relief Scheme.

No activity was shown in farming in British Columbia, although some orchard work was being done. Many of the logging camps were closed over the holidays, but were expected to resume operations early in the New Year. Severe storms and a heavy fall of snow had hampered the work, and the destruction by fire of one of the larger sawmills had thrown a number of men out of employment. Mining was brisk, but there was no demand for help. Factories at Nelson were busy. Construction was quiet. Shipping and longshore work was fair only at New Westminster and Prince Rupert, but at Victoria, the shipyards and waterfront were busy. Trade was much improved over the holidays, store managers reporting the best Christmas business for some years past. In the Women's Domestic section quietness prevailed, although good cooks-general were always in demand.

---

The Ontario Hydro-Electric Power Commission has approved a plan whereby employees will be enabled to confer collectively with officials on wages and other working problems. Mr. T. Stewart Lyon, chairman, said that during the last few months employees, especially those in power stations, had sought some form of collective representation for discussing wages and matters affecting conditions of operation.

---

The report of the Minister of Public Works of Canada for the fiscal year ended March 31, 1934, indicates a total expenditure incurred by the department during that period on its various works of construction, maintenance and operation of \$11,146,600.64. Of this total, \$6,371,216.78 was expended on public buildings; \$2,408,303.05 on harbour and river works; \$1,172,582.56 on dredging; and the balance in smaller totals on roads and bridges, telegraphs, civil government, etc. As compared with the total for the fiscal year 1932-1933, the expenditure represents a decrease of \$2,994,420.93. The revenue for the year 1933-34, amounted to \$347,635.14—a decrease of \$30,871.86 as compared with the previous year.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN NOVEMBER, 1934

THE following information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on December 1 was 9,001, the employees on their payrolls numbering 925,225 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for October was 1,735, having an aggregate membership of 159,169 persons, 17.5 per

cent of whom were without employment on December 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 65 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

### (1) Employment Situation at the Beginning of December, 1934, as reported by Employers

Employment at the beginning of December suffered a seasonal recession as compared with the preceding month, but this was much smaller than the average contraction indicated between November 1 and December 1 in the experience of the years since 1920, so that the index, after correction for seasonal influences, showed an increase of nearly one point over November. This favourable movement is illustrated in the chart on page 52. Data were tabulated by the Dominion Bureau of Statistics from 9,001 employers, whose payrolls were reduced from 938,006 at the beginning of November, to 925,225 on December 1, 1934. The unadjusted index (1926=100) then stood at 98.9 compared with 100.2 on November 1, 1934, and 91.8 at the same date in 1933. In the preceding years since 1920, the December 1 index has been as follows: 1932, 83.2; 1931, 99.1; 1930, 108.5; 1929, 119.1; 1928, 116.7; 1927, 108.1; 1926, 102.3; 1925, 96.5; 1924, 91.9; 1923, 96.9; 1922, 96.3 and 1921, 88.3.

Manufacturing (notably of food, lumber and textile products), communications, transportation and construction showed seasonal curtailment at December 1, 1934. The losses in manufacturing and construction were less than the average declines indicated in those industries in the same period of the last thirteen years, but those in transportation were rather above the average. On the other hand, logging, mining and trade reported decided improvement; the gains in bush work exceeded the normal, seasonal advances noted in the

years since 1920, those in retail stores approximated the average, while the average change in mining from November 1 to December 1 in these years has been a decline. A fuller analysis of the situation in the various industrial groups appears below.

A brief review of general conditions at the end of the year shows that the index of 98.9 on December 1 was over 10 points or 11.6 per cent higher than at the opening of 1934. The average advance between January 1 and December 1 in the last thirteen years has been slightly more than seven per cent; the improvement effected during the year now drawing to a close has, therefore, considerably exceeded the normal. A noteworthy feature of the situation in 1934 has been the widespread nature of the recovery in employment, in which all industries except communications have shared. The gains in manufacturing (which employs approximately one-half of the total persons covered in these surveys), were especially important, also substantially exceeding the average advance indicated from January 1 to December 1 in the years since 1920.

An annual review of employment for the year 1934, in considerable detail, is given on pages 38 to 49 of the present issue.

### Employment by Economic Areas

Four of the five economic areas registered seasonally lowered activity on December 1, Quebec, Ontario, the Prairie Provinces and British Columbia showing contractions, while

firms in the Maritimes reported improvement. Activity in each of these divisions was greater than at the beginning of December of a year ago.

*Maritime Provinces.*—The trend of employment in the Maritime Provinces has, on the average, been downward on December 1 in the thirteen preceding years for which data are available; however, this generally unfavourable movement was reversed at the beginning of December of the present year, as it had been in 1933. The index at the latest date, standing at 106.9, reached its highest point since the beginning of 1932, being 14.5 per cent higher than at December 1, 1933.

ment having shown a falling-off at the beginning of December in twelve of the fourteen years for which data are available. The decrease occurring at the latest date reduced the index from 98.0 on November 1 to 96.4 on December 1, when it was over four p.c. higher than at December 1, 1933. Manufacturing, transportation and construction reported curtailment; within the first-named, the largest losses were in the textile, lumber, food, pulp and paper and clay, glass and stone divisions, while tobacco and beverage factories were decidedly busier. The reductions in manufacturing, and those in the other groups, were chiefly of a seasonal character. On the other

### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

**NOTE.**—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

Most of the increase on the date under review took place in trade, mining, logging and shipping, these industries being seasonally active. On the other hand, manufacturing, construction and steam railway operation reported reduced activity, also partly due to seasonal causes. Data were received from 635 firms employing 76,113 persons, as against 74,654 on November 1.

*Quebec.*—For the first time since Apr. 1, there was a decline in Quebec, according to statements from 2,146 employers of 264,235 persons, or 4,137 fewer than in the preceding month. The reduction was seasonal, employ-

ment having shown a falling-off at the beginning of December in twelve of the fourteen years for which data are available. The decrease occurring at the latest date reduced the index from 98.0 on November 1 to 96.4 on December 1, when it was over four p.c. higher than at December 1, 1933.

*Ontario.*—Employment in Ontario showed a further decline at the beginning of December, when manufacturing, transportation and construction afforded less employment than in the preceding month. On the other hand, services, mining, trade and logging reported expansion, that in bush work and retail stores were being substantial. Within the group of factory employment, there were large gains in the tobacco industry, but lumber mills, food, textile and some other plants were slacker. The firms

making returns for December 1, 1934, (3,973 in number) had 388,853 employees, compared with 395,163 at the beginning of November. The index, at 101.9 on December 1, 1934, compared favourably with that of 93.3 at the same date in 1933.

*Prairie Provinces.*—Declines were indicated in the Prairies Provinces on the date under review; the 1,327 reporting employers had let out 2,803 workers since November 1, thereby reducing their staffs to 118,711 on December 1. Retail trade, logging, manufacturing and coal-mining increased the numbers at work. On the other hand, wholesale trade, transportation and construction reported reduced employment, the losses in the last two groups being considerable. Employment at the beginning of December was at a higher level than on the same date in 1933, when the indicated decreases had been on a much larger scale.

*British Columbia.*—Further contractions occurred in British Columbia, in accordance with the movement almost invariably noted at the

beginning of December in this record of fourteen years. There were gains in mining, retail trade and highway construction, those in the last-named being partly due to unemployment relief works. On the other hand, manufacturing was decidedly slacker, chiefly in food factories, where the decline was seasonal in character. Logging, transportation and railway construction also released employees. An increase had been recorded on December 1, 1933, when the index was between seven and eight points lower. The 920 firms reporting for the date under review had 77,313 employees, as compared with 78,303 in their preceding statement.

Table I gives index numbers by economic areas.

### Employment by Cities

Of the eight centres for which separate tabulations are made, Windsor and the adjacent Border Cities and Winnipeg showed improvement as compared with November 1; firms in Vancouver reported no general change, while lessened activity was indicated in Mont-

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS

(AVERAGE CALENDAR YEAR 1926=100)

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia

Dec. 1.....	98.9	106.9	96.4	101.9	94.3	92.9
Relative Weight of Employment by Economic Areas as at Dec. 1, 1934.....	100.0	8.2	28.5	42.2	12.8	8.3

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated areas to the total number of all employees reported in Canada by the firms making returns for the date under review.

real, Quebec City, Ottawa, Toronto and Hamilton.

*Montreal.*—There was a decrease in the employment afforded by the 1,251 co-operating firms, whose staffs were reduced by 641 persons to 128,963 at the beginning of December. Manufacturing on the whole showed slightly lowered employment, mainly in textile plants, while tobacco and beverage factories were seasonally active; construction was also duller. On the other hand, retail trade and transportation reported improvement. The large gains in the former were seasonal, while those in the latter took place chiefly in steam railway operation. A much greater loss had been noted on the same date of last year, when the index of employment was over two points lower than that of 86.7 at the latest date.

*Quebec.*—Industrial activity in Quebec City declined, 543 workers being laid off by the 164 employers whose returns were received, and who had 12,109 employees on December 1. The largest contractions were in manufacturing, mainly in leather factories, but transportation

and construction were also slacker. A smaller recession had been indicated on the same date in 1933, and the index was then fractionally higher.

*Toronto.*—Decreases in personnel were recorded in Toronto by 1,313 firms who employed 117,459 persons, as compared with 117,660 at the beginning of November. Trade showed noteworthy improvement, and services, transportation and street and road construction and maintenance also reported greater activity. Manufacturing, however, was dull, the textile, chemical, iron and steel, electrical apparatus and food groups reporting reductions in their working forces. Increased activity had been registered on December 1 of last year, but the index of employment then was some five points lower than that of 97.1 at the latest date.

*Ottawa.*—There was a falling-off in Ottawa, where manufacturing reported considerable curtailment (mainly in lumber mills), and transportation was also quieter. One hundred and sixty-six employers recorded a combined payroll of 12,295 workers, as against 12,658 in

July 1.....	86.7	96.1	94.1	102.4	87.5	100.6	82.7	89.8
Aug. 1.....	86.4	99.4	92.9	103.4	87.8	100.7	84.0	91.5
Sept. 1.....	86.6	99.9	94.3	100.9	84.9	91.0	85.2	91.8
Oct. 1.....	87.0	97.5	96.5	100.3	84.4	86.7	86.5	90.5
Nov. 1.....	87.3	96.6	97.2	98.6	86.3	76.1	86.4	89.0
Dec. 1.....	86.7	92.4	97.1	96.0	86.1	77.9	87.1	89.0
Relative Weight of Employment by Cities as at Dec. 1, 1934.....	13.9	1.3	12.7	1.4	3.0	1.1	4.0	3.0

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated city to the total number of all employees reported in Canada by the firms making returns for the date under review.

their last report. Employment was in practically the same volume as at the beginning of December, 1933, when little general change had been indicated.

*Hamilton.*—A minor decrease occurred in Hamilton, where an aggregate working force of 27,488 persons was employed by the 266 firms furnishing data, who had 27,551 employees on their November 1 staffs. Manufacturing as a whole was rather slacker, due to curtailment in the textile group. In the non-manufacturing divisions, highway construction also showed curtailment, but trading establishments reported larger staffs. The index, at 86.1, was some six points higher than on the same date of a year ago, when an increase had been noted.

*Windsor and the adjacent Border Cities.*—There was an advance in the Border Cities, mainly in trade and construction. Statements were tabulated from 159 employers with 10,501

workers, compared with 10,269 in the preceding month. A gain had also been indicated on December 1, 1933, but the index of employment was then fractionally higher.

*Winnipeg.*—Employment improved in Winnipeg, according to data received from 438 firms employing 37,181 persons, as compared with 36,818 on November 1. Little general change took place in manufacturing; there was a decline in construction, while trade showed heightened activity of a seasonal character. The general index, at 87.1, was nearly four points higher than on the same date of last year, when a larger increase in employment had been noted.

*Vancouver.*—The situation in Vancouver was unchanged as compared with November 1, according to 389 employers of 28,203 workers, or practically the same as in the preceding month. Manufacturing, mainly of food and metal products, was rather slacker, but trade

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES

(AVERAGE CALENDAR YEAR 1926=100)

	All industries	Manufacturing	Logging	Mining	Communications	Transportation	Construction	Services	Trade
Dec. 1, 1921.....	88.3	85.8	110.5	102.5	89.2	98.7	69.4	78.0	95.5
Dec. 1, 1922.....	96.3	94.9	152.9	107.5	87.2	106.5	75.2	79.9	96.2
Dec. 1, 1923.....	96.9	95.5	148.4	110.8	91.1	105.1	76.7	88.7	96.0
Dec. 1, 1924.....	91.9	88.7	153.6	103.8	94.0	99.9	71.5	89.5	98.3

Oct. 1.....	100.0	94.4	113.4	117.9	81.3	84.8	117.0	116.2	120.0
Nov. 1.....	100.2	92.8	171.9	121.2	80.7	83.9	111.0	114.9	121.3
Dec. 1.....	98.9	91.3	198.6	122.9	79.8	80.1	100.3	115.2	126.0
Relative Weight of Employment by Industries as at Dec. 1, 1934.....	100.0	49.3	6.0	6.0	2.3	10.2	13.0	2.6	10.6

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada by the firms making returns for the date under review.

showed some improvement in preparation for the holiday season. A small reduction had been reported at the beginning of December, 1933, and the index then was about four points lower than that of 89.0 reported at the latest date.

Index numbers by cities are given in Table II.

### Employment by Manufacturing Industries

A seasonal decrease in employment occurred on December 1 in manufacturing establishments, 5,327 of which employed 457,179 operatives, compared with 464,949 on November 1. This decline of under two points was rather less than the average loss recorded in the thirteen preceding years for which data are available; after correction for the seasonal movement, therefore, the index showed a slight increase over that for November 1. Tobacco and beverage, rubber and iron and steel works reported heightened activity, the

gain in tobacco factories being considerable. On the other hand, there were reductions (in most cases of a seasonal character) in the food, leather, textile, lumber, pulp and paper, clay, glass and stone, chemical, electric current, non-ferrous metal and non-metallic mineral product industries. A much larger general decline had been indicated on December 1, 1933, and the index then was nearly seven points lower.

A significant feature of the present situation is that the index on December 1 was eleven points or 14.1 p.c. higher than at the beginning of 1934; this was an increase during the year that considerably exceeded the average advance indicated between January 1 and December 1 in the experience of the last thirteen years. During 1934, the general movement in manufactures was uninterruptedly favourable from the beginning of January until October 1, the longest period of steady im-

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY MANUFACTURING INDUSTRIES (AVERAGE 1926=100)

Industries	Relative Weight	Dec. 1 1934	Nov. 1 1934	Dec. 1 1933	Dec. 1 1932	Dec. 1 1931	Dec. 1 1930	Dec. 1 1929

Miscellaneous.....	.5	119.2	120.9	103.6	98.4	98.2	107.6	110.7

\*The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

provement noted in this record of fourteen years. While the trend has been seasonally downward in the last two months, the declines have been on smaller scale than usual. The gains over the year have been widely distributed among the various industries grouped under manufacturing, and all five economic areas have shared in the general improvement.

*Animal Products—Edible.*—There were further seasonal declines in fish-canneries, while meat-packing plants and dairies were rather busier. The result was a reduction of 612 in the staffs of the 260 firms making returns, who had 20,540 employees. This decrease involved a somewhat smaller number of persons than that recorded on the same date in 1933, when employment was at a lower level.

*Leather and Products.*—Employment in this industry showed a considerable loss at the beginning of December, occurring almost entirely in boot and shoe factories. Statements were tabulated from 265 manufacturers, employing 19,111 persons, as compared with 19,505 on November 1. Much greater reductions had been noted on December 1, 1933, and the index was then several points lower.

*Lumber and Products.*—Seasonal curtailment of operations on a larger scale than at the beginning of December, 1933, took place in this group; the losses were principally in rough and dressed lumber mills and occurred mainly in Quebec and Ontario. Data were received from 792 firms in this industry, whose staffs declined from 35,399 workers on November 1 to 33,767 on December 1. The index was considerably higher than on the same date a year ago.

*Plant Products—Edible.*—There was a seasonal reduction of 3,256 employees in the vegetable food factories whose returns were received; they reported a combined working force of 29,634 operatives. The curtailment indicated was chiefly in canneries, but sugar refineries were also slacker. The largest losses were in Ontario and British Columbia. The index of employment on December 1, 1934, was fractionally higher than at the beginning of December, 1933.

*Pulp and Paper.*—Statements were received from 581 manufacturers in the pulp and paper industry, whose payrolls were decreased by 358 persons to 57,272 at the beginning of December. Employment was brisker than on the same date in 1933, when a larger decline had occurred. Improvement took place in the production of paper goods and in printing and publishing establishments, while pulp and paper mills released employees. The largest reductions in personnel were in Quebec.

*Rubber Products.*—A moderate gain in activity was reported in the rubber group. The working forces of the 53 co-operating establishments stood at 11,765, compared with 11,699 on November 1. An increase had also been shown on the corresponding date in 1933, but the level of employment was then lower.

*Textile Products.*—There was a seasonal recession in employment in these industries; most of this occurred in the clothing trades, although cotton and headwear factories were also slacker. Returns were compiled from 926 manufacturers employing 91,084 workers, or 2,312 fewer than in the preceding month. There was a rather smaller loss at the beginning of December, 1933, but the index was then a few points lower.

*Tobacco, Distilled and Malt Liquors.*—Employment in tobacco factories greatly advanced, and there were also important increases in beverage works. An aggregate payroll of 16,670 persons was indicated by the 159 co-operating firms, compared with 14,371 at the beginning of November. Much smaller gains, on the whole, had been shown on the same date in 1933, when the index was between nine and ten points lower.

*Clay, Glass and Stone Products.*—Further seasonal reductions occurred in this industry, 535 persons being released by the 187 co-operating manufacturers, who had 7,524 on their payrolls. A downward tendency was also in evidence on December 1, 1933, when the volume of employment was smaller.

*Chemicals and Allied Products.*—A falling-off was indicated in the chemical group on December 1, according to data received from 175 firms having 9,453 employees, as compared with 9,627 in the preceding month. Although improvement had been noted at the beginning of December, 1933, the index then was lower than on the date under review.

*Electric Current.*—There was a decrease in employment in electric current plants, 97 of which had 14,102 employees, or 351 fewer than in the preceding month. The loss occurred mainly in the Maritime Provinces and Ontario. A larger reduction had been reported at the beginning of December, 1933, and the index number then was lower.

*Electrical Appliances.*—A minor decline was noted in electrical apparatus plants; 105 manufacturers employed 12,316 persons, as compared with 12,364 in their last report. Employment on December 1, 1933, was slacker than on the date under review, although the trend was then upward.

*Iron and Steel Products.*—Little general change took place in iron and steel factories,

increases in rolling mills, steel shipyards, foundries and other groups being offset by losses in the heating appliance, boiler, engine and tank and some other branches. There was a minor increase of 80 in the staffs of 820 co-operating manufacturers, who employed 94,058. The general level of activity in this group was decidedly higher than on the same date in the preceding year, when a similar gain had been indicated.

*Non-Ferrous Metal Products.*—A decline occurred in this division at the beginning of December, according to data received from 147 employers of 17,415 persons, as compared with 17,620 in the preceding month. The index was much higher than on December 1, 1933, when practically no general change had been registered.

*Non-Metallic Mineral Products.*—There was a further reduction in the manufacture of non-metallic mineral products; 123 firms employed 13,364 workers, or 195 fewer than at the beginning of November. Activity in this group was higher than on December 1, 1933; similar losses had then been noted.

### Logging

Continued advances were shown in logging, in which there were general increases. Statements were tabulated from 303 logging camps having 55,384 employees, or 7,681 more than in their last report. This gain involved a smaller number of persons than that registered on the same date in 1933, but the index then was many points lower.

### Mining

*Coal.*—Employment in coal mines increased at the beginning of December, 440 persons being added to the payrolls of the 101 co-operating operators, who had 25,828 employees. There were gains in the Maritime and Western Provinces. A large contraction had been shown on the corresponding date in 1933; the index number then was some seven points lower.

*Metallic Ores.*—There was a further increase in employment in metallic ore mines; 245 workers were taken on since November 1 by the 140 employers from whom information was received, and who had 24,418 persons on their pay lists. A minor gain had been indicated in December, 1933, when the number engaged by the firms reporting in this division was decidedly smaller.

*Non-Metallic Minerals other than Coal.*—An improvement in employment was noted in this industry, in which 78 firms furnished data showing that they employed 5,920 persons,

as compared with 5,820 on November 1. Conditions were better than in the same month of 1933, when a decline had occurred.

### Communications

Decreases in personnel were noted on telegraphs and telephones; 234 persons were released by the co-operating companies and branches. They had 21,128 employees on the date under review. The index was lower than in the early winter of 1933.

### Transportation

*Street Railways and Cartage.*—Employment in this division was seasonally quiet in all provinces. Data were compiled from 195 firms whose staffs declined from 24,729 on November 1 to 24,169 at the beginning of December. This loss was more pronounced than that recorded on the same date in 1932, and the index then was fractionally higher.

*Steam Railways.*—The trend of employment in railway operation was downward, 100 employers and branches reporting 56,457 workers, as compared with 59,710 in the preceding month. There were decreases in all provinces. The index number was slightly higher than on December 1, 1933, when smaller reductions had been indicated.

*Shipping and Stevedoring.*—Curtailment was registered in shipping; a decrease of 689 persons was reported by the 98 co-operating employers, whose staffs aggregated 14,182. A decrease had also been noted on December 1, 1933, but the index then was rather higher.

### Construction and Maintenance

*Building.*—Employment in building construction showed a seasonal falling-off from the preceding month. Statements were compiled from 675 contractors employing 22,310 persons, as compared with 24,482 on November 1. The most extensive curtailment was in Quebec and Ontario. Less pronounced shrinkage had been reported on December 1, 1933, but employment was then in smaller volume; this was partly due to the fact that greater unemployment relief works were under way in the month under review than in December of 1933.

*Highway.*—Important decreases were noted in the staffs of the 338 highway contractors furnishing statistics, who employed 73,480 workers on December 1, as compared with 79,070 in the preceding month. A large number of persons had been taken on at December 1, 1933, but the index was then slightly lower. Unemployment relief projects continue to absorb a considerable number of men.

*Railway.*—Activity on railway construction and maintenance showed another seasonal decline which involved more workers than that noted on the same date in 1933; the index was then fractionally higher than on December 1, 1934. Statistics were received from 35 contractors and divisional superintendents whose staffs were diminished from 26,584 men on November 1 to 21,784 on the date under review. The most pronounced contractions were in the Prairie Provinces, although there were large losses throughout the country.

### Services

Minor improvement was reported by the 430 co-operating service firms, who had 24,571 employees, 58 more than in the preceding month. Hotels and restaurants added to their labour forces, while laundries and dry cleaning plants were slacker. Employment was more active than on December 1, 1933, when a larger gain had been recorded.

## (2) Unemployment in Trade Unions at the Close of November, 1934

The term unemployment as used in the accompanying report has reference to involuntary idleness due to economic causes. Persons who are engaged at work outside their own trades or who are idle owing to illness are not considered as unemployed. Unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment was based, it should be understood that such figures have reference only to the organizations reporting.

Following nine month of uninterrupted advances in available work, unemployment among local trade unions at the close of November showed a slight rise from the previous month, the percentage of idleness standing at 17.5 as contrasted with 16.2 per cent in October. The percentage for the month reviewed was based on the returns compiled from 1,735 labour organizations, covering a membership of 159,169 persons, of whom 27,904 were without employment on the last day of the month. That the situation should be less favourable than in October was due primarily to seasonal influences. The changes in the various provinces from October, however, were not particularly outstanding, that of over 3 per cent in Quebec being the largest and attributable to losses in activity in the manufacturing industries, particularly the garment trades, and also in building and construction and transportation. From Manitoba and Sas-

### Trade

Important seasonal increases were again noted in retail trade, but wholesale houses released some employees. Returns were received from 1,096 trading establishments with 98,415 employees, or 3,763 more than on November 1. The index was higher than on the same date in the preceding year, when smaller advances had taken place.

### Tables

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area of industry, is of the total number of employees reported in Canada by the firms making returns on the date under review.

katchewan declines in employment of around 2 per cent were recorded, British Columbia, New Brunswick and Nova Scotia showing recessions on a smaller scale. The employment balance in Ontario and Alberta during November was favourable, though the changes from October were but nominal. In making a comparison with the returns for November, 1933, when 20.4 per cent of unemployment was reported in the country as a whole, Quebec unions alone indicated a moderate drop in activity during the month reviewed. The most pronounced improvement was reflected by Nova Scotia unions, the coal mines affording a much better volume of work than in November a year ago, though the majority of trades in this province indicated better conditions. In Ontario the employment expansion recorded was noteworthy and of a rather general character throughout the various trades and industries, Manitoba, Saskatchewan and Alberta also showing increases in activity of slightly lesser degree, and New Brunswick gains of minor importance. From British Columbia the same percentage of idleness was reported in both months under comparison.

The records of unemployment affecting trade union members in the largest city in each province except Prince Edward Island are tabulated separately each month. There was a general lowering of the employment volume available from October in all the cities used for comparison with the exception of Edmonton where a somewhat better situation obtained. Montreal with a drop in activity of

nearly 4½ per cent showed the most pronounced curtailment while Halifax was next in line with a decline of just under 4 per cent. Recessions of over 2 per cent occurred among Regina, Vancouver and Winnipeg unions and of over 1 per cent in Saint-John and Toronto. When contrasting with the returns for November, 1933, Halifax unions reported decided improvement during the month reviewed and among Edmonton, Winnipeg and Toronto unions the gains reflected were rather substantial. From Regina advancement on a more moderate scale was reported, Saint John unions showing an upward employment tendency though the change was very slight.

The manufacturing industries with 474 local unions reporting at the close of November a total of 50,301 members showed that 9,067 were without employment on the last day of the month, a percentage of 18.0 as contrasted with percentages of 16.7 in October and 20.5 in November, 1933. There was a pronounced falling off in activity during November from the previous month among garment, hat and cap, and wood workers, general labourers, and metal polishers, while iron, steel and leather workers and printing tradesmen showed but a nominally adverse tendency. Glass workers, on the contrary, were much better engaged than in October, as were also pulp

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

On the contrary, Vancouver and Montreal unions registered some falling off in the employment volume from November, 1933.

The chart which appears with this article shows the trend of unemployment by months from January, 1928, to date. Contrary to the steady downward trend pursued by the curve during the greater part of the year, the projection in November was upward from the previous month showing that unemployment was in slightly greater prevalence during the month reviewed. In this trend the curve paralleled its course of November, 1933, when there was also a slight rise in the level of the curve though unemployment as seen from the chart was in lesser volume than in the corresponding month a year ago.

and paper makers; and among textile and carpet workers, and cigarmakers improvement of lesser extent was noted. Activity for brewery workers and bakers and confectioners tended upward though the changes were fractional. Among fur workers the situation remained unchanged from October. When a comparison was made with the returns for November, 1933, in the manufacturing industries, extensive increases in employment were recorded by hat, cap, leather, fur and glass workers during the month surveyed, and conditions in the pulp and paper industry were notably improved. Brewery workers, cigarmakers and jewellery workers, whose combined membership is not large, also recorded fair-sized gains while the situation in the iron,

steel and printing trades was moderately better. Among bakers and confectioners and metal polishers there was a fractional rise in employment from November a year ago. The garment trades, however, were much slacker than in November, 1933, and extensive employment losses were noted by general

labourers and wood workers. In the textile and carpet trades slight declines in activity were recorded.

In the coal mining industry the same percentage of idleness was reported at the close of November as in the previous month, namely 5.4 per cent. This was manifest by the reports tabulated for November from 52 unions of coal miners, embracing a membership of 16,210 persons, 876 of whom were out of work on the last day of the month. There were fluctuations in the various provinces, however, Nova Scotia and British Columbia reporting a slight lessening of the employment volume accorded, and Alberta some improvement in conditions. A considerably higher level of activity was shown in coal mining, as a whole, from November a year ago when unemployment stood at 12.7. In this comparison the Nova Scotia mines indicated pronounced recovery from the employment losses of November, 1933, and in Alberta there was a slight gain in work afforded. Conditions in British Columbia, however, were somewhat quieter. In addition to the total idleness a number of mines were reported as being but partially employed during November.

The building and construction trades were slacker during November than in the previous month, the 201 unions making returns with a total of 15,904 members showing that 9,793 or a percentage of 61.6 were out of work at the close of the month contrasted with 55.1 per cent in October. The situation was, however, more favourable than in November, 1933, when 67.6 per cent of the members recorded were without employment. Bricklayers, masons and plasterers suffered extensive curtailment of activity during November, and among granite and stonecutters, and electrical workers recessions of lesser degree though pronounced, were recorded. Painters, decorators and paperhangers, carpenters and joiners, and steam shovelmen showed a moderate drop in work afforded from October. On the other hand, plumbers and steamfitters registered a gain during November of fairly substantial proportions, and improvement, on a smaller scale, was reflected by hod carriers and building labourers, bridge and structural iron workers, and tile layers, lathers and roofers. In contrast with the returns for November of last year hod carriers and building labourers indicated marked employment recovery during the month reviewed, and improvement on a substantial scale was noted by painters, decorators and paperhangers, carpenters and joiners, and steam shovelmen. Bricklayers,

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Average 1919.....	3.1	2.0	3.4	2.7	2.1	3.2	2.0	7.9	3.4

masons and plasterers, and granite and stone-cutters reported lesser gains in activity though noteworthy, and the situation for plumbers and steamfitters was moderately better. Among electrical workers, however, there was a large falling off in employment from November last year, and curtailment of much lesser magnitude was evident among bridge and structural iron workers, and tile layers, lathers and roofers.

Activity in the transportation industries during November eased off slightly from October, the 772 associations making returns with 53,607 members showing that 5,564 or a percentage of 10.4 were without work at the end of the month contrasted with 9.1 per cent in October. Conditions were, however, better than in November, 1933, unemployment for that month standing at 13.2 per cent. Navigation workers were considerably slackier than in October, and among steam railway employees, whose returns included over 78 per cent of the entire group membership reported, activity was slightly retarded. Among teamsters and chauffeurs, and street and electric railway employees there was but a nominal, adverse change from October. In making a comparison with the returns for November, 1933, in the transportation industries, the bulk of the expansion was reported by steam railway employees, conditions for navigation workers being much quieter than in November, 1933. The tendency for teamsters and chauffeurs was more favourable during the month under review, though the change was slight. Street and electric railway employees, however, reported the same percentage of idleness in both months compared.

Retail clerks were much better engaged during November than in the previous month, unemployment standing at 5.9 in comparison with a percentage of 11.0 in October. The November percentage was based on the reports received from 5 associations with a total of 1,769 members, 105 of whom were idle at the end of the month. In November a year ago, however, all members were reported at work.

According to the reports furnished by 74 associations of civic employees during November involving 7,433 members, 86 were reported as idle on the last day of the month, a percentage of 1.2 contrasted with percentages of 2.4 in October and 3.2 in November last year.

There was little change from the previous month, in the unemployment level in the miscellaneous group of trades during November, though the tendency was less favourable as shown by the reports tabulated from 112 labour organizations with a membership aggregate of 3,691 persons. Of these 567 or 15.4 per cent were without work at the end of the month contrasted with 15.2 per cent in October. Among theatre and stage employees there was a noteworthy drop in activity from October. On the other hand, stationary engineers and firemen, and unclassified workers reported advances in employment on a rather small scale, and hotel and restaurant employees, and barbers fractional gains only. Activity in the miscellaneous group of trades was in slightly greater volume than in November, 1933, when 16.8 per cent of the members were reported idle, stationary engineers and firemen, and unclassified workers accounting for this favourable movement. There was moderate curtailment evident among theatre and state employees from November a year ago, hotel and restaurant employees and barbers showing but nominal recessions.

Further and heavier contractions in employment than in the preceding month, were reflected by fishermen during November, the 2 unions making returns with 270 members reporting an unemployment percentage of 83.3 contrasted with 72.4 per cent in October. Distinctly unfavourable conditions were reflected from November, 1933, when 26.3 per cent of the members reported were idle.

Conditions for lumber workers and loggers during November, while slack, yet showed some improvement over the previous month, unemployment standing at 38.8 in contrast with 45.6 per cent in October. Reporting for November were 3 unions of these workers with 1,503 members, 583 of whom were idle at the end of the month. Activity was substantially curtailed from November, 1933, when unemployment stood at 20.3 per cent.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1933 inclusive and also the percentage of unemployment by provinces for November of each year from 1919 to 1931 inclusive and for each month from January, 1932, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

### (3) Employment Office Reports for November, 1934

The volume of business transacted during the month of November, 1934, in offices operated by the Employment Service of Canada was 0.4 per cent more extensive than in October, but nearly 17 per cent below that of November a year ago, the gain in the former instance being due to increased placements in construction and maintenance and farming, all other groups recording losses, the highest of which were in services and logging. In comparison with November, 1933, a very heavy decline was registered in construction and maintenance, followed by other losses of lesser magnitude in farming and

November, but declined slightly during the latter half of the month, and at the close of the period under review showed levels somewhat lower than those recorded at the end of November, 1933.

The ratio of vacancies to each 100 applications was 62.4 during the first half and 60.6 during the second half of November, 1934, in contrast with ratios of 58.4 and 62.5 during the corresponding periods of 1933. The ratios of placements to each 100 applications during the periods under review were 59.4 and 58.0 as compared with 55.8 and 59.9 in the corresponding month of 1933.

#### POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements ○-○-○-○-○-○

logging, the total of which much more than offset the gains shown in all remaining industries, the largest of these being in services.

The accompanying chart shows the trend of employment since January, 1932, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. It will be seen from the graph that the curves of vacancies and placements in relation to applications recorded a sharp upward trend during the first half of

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during November, 1934, was 1,378, as compared with 1,383 during the preceding month and with 1,659 in November a year ago.

The average number of applications for employment received daily by the offices during the month under review was 2,241, in comparison with 2,491 in October and with 2,747 during November, 1933.

The average number of placements made daily by the offices of the Service during November, 1934, was 1,315, of which 745 were

in regular employment and 570 in work of one week's duration or less, as compared with a total daily average of 1,310 during the preceding month. Placements in November a year ago averaged 1,589 daily, consisting of 674 placements in regular and 915 in casual employment.

During the month of November, 1934, the offices of the Service referred 36,202 persons to vacancies and effected a total of 34,189 placements. Of these, the placements in regular employment were 19,363, of which 15,041 were of men and 4,322 of women, while placements in casual work totalled 14,826. The number of vacancies reported by employers was 27,560 for men and 8,249 for women, a total of 35,809, while applications for work numbered 58,243, of which 44,478 were from men and 13,765 from women. Reports for October, 1934, showed 35,954 positions available, 64,745 applications made, and 34,052 placements effected, while in November, 1933, there were recorded 41,475 vacancies, 68,660 applications for work, and 39,709 placements in regular and casual employment.

The following table gives the placements effected by the offices of the Employment Service, each year, from January, 1924, to date:—

Year	Placements		
	Regular	Casual	Totals
1924.....	247,425	118,707	366,132
1925.....	306,804	106,021	412,825
1926.....	300,226	109,929	410,155
1927.....	302,723	112,046	414,769
1928.....	334,604	135,724	470,328
1929.....	260,747	137,620	398,367
1930.....	187,872	180,807	368,679
1931.....	175,632	295,876	471,508
1932.....	153,771	198,443	352,214
1933.....	170,576	181,521	352,097
1934 (11 months).....	208,951	166,627	375,578

#### NOVA SCOTIA

There was a decline of nearly 4 per cent in the number of positions offered through Employment Offices in Nova Scotia during November, 1934, when compared with the preceding month, but a gain of nearly 14 per cent in comparison with the corresponding month of 1933. Placements also were nearly 5 per cent less than in October, but nearly 14 per cent above the corresponding month of the previous year. Increased placements in construction and maintenance and logging accounted for the gain over November, 1933, as small changes only were reported in all other groups. There were 819 placements in construction and maintenance, and in services 350; of the latter, 252 were of household

workers. During the month 215 men and 106 women were placed in regular employment.

#### NEW BRUNSWICK

Orders received at Employment Offices in New Brunswick during November called for nearly 24 per cent less workers than in the preceding month and over 40 per cent less than during the corresponding month of 1933. There was a decline of over 21 per cent in placements, when compared with October and of over 39 per cent in comparison with November, 1933. Although there were fewer placements in all groups, except trade, than during November, 1933, the only declines of importance were in construction and maintenance and logging. Placements in construction and maintenance numbered 185, and in services, 516: of the latter, 384 were of household workers. Regular employment was found for 193 men and 59 women during the month.

#### QUEBEC

During the month of November, 1934, positions offered through Employment Offices in the Province of Quebec were nearly 29 per cent less than in the preceding month, but nearly 43 per cent above the corresponding month of 1933. Placements also were 32 per cent less than in October but nearly 46 per cent above November a year ago. All industrial divisions, except mining and transportation, in which nominal declines only were reported, participated in the gain in placements over November, 1933, the most noteworthy increases being in services, construction and maintenance and logging. Placements by industrial divisions included: manufacturing, 80; logging, 956; construction and maintenance, 658; trade, 126; and services, 2,101, of which 1,833 were of household workers. There were 1,926 men and 1,469 women placed in regular employment during the month.

#### ONTARIO

Opportunities for employment, as indicated by orders received at Employment Offices in Ontario during November, 1934, were nearly 7 per cent better than in the preceding month, but nearly 33 per cent less favourable than during the corresponding month of the previous year. Placements were over 10 per cent higher than in October, but over 32 per cent less than in November, 1933. The decline in placements from November a year ago was due to fewer workers being provided with relief employment, supplemented by small reductions in logging and trade. These losses were partly offset by gains in services, farming, transportation and mining. Indus-

trial divisions in which most of the placements were effected during the month were: manufacturing, 469; logging, 1,004; farming, 417; mining, 67; transportation, 244; construction and maintenance, 8,389; trade, 270; and services, 3,237, of which 1,819 were of household workers. During the month 3,202 men and 1,339 women were placed in regular employment.

#### MANITOBA

Employment Offices in Manitoba received orders for nearly 32 per cent more workers than in the preceding month and nearly 14 per cent more than during the corresponding month of the previous year. Placements were nearly 30 per cent higher than in October and nearly 3 per cent above November, 1933. Increased placements over November a year ago were reported in services, farming, trade and construction and maintenance. The only decline of importance under this comparison was in logging. Placements by industrial divisions included: logging, 236; farming, 2,116; construction and maintenance, 950; trade, 49; and services, 762, of which 682 were of household workers. Regular employment was found for 3,117 men and 504 women.

#### SASKATCHEWAN

The number of positions offered through Employment Offices in Saskatchewan during November, 1933, was nearly 8 per cent higher than in the preceding month, but nearly 31 per cent less than during the corresponding month of 1933. Placements were over 5 per cent more than in October, but over 30 per cent less than during November a year ago. There was a large decrease in farm placements when compared with November, 1933, and a somewhat smaller loss in construction and maintenance. Increases were reported in all other groups, except services, but none of these changes were important. Placements by industrial divisions included: manufacturing, 31; logging, 108; farming, 1,325; mining, 69; construction and maintenance, 427; and services, 673, of which 537 were of household workers. There were 1,625 men and 380 women placed in regular employment during the month.

#### ALBERTA

There was a decline of nearly 10 per cent in the number of positions offered through Employment Offices in Alberta during November, 1934, when compared with the preceding month, but a gain of nearly 33 per cent in comparison with the corresponding month of 1933. Placements were 10 per cent less than in October, but over 32 per cent

higher than in November a year ago. With the exception of small losses in mining and services, all industrial divisions showed gains in placements over November, 1933, those in construction and maintenance, farming and logging being the largest. Industrial divisions in which most of the placements were effected during the month were: logging, 112; farming, 477; mining, 55; construction and maintenance, 2,064; and services, 408, of which 327 were of household workers. During the month 2,493 men and 264 women were placed in regular employment.

#### BRITISH COLUMBIA

During the month of November, 1934, orders received at Employment Offices in British Columbia called for nearly 5 per cent more workers than in the preceding month and nearly 17 per cent more than during the corresponding month of 1934. Similar percentages of gains were reported in placements under both comparisons. A large increase in placements on highway construction was responsible for the gain over November, 1933, offset in part by declines in services and logging. Small changes only were reported in all other groups. Placements by industrial divisions included: manufacturing, 43; farming, 48; construction and maintenance, 3,448; and services, 564, of which 383 were of household workers. Regular placements numbered 2,270 of men and 201 of women.

#### Movement of Labour

During the month of November, 1934, the offices of the Employment Service of Canada made 19,363 placements in regular employment, 9,281 of which were of persons for whom the employment located was outside the immediate vicinity of the offices at which they were registered. Of the latter, 552 were granted the Employment Service reduced transportation rate, 448 going to centres within the same province as the despatching office and 104 to other provinces. The reduced transportation rate which is 2.7 cents per mile, with a minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

The labour movement in Quebec during November emanated from Hull and comprised the transfer of 73 bushmen to points outside the province. Of these, 66 went to situations in the Sudbury zone and 7 to Pembroke. Ontario offices issued 301 certificates for reduced transportation during November, all of which were for provincial centres. \*64 Placements effected by offices since closed.

employment within the districts covered by their respective offices Port Arthur transferred 199 bush workers, 33 mine workers, 4 carpenters, 1 lumber yard man and 3 restaurant workers, Sudbury 10 bushmen, 4 mine workers, and 1 blacksmith, and Fort William 6 bush workers, 4 carpenters, 1 mine cook and 1 barber. From Sudbury also, 1 mine carpenter was sent to North Bay and 4 miners to Port Arthur, the Fort William office in addition, despatching 2 miners to Timmins. Destined to the Windsor zone were 11 patternmakers, 4 journeying from Oshawa, 3 from Hamilton, 2 from Peterboro, and 1 each from Kitchener and Niagara Falls. The North Bay office effected transfers of 11 mine bricklayers to Timmins, and the Pembroke office of 2 highway construction workers to Port Arthur. The balance of this provincial movement was of mine workers, 3 in number, who were carried at the reduced rate from Timmins to Fort William. Persons benefiting by the Employment Service reduced transportation rate in Manitoba during November numbered 44, 13 of whom went to provincial situations and 31 outside the province. All of these were granted their certificates at the Winnipeg office. Within the province the transfers were for the Winnipeg zone and included 11 bushmen, 1 blacksmith, and 1 mine mechanic. Travelling to centres in other provinces 29 bushmen proceeded to employment within the Port Arthur zone, 1 farm hand to Yorkton and 1 butcher to Prince

Albert. Offices in Saskatchewan issued 20 certificates for reduced transportation during November, all of which were secured by bushmen going to employment within the province. For centres within their respective zones Yorkton transferred 10 of these, Prince Albert 5, and Regina 4. The Prince Albert zone also received 1 bushman from Saskatoon. Taking advantage of the Employment Service reduced transportation rate in Alberta during November, 107 workers travelled to provincial employment. These were shipped by the Edmonton office which was responsible for the despatch of 2 farm hands to Drumheller, and of 82 bush workers, 13 fishermen, 31 saw mill workers, 2 farm hands, 2 farm house-keepers, 1 miner, 1 clerk and 1 hotel worker to centres within its own zone. Transfers at the reduced rate in British Columbia during November numbered 7 and were effected by the Vancouver office. Destined to the Kamloops zone were 2 mine workers, to Penticton 1 farm hand, and to centres in the Vancouver zone 3 mine workers and 1 hotel clerk.

Of the 552 persons who journeyed at the Employment Service reduced transportation rate during November 242 were conveyed by the Canadian National Railways, 289 by the Canadian Pacific Railway, 14 by the Temiskaming and Northern Ontario Railway, 4 by the Pacific Great Eastern Railway, and 3 by the Northern Alberta Railway.

#### (4) Building Permits issued in Canada during November, 1934

The aggregate value of the construction represented by the building permits issued by 61 cities during November was \$2,601,418. This was a seasonal decline of \$120,501 or 4.4 per cent as compared with the October total of \$2,721,919, but an increase of \$977,280, or 60.2 per cent in the more significant comparison with the November, 1933, figure of \$1,624,138. The value of the building authorized during the first eleven months of 1934 amounted to \$24,326,224, an increase of \$4,533,020 over the total for the same period in 1933.

Some 50 cities furnished detailed statistics, showing that they had issued 250 permits for dwellings estimated to cost more than \$900,000, and about 1,500 permits for other buildings estimated at almost \$1,605,000. In addition, authority was granted for an engineering project valued at \$24,120. During October, authority was granted for the erection of about 350 dwellings and 2,300 other buildings, estimated to cost approximately \$630,000 and \$1,565,000, respectively.

Ontario and Saskatchewan reported increases of 13.0 per cent and 37.2 per cent, respectively, in the value of the building authorized as compared with October, 1934. Reductions were indicated in the remaining provinces, those of \$132,504, or 21.2 per cent in Quebec and \$122,060 or 83.3 per cent in Manitoba being largest.

As compared with November, 1933, Nova Scotia, New Brunswick, Quebec, Ontario, Saskatchewan, Alberta and British Columbia reported increases, of which the greatest was that of \$737,255 or 76.0 per cent in Ontario. There was a decline of \$26,635 or 52.1 per cent in this comparison in Manitoba.

Of the four largest centres, Toronto recorded an increase in the value of the building authorized in November as compared with the preceding month, and also with November of last year; in Montreal and Vancouver, the aggregate value was higher than in November, 1933, but lower than in October of this year, while in Winnipeg there was a reduction in

both comparisons. Of the other centres, Fredericton, Westmount, Galt, Guelph, Kingston, London, Owen Sound, Sault Ste. Marie, Windsor, East Windsor, Riverside, Woodstock, Regina, Kamloops and New Westminster reported greater building authorizations than in either comparison.

*Cumulative Record for First Eleven Months, 1920-1934.*—The following table shows the value of the building authorized by 61 cities during November and in the first eleven months of each year since 1920, as well as index numbers for the latter, based upon the total for 1926 as 100. The January-November index numbers of wholesale prices of building materials in these years are also given (average 1926—100).

The aggregate for the first eleven months of 1934 was higher by 22.9 per cent than in 1933, though it was lower than in other years since 1920; in this connection it should be noted that the average index numbers of wholesale prices

of building materials were also lower in 1934 than in any years from 1920 to 1930.

Year	Value of permits issued in November	Value of permits issued in first eleven months	Indexes of value of permits issued in first eleven months (1926=100)	Average indexes of wholesale prices of building materials in first eleven months (Average 1926=100)

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND UNITED STATES

### Great Britain

THE British *Ministry of Labour Gazette*, December, 1934, summarized the employment situation in November as follows:—

Employment at November 26, 1934, showed little change on the whole, as compared with a month earlier. It continued to improve, however, in the cotton, wool, hosiery, boot and shoe, and motor vehicle industries. There was a substantial reduction in the numbers temporarily stopped in the coal mining industry, and some improvement in employment was also shown in shipbuilding and ship-pairing, dock and harbour service and the distributive trades. On the other hand, there was a further reduction in employment in the building and allied industries, hat and cap manufacture, and the shipping and hotel and boarding-house services. Employment also declined in tailoring, dressmaking, the tin-plate and pottery industries, and cocoa, chocolate, etc., manufacture.

Employment showed an improvement in the Midlands and in the North of England, but there was a slight decline in the South, in Scotland and in Northern Ireland; while in Wales there was little change. In London and Southeast England, employment remained fairly good, and in the Southwest and Midlands it was fair. In the North of England,

in Scotland and in Northern Ireland it was still bad, and in Wales very bad.

Among those workpeople of ages 16-64 who were insured against unemployment in Great Britain and Northern Ireland the percentage unemployed at November 26, 1934 (including those temporarily stopped as well as those wholly unemployed), was 16.4, the same as at October 22, 1934, compared with 17.9 at November 20, 1933. The percentage wholly unemployed at November 26, 1934, was 13.9, as compared with 13.7 at October 22, 1934; while the percentage temporarily stopped was 2.5, as compared with 2.7. For males alone the percentage at November 26, 1934, was 18.8 and for females 10.0; ; at October 22 the corresponding percentages were 18.8 and 9.9.

At November 26, 1934, the number of persons on the registers of Unemployment Exchanges in Great Britain was 1,729,838 wholly unemployed, 309,643 temporarily stopped, and 81,304 normally in casual employment, making a total of 2,120,785. This was 1,150 more than a month before, but 159,232 less than a year before. The total included 1,704,139 men, 61,193 boys, 306,778 women, and 48,675 girls.

In Great Britain and Northern Ireland the total number of persons on the registers of Employment Exchanges at November 26, 1934, was 2,184,960.

### United States

*Manufacturing Industries.*—Seasonal declines in factory employment and pay rolls were reported in November. Employment decreased 1.9 per cent over the month interval and pay rolls decreased 2.5 per cent. The slightly greater decrease in pay rolls was due, to a slight extent, to the observance of the Armistice Day holiday during the November pay period. Thirty-seven of the 90 manufacturing industries surveyed reported gains in employment from October to November and 38 industries reported increased pay rolls.

The Bureau of Labor Statistics' index of factory employment for November 1934 is 76.8 (preliminary) and the November index of factory pay rolls is 59.5 (preliminary). The indexes of factory employment and pay rolls for October 1934 have been revised to include data supplied by a number of firms for which October information was not originally available and the revised indexes for October 1934 are 78.3 for employment and 61.0 for pay rolls. Employment in November 1934 stands at 0.8 per cent above the level of the November 1933 index (76.2) while pay rolls are 7.2 per cent above the level of the November 1933 index (55.5). The base used in computing these indexes is the average for the 3-year period, 1923-1925, which is taken as 100.

The indexes of factory employment and pay rolls are computed from returns supplied by representative establishments in 90 important manufacturing industries of the country. Reports were received in November from 25,507 establishments employing 3,554,573 workers whose weekly earnings were \$67,036,788 during the pay period ending nearest November 15. The employment reports received from these cooperating establishments cover more than 50 per cent of the total wage earners in all manufacturing industries of the country.

A comparison of the level of employment and pay rolls in November with the corresponding month of 1933 shows increased employment over the year interval in 52 industries and larger pay rolls in 64 of the 90 industries surveyed.

*Non-manufacturing industries.*—Five of the 18 non-manufacturing industries surveyed monthly by the United States Bureau of Labor Statistics reported gains in employment from October to November and 5 industries reported increase in pay rolls.

The changes in employment in November were largely of seasonal character. The increases of 3.8 per cent in anthracite mining

and 0.6 per cent in bituminous mining reflected increased production during the November pay period, while the increase of 1.5 per cent in retail trade was due largely to seasonal expansion in the general merchandising group of retail establishments. The subgroup of department, variety, general merchandise, and mail-order establishments reported an increase of 6.4 per cent in employment. Employment in the remaining 56,766 retail trade establishments for which data were available decreased 0.1 per cent over the month interval. The remaining two industries reporting increased employment from October to November were wholesale trade and banks, in which gains of 0.9 per cent and 0.1 per cent, respectively, were shown.

Declines in employment of 5.6 per cent in the dyeing and cleaning and 4.3 per cent in the quarrying and non-metallic mining industries reflect seasonal recessions.

According to reports supplied by 10,010 contractors employing 78,354 workers, employment in the private building construction industry declined 2.2 per cent. This decline is not as pronounced as those that have occurred in November during the past three years. These building construction figures do not include employees on construction projects financed from Public Works funds. Laundries reported a seasonal decrease in employment from October to November of 1.7 per cent. Brokerage firms reported a further decrease of 1.2 per cent in number of employees over the month interval.

The remaining decreases in employment ranged from 0.9 per cent in crude petroleum production to 0.3 per cent in the metalliferous mining and real estate.

In the Speech from the Throne at the opening of the Legislature of the Province of Quebec on January 8, it was stated that "the great problems of the hour chiefly consist in colonizing, sending back our people to the land and keeping the farmers' sons on the farm. The government will ask you to vote \$10,000,000 for such purposes and approve a vigorous colonization policy. The finances of the Workmen's Compensation Commission," the Speech continued, "had improved at the close of the year. It will therefore be possible to re-establish the indemnities which had been reduced and to extend from 16 to 18 years the age of the children of the injured workers who have a right to compensation. Unemployment, which has almost become a permanent institution, must be submitted to strict legislation in order to control it and enable municipalities to protect themselves against the invasion of unemployed workers from outside."

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

**T**HE Department of Labour is furnished from month to month with information regarding the contracts awarded by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government with respect to contracts "for construction, remodelling, repair or demolition of any work" is set forth in an Act of Parliament adopted on May 30, 1930, entitled "The Fair Wages and Eight-Hour Day Act" (chapter 20-21, Geo. V). The full text of this measure appeared in the *LABOUR GAZETTE*, April, 1930, page 383. The fair Wages and Eight-Hour Day Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repairs or demolition of any work shall be subject to the following conditions respecting wages and hours:—

(a) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(b) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or, except in cases of emergency, as may be approved by the Minister.

The Fair Wages Policy was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by Order in Council of April 9, 1924. The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wages rates for the different classes of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the Department concerned in the terms of contract.

In addition to the requirements of the Fair Wages and Eight-Hour Day Act, government contracts for the construction, remodelling, repair or demolition of any work, contain a number of other provisions for the protection of the workmen employed, which are sanctioned by the foregoing Orders in Council.

It is further provided in the foregoing Orders in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings; harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees; mail bags, letter boxes, and other postal stores; and any other articles and things hereinafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions, which are referred to in the Orders in Council as "B" conditions (the Conditions of the Fair Wages Orders in Council with reference to building and construction works being designated as "A" conditions), including the following Fair Wages Clause:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rate of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

Both in the case of contracts for building and construction work, and in the "B" conditions sanctioned by Orders in Council applicable to contracts for the manufacture of certain classes of supplies, the Minister of Labour is empowered to determine any ques-

tions which may arise as to wages rates and working hours.

The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and address of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed, claim therefore may be filed with the Minister of the Department with which the contract has been made and payment of such claim may be made by the latter.

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contracts for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially directed by the Fair Wages Orders in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of certain classes of supplies listed in the Fair Wages Orders in Council it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any disputes which may arise.

During the past month statements were received in the Department of Labour showing that the following contracts, containing fair wages conditions, have been recently executed by the Government of Canada:—

#### DEPARTMENT OF NATIONAL DEFENCE

##### *Contract in Group "A" (Construction, etc.)*

Supplying and applying insulation and built-up roofing on the Headquarters and Instructional Building, Royal Canadian Air Force Station, Trenton, Ontario. Name of contractor, Mr. R. P. White, Belleville, Ontario. Date of contract, November 7, 1934. Amount of contract, \$3,865. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rate of wages not less than	Hours of labour not more than
	per hour	per day
Man in charge of felt and gravel roofing.....	\$0.60	8
Sheet metal workers.....	0 65	8
Labourers.....	0 35	8

##### *Contracts in Group "B" (Manufacture of Supplies, etc.)*

The following is a statement of contracts awarded by the Department of National Defence during the month of December, 1934, for various classes of manufactured goods, which contracts included in all cases the "B" labour conditions above referred to:—

Goods contracted for	Contractor
Leather gloves.....	W. H. Gurney, Wingham, Ont.
Bedstead springs.....	Simmons Ltd., Vancouver, B.C.
Soap.....	London Soap Co., London, Ont.
Greatcoats.....	Workman Uniform Co., Montreal, P.Q.
Drill for trousers.....	Dominion Textile Co., Montreal, P.Q.
Fleece-lined drawers.....	Galt Knitting Co., Ltd., Galt, Ont.
Fleece-lined drawers.....	Penmans Ltd., Montreal, P.Q.
Fleece-lined drawers.....	Joseph Simpson Sons Ltd., Toronto, Ont.
Fleece-lined drawers.....	Zimmerknit Co., Ltd., Hamilton, Ont.
Socks.....	Royal Knitting Co., Ltd., Guelph, Ont.
Woollen shirts.....	C. Turnbull Co., Ltd., Galt, Ont.
Mackinaw coats.....	Grant-Holden-Graham, Ltd. Ottawa, Ont.
Fleece-lined shirts.....	Galt Knitting Co., Ltd., Galt, Ont.
Fleece-lined shirts.....	Penmans Ltd., Montreal, P.Q.

Goods contracted for	Contractor
Fleece-lined shirts.....	Joseph Simpson Sons Ltd., Toronto, Ont.
Fleece-lined shirts.....	Zimmerknit Co., Ltd., Hamil- ton, Ont.
Winter caps, peak.....	Ottawa Imperial Cap Co., Ottawa, Ont.
Drill for shirts.....	Dominion Textile Co., Mont- real, P.Q.
Steel sash.....	George W. Reed & Co., Ltd., Montreal, P.Q.
Cloth trousers.....	Yamaska Garments Ltd., St. Hyacinthe, P.Q.
Woolen drawers.....	Penmans Ltd., Montreal, P.Q.
Sweater jackets.....	Dominion Woollens & Worsteds, Ltd., Hespeler, Ont.
Gum rubber boots.....	Northern Rubber Co., Ltd., Guelph, Ont.
Cloth.....	Oxford Woollen Mills, Oxford, N.S.
Gum rubber boots.....	Woodstock Rubber Co., Wood- stock, Ont.

DEPARTMENT OF PUBLIC WORKS

Contracts in Group "A" (Construction, etc.)

Alterations, repairs, etc., to the Observatory, Toronto, Ontario. Name of contractor, Mr. Harry Jennings, Toronto, Ontario. Date of contract, November 28, 1934. Amount of contract, \$7,895. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day per week
Concrete mixer operator.....	\$0 60	8 44
Cement finishers.....	0 70	8 44
Stone masons.....	0 90	8 44
Stone cutters.....	0 87½	8 44
Bricklayers.....	0 90	8 44
Tile setters.....	1 07½	8 44
Structural steel workers.....	0 80	8 44
Ornamental iron workers.....	0 80	8 44
Carpenters and joiners.....	0 80	8 44
Motor truck drivers.....	0 50	8 44
Sheet metal workers.....	0 75	8 44
Man in charge of felt and gravel roofing.....	0 70	8 44
Lathers (metal—when nailed on wood furring).....	0 62½	8 44
Lathers (metal—when tied on metal furring).....	1 00	8 44
Plasterers.....	1 00	8 44
Plasterers' helpers.....	0 65	8 44
Painters and glaziers.....	0 75	8 44
Plumbers and steamfitters.....	0 85	8 44
Electricians.....	1 00	8 44
Labourers.....	0 50	8 44
Driver, team and wagon.....	1 00	8 44
Drivers.....	0 50	8 44

Construction of an extension to the wharf at Riviere a la Martre, Gaspé County, P.Q. Name of contractor, Mr. William Harvey, Grand River, P.Q. Date of contract, December 21, 1934. Amount of contract, approximately \$19,662. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Machinist.....	\$0 55	8
Blacksmith.....	0 45	8
Carpenters and joiners.....	0 50	8
Timbermen or cribmen (using such tools as broad-ax, hammer, X-cut saw, adze, auger).....	0 37½	8
Driver, horse and cart.....	0 45	8
Driver, team and wagon.....	0 55	8
Drivers.....	0 30	8
Motor truck drivers.....	0 35	8
Drill runners—machine.....	0 40	8
Boatmen.....	0 30	8
Firemen.....	0 35	8
Hoist operator—gasoline.....	0 45	8
Compressor operator.....	0 40	8
Diver.....	1 00	8
Labourers.....	0 30	8

Construction of a public building at Norwood Grove, Manitoba. Name of contractors, Claydon Co., Ltd., Winnipeg, Manitoba. Date of contract, December 18, 1934. Amount of contract, \$17,823 and unit prices for additional work. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Concrete mixer operators.....	\$0 50	48
Cement finishers.....	0 60	48
Stone masons.....	1 00	44
Stone cutters (granite, sandstone and limestone).....	0 90	44
Brick and hollow tile layers.....	1 00	44
Brick and hollow tile layers' helpers.....	0 47½	48
Structural steel workers.....	0 75	44
Ornamental iron workers.....	0 75	44
Carpenters and joiners.....	0 75	44
Sheet metal workers.....	0 70	44
Roofers, felt and gravel (man in charge).....	0 60	48
Lathers, metal.....	0 75	44
Plasterers.....	1 00	44
Plasterers' helpers.....	0 47½	48
Painters and glaziers.....	0 70	44
Plumbers.....	0 90	44
Plumbers' helpers.....	0 47½	48
Steamfitters.....	0 90	44
Steamfitters' helpers.....	0 47½	48
Electricians.....	0 85	44
Electricians' helpers.....	0 47½	48
Labourers—skilled.....	0 42½	48
“ —unskilled.....	0 37½	48
Teamster, team and wagon.....	0 65	48
Motor truck driver.....	0 40	48

Construction of an extension to the wharf at Baie St. Paul, Charlevoix County, P.Q. Name of contractor, Mr. George Villeneuve, Pointe au Pic, P.Q. Date of contract, December 13, 1934. Amount of contract, approximately \$24,522.70. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Blacksmith.....	\$0 45	8
Carpenters and joiners.....	0 50	8
Compressor operators.....	0 40	8
Drill runners—machine.....	0 40	8
Driver, team and wagon.....	0 55	8
Driver, horse and cart.....	0 45	8
Driver.....	0 30	8
Motor truck driver.....	0 35	8
Labourers.....	0 30	8
Powdermen.....	0 40	8
Hoist operators—gas.....	0 45	8
Hoist operators—steam.....	0 55	8
Timbermen or cribmen (using such tools as: broad-ax, X-cut saw, auger, adze, hammer).....	0 37½	8

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Blacksmith.....	\$0 72½	8
Blacksmiths' helpers.....	0 50	8
Carpenters and joiners.....	0 65	8
Cement finishers.....	0 60	8
Cement mixers.....	0 40	8
Cement operator (gasoline mixer).....	0 50	8
Cement worker.....	0 40	8
Labourers, common.....	0 40	8
Labourers' foreman.....	0 50	8
Painters and glaziers.....	0 62½	8
Powdermen.....	0 50	8
Teamsters, with team and wagon.....	0 95	8
Tool sharpeners.....	0 75	8
Truck drivers.....	0 50	8

Underbrushing and cutting of trees on Saanich Mountain, Victoria B.C. Name of contractors, Coast Contracting and Fencing Co., Ltd., Victoria, B.C. Date of contract, November 7, 1934. Amount of contract, \$3,500. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Riggers.....	\$0 62	8
Labourers, common.....	0 40	8
Labourers' foreman.....	0 50	8
Truck drivers.....	0 45	8
Truck drivers with 1 ton truck.....	1 00	8
“ “ “ 2 “ “.....	1 50	8

Teamster.....	0 40	8
Motor truck driver.....	0 45	8

N.B. In any cases where, by agreement or current practice, the working hours of any class of workers are less than 48 per week, such lesser hours shall not be exceeded on this contract.

Repairing and resurfacing the road at the Astrophysical Observatory, Saanich Mountain, Victoria, B.C. Name of contractor, Mr. Alexander Lockley, Esquimalt, B.C. Date of contract, November 21, 1934. Amount of contract, \$6,850. A fair wages schedule was inserted in the contract as follows:—

*Contract in Group "B" (Interior Fittings, etc.)*

Construction and installation of new interior fittings in the public building, Truro, N.S. Name of contractor, Mr. James N. Kenney, Truro, N.S. Date of contract, November 26, 1934. Amount of contract, \$1,768. The "B" labour conditions were inserted in this contract.

## POST OFFICE DEPARTMENT

Following is a statement of payments made in December, 1934, for supplies ordered by the Post Office Department under contracts which were subject to regulations for the suppression of the sweating system, the securing of payment to the workers of fair wages, and the performance of the work under proper sanitary conditions:—

Nature of orders	Amount
	\$ cts.
<i>Making metal dating stamps and type, brass crown seats, cancellers, etc.</i>	
Pritchard-Andrews Co. of Ottawa, Ltd., Ottawa, Ont.....	324 57
<i>Making and repairing rubber stamps, daters, etc.</i>	
Pritchard-Andrews Co. of Ottawa, Ltd.....	320 79
<i>Making and supplying letter carriers' uniforms</i>	
Workman Uniform Co., Ltd., Montreal, P.Q..	480 73
Tower Canadian Ltd., Toronto, Ont.....	153 66
<i>Mail bag fittings—</i>	
F. W. Carling, Ottawa, Ont.....	3,457 72
G. W. Sadler Belting Co., Ltd., Montreal, P.Q.....	249 01
Chas. A. Duff, Montreal, P.Q.....	1,590 00
<i>Stamping machines, etc.—</i>	
Machine Works Ltd., Montreal, P.Q.....	13,120 99
<i>Satchels—</i>	
Hugh Carson Co., Ltd., Ottawa, Ont.....	1,527 00
<i>Scales—</i>	
Pritchard-Andrews Co., Ltd., Ottawa, Ont...	1,263 82
<i>Stamping Ink—</i>	
J. E. Poole Co., Toronto, Ont.....	388 95

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In each agreement, the rates of wages for the principal classes of labour are given, with other information of general interest.

## Manufacturing: Wood Products

STRATFORD, ONTARIO.—A CERTAIN FURNITURE MANUFACTURER AND A COMMITTEE OF EMPLOYEES.

Following a dispute with one firm which was reported in the LABOUR GAZETTE, December, 1934, page 1091, the agreement between certain furniture manufacturers and their employees, which was summarized in the LABOUR GAZETTE, November, 1933, page 1124, was renewed for that firm for one year without change.

The same piece rates as formerly in effect are to continue and the hours also continue at 44 per week.

## Manufacturing: Textiles and Clothing

MONTREAL, QUEBEC.—CERTAIN CAP MANUFACTURERS AND THE HATTERS, CAP AND MILLINERY WORKERS INTERNATIONAL UNION, LOCAL No. 49.

Agreement reached with several firms following the dispute reported in the LABOUR GAZETTE,

November, 1934, page 998. Agreement to be in effect from October 1934.

Only union members to be employed. Union representative to have access to the shop.

Hours: 44 per week.

Overtime: time and one-half.

Wage rates vary in different establishments, but are reported to be between 10 and 15 per cent higher than those previously in effect.

Equal division of work among employees at all times during slack as well as busy season, such division to be arranged between the shop chairman and the manufacturer or his nominee.

No strike or lockout to occur while the agreement is in effect.

## Service: Recreational

CALGARY, LETHBRIDGE AND DRUMHELLER, ALBERTA. CERTAIN THEATRES AND THE INTERNATIONAL ALLIANCE OF THEATRICAL STAGE EMPLOYEES AND MOTION PICTURE MACHINE OPERATORS, LOCAL No. 302.

Agreements to be in effect from September, 1933, and later dates to September 1, 1935.

Only union members to be employed.

Overtime to be paid *pro rata*, Sunday work at double time, midnight shows at time and one half.

The total amount of wages paid projectionists per week in each theatre is stated and not the amount to each operator in most cases. In each of three large theatres in Calgary, total wages paid projectionists are \$160, in another \$150 and in another \$120 (apparently four projectionists in each theatre). In two other theatres in Calgary wage rates are \$25 for each operator for a 36 hour week. In Lethbridge, total wages per week at one theatre \$80 and at another \$66 (apparently two projectionists in each case). At one theatre in Drumheller total wages of \$60 per week (apparently two operators).

## PRICES, RETAIL AND WHOLESALE, IN CANADA, DECEMBER, 1934

### Cost of Living, Prices of Staple Articles and Index Numbers

The movement in prices during the month was slight, both the cost per week of the family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being practically unchanged from the November level.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was \$7.54 at the beginning of December as compared with \$7.58 for November; \$7.37 for December, 1933; \$11.83 for December, 1929; \$11.18 for December, 1926; \$11.00 for December, 1921; \$16.92 for June, 1920 (the post war peak); and \$7.96 for December, 1914. The most important declines occurred in the prices of beef, pork and potatoes, while the prices of eggs, butter and bread showed the most important advances. Including the cost of fuel and rent with that of foods the total budget averaged \$16.02 at the beginning of December as compared with \$16.03 for November; \$15.83 for December, 1933; \$22.11 for December, 1929; \$21.40 for December, 1926; \$21.49 for December, 1921; \$26.92 for July, 1920 (the post war peak); and \$14.28 for December, 1914. Fuel was slightly higher owing to increases in the prices of coal and wood. Rent was unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1926 as 100 was unchanged in December from the level of November at 71.2. Comparative figures for previous dates are 69.1 for December, 1933; 96 for December, 1929; 97.9 for December, 1926; 96.4 for December, 1921; 164.3 for May, 1920 (the post war peak); and 66.4 for December, 1914. Ninety-seven prices quotations were higher, 69 were lower and 401 were unchanged.

In the grouping according to chief component materials six of the eight main groups were higher, but advances in these were offset by declines in the other two. The groups which advanced were; the Vegetables and Vegetable Products group, because of higher prices for barley, corn, flax, rye, bran and shorts; the Fibres, Textiles and Textile Products group, because of higher prices for raw cotton and raw silk; the Iron and its Products group, mainly because of higher prices for tin plate; the Non-Ferrous Metals and their Products group, because of gains in the prices of antimony, copper and zinc; The Non-Metallic Minerals and their Products group, because of higher prices for coal and sulphur; and the Chemicals and Allied Products group. The Animals and their Products group and the Wood, Wood

Products and Paper group declined, the former because of reduced quotations for cured meats, fish and eggs, and the latter because of lower prices for lumber.

In the grouping according to purpose consumers' goods were fractionally lower, mainly because of lower prices for certain foods, chiefly fish, fruits, vegetables and eggs. Producers' goods showed some advance, because of higher prices for materials for metal-working industry, for the chemical using industry, for the meat packing industry and for the milling industry.

### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of December of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located but still fairly central, without modern conveniences.

The figures as to rentals are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amounts due.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which statistics were available when first published in the LABOUR GAZETTE in January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only

(Continued on page 84)

**COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL, AND LIGHTING, AND RENT IN  
TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA**

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family

\*Prior to 1926 number of commodities was 236, and commencing in January, 1934, the number is 567.

(Continued from page 76)

fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

### Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living, based on prices in 1913 as 100, shows the percentage

changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the food group in the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number for rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and costs of the various items from 1913 to 1926, weighted according to the importance of each item in workingmen's family expenditure, and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

### Retail Prices

Beef prices were again lower in most localities, sirloin steak averaging 19.3 cents per pound as compared with 20.3 cents in November, rib roast 14.7 cents as compared with 15.4 cents and shoulder roast 10.3 cents per pound as compared with 10.7 cents. Fresh pork declined from an average price of 20 cents per pound in November to 19.1 cents in December, and bacon from 34.5 cents per pound to 32.7 cents.

The price of fresh eggs was up from an average price of 40.4 cents per dozen in November to 41.4 cents in December. Lower prices were the rule in Ontario and British Columbia but other localities averaged considerably higher. Butter prices were higher in most localities, dairy averaging 22.1 cents per pound as compared with 21.6 cents, and creamery averaging 25.1 cents as compared with 24.4 cents the previous month.

### CHANGES IN THE COST OF LIVING IN CANADA FROM 1913 TO 1934\*

\*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18½%; Clothing 18½%; Sundries, 20%.

The price of bread was fractionally higher at an average price of 6 cents per pound. Potatoes were slightly lower, averaging 72 cents per ninety pounds as compared with 76 cents in November and \$1.09 in January. Anthracite coal averaged slightly higher at \$15.17 per ton. Hardwood, in stove lengths, was up from \$11.62 per cord to \$11.71. No changes were reported in rent.

Following are the prices reported for Welsh coal, domestic sizes: Halifax, \$16; Windsor, Nova Scotia, \$16.50; Moncton, \$16; Saint John, \$14; Quebec, \$14.50; Three Rivers, \$15; Sherbrooke, \$16.25; St. Hyacinthe, \$15.50; Montreal, \$15.50; Ottawa, \$16.75; Kingston, \$16; Belleville, \$16.50; Peterborough, \$16.50; Oshawa, \$14.75; Toronto, \$15; St. Catharines, \$15.50; Hamilton, \$15; Brantford, \$16.75; Galt, \$16.50; Windsor, \$14; Sudbury, \$17.50; Cobalt, \$19; Timmins, \$19; Port Arthur, \$16; Fort William, \$16; Winnipeg, \$19.50.

### Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices showed relatively little change during the month. The price of No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, fluctuated between 78 cents per bushel and 80 cents, the average being 79.2 cents as compared with 79.6 cents in November. Rye was up from 55.9 cents per bushel in November to 58.9 cents in December, barley from 51.9 cents per bushel to 54.9 cents and flax from \$1.34 per bushel to \$1.40. Flour at Montreal was 10 cents per barrel lower at \$5.40, while rolled oats at Toronto advanced from \$3 per ninety pound bag to \$3.15. Raw sugar at Montreal was unchanged at \$4.90 per hundred pounds. Raw Ceylon rubber at New York was fractionally higher at 12.8 cents per pound. The price in December, 1933, averaged 8.8 cents per pound. In livestock prices, good steers at Toronto advanced from \$4.78 per hundred pounds to \$5.38 and at Winnipeg from \$3.45 per hundred pounds to \$3.80. Calves at Toronto were up from \$6.62 per hundred pounds to \$7.12 and at Winnipeg from \$4.76 per hundred pounds to \$5.72. Bacon hogs at Toronto advanced from \$7.89 per hundred pounds to \$8.12 and lambs from \$6.73 per hundred pounds to \$7.26. Fresh eggs were substantially lower, the price at Montreal averaging 38.9 cents per dozen as compared with 44 cents the previous month. At Toronto the price was 35.3 cents per dozen as compared with 41.4 cents in November. A factor in this decline was the accumulation at several points of unusually large supplies. Creamery butter at Montreal advanced from 22.2 cents per pound to 22.6

cents and at Toronto from 22·7 cents per pound to 23·7 cents. The price of raw cotton at New York advanced from 12·2 cents per pound to 12·6 cents. The price of raw wool declined from 15 cents per pound to 13·14 cents. Sawn spruce lumber was \$1 per

thousand board feet lower at \$15·50, while common fir was down from \$17 per thousand board feet to \$16. Electrolytic copper at Montreal advanced from \$7·26 per hundred pounds to \$7·43, while tin was slightly lower at an average price of 55·3 cents per pound.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

**T**HE following notes afford information as to recent changes in prices in Great Britain and certain other countries. The index numbers of the cost of living are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. Tables giving the official and certain other index numbers of cost of living, retail and wholesale prices in Great Britain and several of the principal commercial and industrial countries is included in "Prices in Canada and Other Countries, 1934," which is a Supplement to this issue of the LABOUR GAZETTE.

### Great Britain

**WHOLESALE PRICES.**—The Board of Trade index number, on the base 1924=100, was 62·7 for November, showing no change from the previous month. Foods on the whole decreased 0·1 per cent due to a small decrease in cereals, while meat and fish were unchanged and other food advanced. Non-foods were 0·1 per cent higher on the average, due to a small advance in textiles other than cotton.

The *Statist* index number, on the base 1867-1877=100, was 81·0 at the end of November, a decrease of 0·1 per cent for the month. All groups showed some decreases with the exception of the textile group, which advanced 5·9 per cent due to higher prices for cotton, flax, jute, wool and silk.

**COST OF LIVING.**—The index number of the Ministry of Labour, on the base July, 1914=100, was 144 at December 1, showing no change from the previous month either in the total or in any of the groups.

### France

**WHOLESALE PRICES.**—The index number of the General Statistical Office, on the base 1913=100, was 71 for November, a decrease of one point for the month. Decreases were noted in both national and imported products and in all groups except textiles which advanced slightly.

### Germany

**WHOLESALE PRICES.**—The index number of the Federal Statistical Office, on the base 1913=100, was 101·2 for November, an ad-

vance of 0·2 per cent for the month due to slightly higher prices for agricultural products, colonial products and manufactured goods. Raw materials and semi-manufactured goods were slightly lower, the principal decreases occurring in rubber and in non-ferrous metals.

**COST OF LIVING.**—The official index number on the base 1913-1914=100, was 122·3 for November, an advance of 0·2 per cent for the month. Small increases were noted in all groups except rent which showed a fractional decrease.

### United States

*Bradstreet's* index number (continued by Dun and Bradstreet, Incorporated), which is the sum total of the prices per pound of 96 commodities of common consumption was \$9·2913 at December 1, an increase of 0·1 per cent, which rise was fairly well distributed throughout the thirteen groups, of which only three, fruits, textiles and miscellaneous commodities were lower than in the previous month.

*Dun's* index number (continued by Dun and Bradstreet, Incorporated), which is based on the cost *per capita* of a year's supply of commodities was \$170·199 at December 1, an advance of 1·3 per cent over the previous month, reaching the highest point since September 1, 1930. Declines in metals and miscellaneous commodities were more than offset by advances in all other groups.

**COST OF LIVING.**—The index number of the Department of Labour and Industries, Massachusetts, of the cost of living in Massachusetts, on the base 1913=100, was 134·7 for November, a decrease of 0·2 per cent for the month. Food prices declined one per cent, while clothing was slightly higher than for October.

The Medical Practitioners' Union was affiliated with the Trades Union Congress of Great Britain on December 19. It has a membership of nearly 5,000 doctors, many of whom are engaged in the public health and municipal services. The National Union of County officers also was accepted as an affiliate of the T. U. C.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Dominion Law Governs Non-payment of Wages Earned by Workers

The question of the validity of section 113 of the Companies Act, which provides for the liability of directors for unpaid wages, was considered by the Manitoba Court of Appeal when the claim was advanced that such liability involved "property and civil rights", and was therefore reserved for provincial jurisdiction. The Court ruled that the section was within the legislative competence of Parliament. The circumstances of the case are set forth in the judgment of Mr. Justice Robson, which follows:—

"This is an appeal by defendants from a judgment of Bernier, Co. Ct. J. The plaintiff sued in the County Court of Winnipeg alleging that on February 1, 1932, she was employed by the Mercantile Collectors Ltd., a company incorporated under the Companies Act of Canada, as a stenographer at \$85 per month; that the defendants were directors of the company during 1932; that in that employment plaintiff worked for the said company from February 1, 1932, until December 31, 1932, being 11 months; that there is a balance of salary due plaintiff of \$420.50; that the plaintiff sued the company in the said County Court and on May 4, 1933, recovered judgment for \$420.50 wages and \$105.85 costs; that on May 12, 1933, a writ of execution was issued and on May 18, 1933, it was returned unsatisfied.

"The plaintiff founds her action on section 113 of the Companies Act (Revised Statutes of Canada 1927, chapter 27). That section reads as follows:—

113. The directors of the company shall be jointly and severally liable to the clerks, labourers, servants and apprentices thereof, for all debts not exceeding six months' wages due for service performed for the company whilst they are such directors respectively; but no director shall be liable to an action therefor, unless the company is sued therefor within one year after the debt becomes due, nor unless such director is sued therefor within one year from the time when he ceased to be such director, nor unless an execution against the company in respect of such debt is returned unsatisfied in whole or in part.

2. The amount unsatisfied on such execution shall be the amount recoverable with costs from the directors.

"There was ample evidence here that the writ of execution was returned wholly unsatisfied and the only other question was that which is called a constitutional one, namely, whether section 113 was within the power of Parliament.

"In *Macdonald v. Drake* (1906), 16 Man. Reports 220, the main contest seems to have been whether a *de facto* director was liable

under such provision as that now in question and it was held that he was; the case was under the Provincial Act so that the 'constitutional' question could not arise. The case is, however, important, for the view of Richards, J.A., stated on p. 224, as follows:—

"The claim that the liability under section 33 is a penalty seems to me incorrect. Providing that such liability shall exist on the part of directors is, I think, withholding from them, in respect of wages, the freedom which the statute would otherwise give them from personal liability for debts of the Company. As pointed out in *Fitzgerald v. Weidenbeck*, 76 Fed. Rep. 695, persons doing business jointly together without the benefit of a limited liability Act, are each liable for all the debts of the joint concern. That is the ordinary position. The limited liability granted by some statutes to shareholders in corporations is a special privilege, abrogating the ordinary liability of each for all debts. In granting such limit to liability there is nothing unjust in providing that the ordinary liability shall still exist in certain cases. That is all that the legislature has done by enacting section 33.'

"The defendants relied strongly on *Meyer Malt & Grain Co. v. Coombs*, (1933), 2 Dominion Law Reports, page 374, O.R. 259, wherein it was held in the Court of Appeal for Ontario by Masten and Middleton, J.J.A., Latchford, C.J., dissenting, that s. 110 was *ultra vires* of Parliament in that s. 110 would impose personal liability on directors who pay a dividend when their company is insolvent or the payment of which would render the company solvent or impair its capital. As I read the judgment of Masten, J. A., the holding of the majority was that s. 110 imposed a liability on directors so guilty, which liability touched on 'property and civil rights' and so could only flow from provincial jurisdiction. Since the argument, here, however, the question referred by the Governor General to the Supreme Court of Canada as to s. 110 has been answered in favour of its validity (*Reference re Section 110 Dominion Companies Act*, (1934) 4 D.L.R. 6). I think we must hold, following the opinion of Richards, J.A., quoted above and applying the decision in the recent reference, that s. 113 is a limited exception from the exemption to liability as shareholders granted by s. 180 of the Act, and that it is valid and binding on defendants.

"The appeal was dismissed with costs."

*Schumacher versus Moore* (Manitoba) 1934, Dominion Law Reports, vol. 4, page 585.

### Employee is Bound by Agreement not to Engage in Competitive Business

A travelling salesman was employed for several years by a dairy company at Montreal, and in March, 1933, he signed an agreement with the company in which he expressly bound himself that he would not, within sixty days of his leaving their service, secure employment with any similar company in the Island of Montreal, as salesman, agent or otherwise. In June, 1933, a new agreement was made, the employee undertaking that he would not, for a period of 90 days, work for another employee engaged in similar business, over any territory covered by himself at any time while in the company's service, and that he would not, during this period, assist in introducing others to any of the company's customers. This agreement was to be valid even though the employee should be dismissed. The employee continued working for the company under this new agreement until March 31, 1934, when his engagement with the company terminated. He immediately started in the same line of business as the agent of another milk company, known as "The Co-operative," and solicited orders from customers of his former employer. The former employer warned him that if he did not desist from this course of action they would take action, but the employee continued to solicit their customers.

Mr. Justice Curran, in the Superior Court at Montreal, issued an interlocutory injunction, at the request of the employer, restraining their former agent. The judgment stated that the petitioner suffered grave prejudice and damages by the action of the respondent. The contention of the latter that he had signed the agreement under duress and through fear of losing his job, was found to be unjustified. "The court does not find the contract immoral nor in restraint of freedom of the individual, as the respondent must have known what he was doing when he signed the last mentioned contract, as he had been working for the company, as he says himself, for six years, during which period he had ample time to discuss the company's contracts with his fellow drivers, and he had signed at least one other agreement with a very similar restricting clause, and he continued to work for nine months after he signed and had every chance of reading it over, and only stopped working for the petitioner when he was dismissed."

*Mount Royal Dairies, Limited, versus Russian, (Quebec), 1934, Rapports Judiciaires de Québec (Cour Supérieure) vol. 72, page 240.*

### Army Officers and Dominion Civil Servants Subject to Income Tax on Wages Earned in Manitoba.

The Manitoba Court of Appeal, in an action brought by the Attorney General of Manitoba to recover income tax under the Special Income Tax Act, 1933, from a member of the active militia (Permanent Force), found that the Act is applicable to such employees while resident in the Province. The Act imposes a tax of 2 per cent upon all wages, earned or accruing, due to employees after May 1, 1933. It defines "employee" as "any person who is in receipt of or entitled to wages," and provides that "wages" includes all wages, salaries, and emoluments from any source whatsoever, including (i) any compensation for labour or services, measured by the time, piece or otherwise; (ii) the salaries, indemnities, or other remuneration of senators, members of the House of Commons, provincial legislatures, and municipal councils, judges, "and of all persons whatsoever, whether such salaries, indemnities, or other remuneration are paid out of the revenue of His Majesty in right of the Dominion or in right of any province thereof, or any person; (iii) the profit or remuneration of the employee; and (iv) emoluments, perquisites, or privileges incidental to the office or employment of the employee which are reducible to a money value." It also requires employers to collect the tax at the time of payment of wages and to pay it over to the income tax administrator; and imposes a penalty for failure to do so; and also provides if wages are paid without the tax being deducted it shall be the duty of the employee to pay the tax forthwith and all the provisions of certain sections of "The Income Tax Act shall, *mutatis mutandis*, apply to the collection and recovery of the tax so imposed from the employer and employee or either of them."

The majority of the Court (Mr. Justice Trueman, Chief Justice Prendergast and Mr. Justice Richards) held that the tax imposed by the Act is a direct tax, and that an officer of the Active Militia, Permanent Force, is liable therefore with respect to his wages while resident in Manitoba, and that his "wages" included, not only his cash pay, but also allowances for lodging, fuel and light in married officers' quarters in barracks, and the amount deducted under the Militia Pension Act but did not include the deduction of ten per cent under the Income War Tax Act.

Mr. Justice Dennistoun, in a dissenting judgment, held that the soldier has no enforceable contract with the Crown for the payment of wages. What he receives is the King's bounty, not an earned wage, and no one but the King can interfere with it. The King in relation

to the soldier is the King in right of the Dominion. The status of the soldier, is, therefore, different from that of those classes of persons specifically mentioned in sec. 2 (d) (ii) as in receipt of "wages" and the final general words of the subsection do not make taxable the pay and allowances of His Majesty's Forces for the above reasons, and because to attempt to do so would be to derogate from the Kings' prerogative in respect to his troops; the tax on the rental value of the apartment in the barracks is equivalent to a tax on militia quarters belonging to Canada, which is prohibited by sec. 125, the B. N. A. Act; the heat and light, the value of which is sought to be taxed, are necessary to enable the soldier to perform his duty; the possibility that under the provisions of the Act all the military forces in the provinces may be liable to imprisonment for contravening it is a direct interference with the powers of the Dominion to use its troops for military purposes as it sees fit; there is the further objection that deductions for pensions are sought; to be taxed though they have never come into the soldier's hands and will never be available to him unless the Crown so determines; moreover the tax on the ten per cent deduction from the soldier's pay is something the Act never contemplated; finally there is the rule that no tax can be imposed except by words which are clear and the benefit of the doubt is the right of the subject.

Mr. Justice Robson, concurred with the dissenting judgment of Mr. Justice Dennistoun, pointing out that the pay of an army is of importance to its upkeep and morale, and since Militia and Defence is exclusively a Federal subject, the matter of pay is wholly within the Federal power. Taxing an officer's pay is infringing on his status; the alleged right to tax with respect to his quarters and allowances merely emphasizes the objections to the tax itself. The terms "employee" and "wages" should not be strained to cover a doubtful category.

*Attorney-General of Manitoba (Plaintiff) respondent v. Worthington (Defendant) appellant (Manitoba) 1934, Western Weekly Reports, vol. 3, page 658.*

Suits were brought in the County Court of Winnipeg by the Attorney General of Manitoba against certain employees of the Civil Service of Canada, for taxes, being 2 per cent of wages, under the Special Income Tax Act, 1933, chapter 44. Judgment was given against the defendants, and they appealed to the Manitoba Court of Appeal, which dismissed the appeals. The Court of Appeal held that the tax on wages imposed by the Act was a

direct tax, and was therefore *intra vires*. The fact that a person otherwise subject to this tax is employed in the Civil Service of the Dominion does not render the Act inapplicable to him. The expression "wages" as defined in the Act, includes the salary "of any judge of any Dominion or Provincial Court." With respect to the consequent apparent disqualification of the County Court Judge and of the Court of Appeal to deal with this case, the Court held that, there being no judges who are not in a like position, the Court must of necessity proceed with the case.

*Attorney-General for Manitoba vs. Harper, etc. (Manitoba) 1934, Western Weekly Reports, vol. 3, page 681*

### **Workman agreeing to low wages cannot Sue for Arrears**

A plumber's helper claimed arrears of wages alleged to be due to him for work performed for a contractor who was engaged in the construction of the Institute of Neurology for McGill University, Montreal. The claim was made under the Professional Syndicates Act, as amended by the Quebec Legislature in 1931. One of the amendments in that year provided as follows:

14a. If it be stipulated in any contract that workmen, or the members of the syndicate, union or federation of syndicates shall receive a stated wage, such workmen or members, although not a party to the contract, are entitled to the rate of wages therein stated, notwithstanding any renunciation thereto afterwards agreed upon by them, whether express or implied.

During 1933 the University established a scale of minimum wages to be observed on the job, providing that common labourers should receive 30 cents an hour. The defendant company, which held the contract for plumbing, was bound by this scale. The plaintiff was hired by the company on August 24, and worked for 392 hours. He claimed that although plumbers' helpers were not specifically mentioned in the list of trades covered by the scale, the lowest rate there given was 30 cents an hour and a plumber helper should not be paid at a lower rate than a day labourer. Instead he had received the "ridiculous and unreasonable" sum of 15 cents an hour, and he claimed that he should have been paid \$117.60, instead of half that amount which he had accepted under constraint, and with the knowledge that he could claim the difference when the work was over.

The defendant company denied the plaintiff's allegations as not being in accordance with the facts. They held the contract for plumbing, and were bound by the minimum

scale. The plaintiff, they stated, worked 440 hours, and was paid \$66, or at the rate of 15 cents an hour. In regard to the plaintiff's right to be covered by the schedule it was pointed out that plumbers' helpers were not named therein; that they belonged to the apprentice class, learning their trade from the master plumbers, and not being held responsible for plumbing work; that 15 cents an hour was the usual wage for such workers at Montreal; that the plaintiff knew in advance what he would be paid, undertook the work on that condition, and accepted his wages without protest.

Mr. Justice Archambault, in the Superior Court at Montreal, pointed out that there were two questions to be decided in this case: (1) should plumbers' helpers be included in the definition of "common labour," as mentioned in the schedule? and (2) was the plaintiff hired as a plumber's helper?

He answered the first question in the negative. As to the second question, he said the plaintiff was engaged by a master plumber, whose regular helper was sick, and accepted wages at 15 cents an hour in this capacity, being then unemployed. He was not an apprentice plumber, and had no intention of following the plumbing trade. Should he, for that reason, receive the wages of a day labourer? The learned Judge pointed out that nothing in the Professional Syndicates Act hindered a tradesman from working at another trade, in which case his contract would be governed by common law and freedom of contract would then have free play.

In the present case the company had previously had in their employ a plumber's helper to whom they paid 15 cents an hour. The plaintiff knew of this arrangement, and agreed to take the place of this workman at the same rate of pay, and the obligations resulting from the contract were carried out by both parties. The Court held therefore that the plaintiff had no valid claim to the arrears of wages which he claimed.

*Boisvert versus Garth Company (Quebec) 1934 Rapports Judiciaires de Québec (Cour Supérieure)*, vol. 72 page 524.

### **Contract for employment for term of years is severable.**

The owner of a quarry sold out his interests therein as "a going concern", the agreement of sale providing that the purchaser should engage him as superintendent of the quarry for a period of ten years, to date from October 1, 1929, at a salary of \$500 per month. On April 10, 1930, he was dismissed by the company,

who paid him his salary up to April 15. The dismissed superintendent (the plaintiff in this case) alleged that the company had no right to dismiss him; and he demanded acknowledgment of the fact that he was always ready to give all his time to the work; and without prejudice to his right to claim his salary as soon as it should become due, with damages, he instituted an action in the Superior Court to recover the sum of \$250, the balance of his salary for April. The company pleaded that it had dismissed the plaintiff for cause, that is, because he was not observing the conditions of his engagement. The Superior Court dismissed the action, but on appeal by the claimant, the majority of the judges of the Court of King's Bench reversed that judgment and maintained the action. The claimant then obtained a special leave from the Court of King's Bench to appeal to the Supreme Court of Canada. The latter Court maintained the appeal and restored the judgment of the Superior Court with costs both in the Court of King's Bench and in the Supreme Court.

Mr. Justice Rinfret, in the Supreme Court of Canada, remarked that this was one of those cases in which the trial judge is in a better position than the appellate judges to appreciate the facts adduced. "Even if we had gathered a different impression from the evidence," he said, "we should greatly hesitate to substitute our opinion of this question for that of the trial judge." The trial judge came to the conclusion that the plaintiff's dismissal was justified, and that it had been proved that he was not qualified for the duties of his position or for the exercise of the authority which it entailed.

"In the present case," his Lordship said, "there is no doubt that the appellant has dismissed the respondent and that it has therefore repudiated its obligation to keep him in its employ. If it has so acted without legal grounds, it is a breach on its part, and the respondent is entitled to damages. But the contract for hire of services, on account of the personal nature of the obligations it entails, is not susceptible of an order for specific performance. It is not included in the 'cases which admit of it' and in which 'the creditor may demand also a specific performance of the obligation.' The appellant could not physically be compelled to keep the respondent in its employ, any more than the respondent could be physically compelled to remain in the employ of the appellant. In such a case there is involved a question of human will and liberty against which direct execution is powerless. The recourse of the respondent, if he was wrongly dismissed, was

by way of a claim for the damages resulting therefrom. He could not ask the Court to compel the appellant to keep him in its employ. That would have been an impossible sanction.

"The claim of the respondent that the appellant could not, of its own decision, cancel the contract of lease and hire, but that it had to apply to the Court for its cancellation, may therefore be of academical interest, but its discussion is wholly unpractical. The appellant dismissed the respondent from his functions and thus ended the lease of his services. If it acted with no valid reason, the only effectual sanction for its breach would be an order to pay damages. If it acted on sufficient grounds, that is to say with legal justification, the Court has only to decide that point when the case is submitted to its judgment. That is the logical and reasonable solution"...

"We have no hesitation in saying that, in the circumstances, if the respondent neglected his duties and failed to discharge the obligations deriving at the same time from his agreement and from the general law governing the contracts for hire of services, his default made him subject to the penalties provided for in Art. 1065 of the Civil Code; the appellant had the right of cancellation, and that

right could be limited to the contract of engagement, without any effect on the sale made simultaneously."

The judgment was to the effect that a contract, such as was made in this case, selling a business, with an undertaking that the vendor should be employed for a period of years, is severable; and that the purchaser may discharge the vendor for cause as in other contracts of employment. In such a case it is not necessary that the company should have the employee's agreement cancelled by the Court before discharging him.

*Dupré Quarries Limited, versus Dupré* (Quebec, and Supreme Court of Canada) 1934 *Dominion Law Reports*, vol. 4, page 618.

By legislation adopted at the last session of the Quebec Legislature (LABOUR GAZETTE, May, 1934, page 438) it was provided that when male labour is substituted for female labour on work habitually done by women the rates of wages fixed by the Minimum Wage Commission shall be paid to such male labour. Judgment in the first prosecution under this provision was given recently by Chief Judge Perrault when he fined a Montreal firm \$200 and costs, or, in lieu of payment of fine, seizure of the assets of the company to that extent.

# WAGES AND HOURS OF LABOUR IN CANADA

## 1929, 1933 and 1934

THE present bulletin is the eighteenth in the series on Wages and Hours of Labour, the first having been issued as a supplement to the LABOUR GAZETTE for March, 1921, giving figures as to wages and hours of labour in certain trades in various cities in Canada from 1901 to 1920, with index numbers by groups based on wages in 1913 as 100. Subsequent reports, in most cases issued as supplements to the LABOUR GAZETTE for January each year, brought these figures down to date with extensions from time to time to include more industries and classes of labour.

Certain of these reports, however, contained special features. Report No. 5 (1923) dealt with Hours of Labour in Canada and Other Countries. Report No. 3 (January, 1922) included an appendix with statistics of wages and hours in coal mining in Canada from 1900 to 1921 with index numbers for the three principal districts. Report No. 7 (January, 1925) included an appendix with figures for agriculture from 1914 to 1923. Report No. 11 (January, 1928) contained an appendix on wages of employees of steam railways, considerably increasing the information for the years since 1917 with a more extensive record from 1901 to 1927 and also a new series of index numbers. Each report from No. 7 (January, 1925), to No. 14 (January, 1931), contained data not only for the previous year but back to 1920, except that figures for 1922, 1923 and 1924, the years of least change, were omitted from some of the tables owing to lack of space. Report No. 15, issued in January, 1932, contained data for the years 1926, 1930 and 1931, with figures for 1920 also in some cases. Report No. 16, issued in January, 1933, afforded figures for 1930, 1931 and 1932 with figures for 1920 and 1926 also in some tables. Report No. 17, issued in January, 1934, contained data for 1929, 1932 and 1933 with figures for 1920, 1926 and 1930 to 1933 in some tables. For coal mining and steam railways wages for the years 1920 to 1933 were given.

The present report gives data for the years 1929, 1933 and 1934, but the tables on building, printing, metal trades and electric railways contain data for 1920, 1926 and 1930 to 1934, and the table on steam railways for the years from 1920 to 1934, inclusive. Appendices on minimum wage rates in 1934 under provincial legislation, on wages in agriculture for 1933 and previous years, and on earnings of steam railway employees in recent

years with numbers employed in 1933, are included in the report, as before. An appendix on average daily earnings of coal miners, the average number of days worked and the average number of wage earners each year since 1921, given for the first time in Report No. 16, is included with figures down to 1933.

In Report No. 15 (January, 1932) the number of cities for which data was given in Table I as to building trades and electric railways was increased to approximately forty, and in the case of printing trades to fifteen, and these cities are again covered in the present report. Previously this table covered only thirteen cities, except that data for building trades in Windsor, Ont., was included, beginning with the report for 1928. Sheet metal workers employed in building and construction have been included with building trades since 1927, while sheet metal workers in factories have been included in the table on manufacturing industries. The section of the table on metal trades previously given was omitted from Reports No. 15 and 16 for 1931 and 1932 but figures for these trades appeared in the tables of sample rates of wages and hours in the sections of Table X on foundries and machine shops and other metal manufacturing industries. This section of Table No. I was, however, included in Report No. 17 with figures for 1920, 1926 and 1930 to 1933 and is again included in the present report. As in previous reports figures on wages for the metal trades in mines and on railways appear in the tables on those industries. Table No. IX on common labour in factories has been enlarged to include a larger number of cities and more samples for each, especially in the larger cities.

### Nature and Scope of Report

The main object of these reports is to show the changes in wages rates and in hours of labour during the periods covered. The figures given in each report afford a continuous record for the years included, the data being from the same sources as far as is possible. Whenever a new source of information becomes available, the figures for previous years are secured, if possible, and the record is revised accordingly.

Information is compiled from reports of representative employers and of trade unions secured annually, and also from union agreements. These reports are supplemented by

figures obtained by officers of the Department and by resident correspondents of the *LABOUR GAZETTE* in the principal industrial centres.

Wages in manufacturing are shown by samples numbered one, two, etc., each sample showing the predominant rate in a certain establishment; in some cases, for large establishments two or three samples are given. For common labour in factories, sample rates are given by localities for the principal manufacturing centres.

For the following industries wages are given in the form of samples as in the case of factory labour: grain elevators, electric current production and transmission, telephones, laundries, logging and sawmilling, and metal mining. The locality in each case is not given as it would in many instances make possible the identification of the particular establishment.

Figures for particular localities are given for building, metal, and printing trades, electric railways and civic employees in Tables I and II, and for trucking and cartage, and longshoremen in Table III, also for common labour in factories in Table IV.

The statistics as to building trades show the prevailing rates of wages and hours of labour for nine classes of labour for the years 1920, 1926, 1930, 1931, 1932, 1933 and 1934 for the building season beginning in the spring of each year. During the year 1931, however, changes occurred later in the season more extensively than is usual, and the rates in effect at the end of the year were therefore obtained and included. For 1933 a similar survey was made again toward the end of the year in several cities. As in all previous years, changes in rates reported down to the end of the year, from the sources mentioned above, are included.

On steam railways, wages of employees on the regular staffs are fixed according to agreements between the several railways and the employees, members of the organizations of railway employees, the principal railways having the same rates for nearly all the principal classes. The figures published are taken from these agreements.

In coal mining, the wages in the principal districts are arranged by agreements between the coal mining operators and the employees, in some cases represented by unions and in others by committees of employees. The figures published from 1920 to 1933 were taken from such agreements. The figures for average earnings of contract miners, however, were received from representative employers in each district. In some of the mines in these districts the wages of unorganized employees are somewhat lower than the rates in such agreements. For the present report, state-

ments as to wage rates and hours of labour have been requested from the operators of all the larger mines throughout Canada and the figures so secured have been compiled by provinces or districts. The resulting figures include those for many mines not operated under agreements as to wages and working conditions, and cover the mines in New Brunswick, Saskatchewan and the interior of British Columbia for which figures were not previously published.

In metal mining the rates of wages and hours of labour are shown as samples for mines in the various parts of Canada, secured from representative employers.

In logging, Table VII, the data each year is for the season beginning in the autumn and ending in the spring in Eastern Canada.

### Hours of Labour

In earlier reports the hours of labour shown throughout were the standard or regular hours per week, per day, etc., and did not indicate the hours actually worked either overtime or on short time. During 1931 a number of establishments in many of the manufacturing industries reported operations on a short time basis. In the report covering that year, No. 15, wages for such establishments were given on an hourly basis or brought to a basis of full time earnings per week, per day, etc., the resulting figures as to wage rates being therefore on the same basis with those for 1926 and 1930 in the tables.

In Report No. 16, with figures for 1930, 1931 and 1932, in the tables on manufacturing industries, the hours of labour for these years were those reported by employers, whether short time or regular hours, and the wage rates were brought to an hourly basis, except in certain industries, clothing, bread, cake, biscuit, candy, brewing and paper box making for which regular hours were reported mainly. The same procedure was followed in Report No. 17 and in the present report except that wages for boot and shoe manufacturing are given on a weekly basis with the hours shown as reported. In this industry, as in some instances in clothing manufacturing, the hours actually worked by individual piece workers are usually not reported and the hours shown are those on which the department or factory is operated.

### Changes in Wages since 1920

It will be seen from the tables of index numbers that by 1920 wages had reached levels almost one hundred per cent higher than in 1913, in some groups the increase being over one hundred per cent while for building and printing trades the increases were appreciably less, being only about eighty

per cent. After 1920 all groups showed some decreases, although printing trades and coal mining reached the peak in 1921 instead of 1920, declining somewhat thereafter. The decreases in coal mining in 1925 were comparatively steep and tended to reduce the average for the six groups averaged for the period back to 1901. From 1925 to 1930 the movement was upward in each group.

In 1930 the index numbers for most of the groups were slightly higher but that for lumbering declined slightly. In 1931 all groups were downward except printing trades and coal mining. In 1932 and 1933 all groups were down, the greatest decreases being in lumbering and building trades.

In 1934 lumbering showed substantial increases, factory labour also advanced appreciably and coal mining slightly while the other groups were lower.

In the building trades up to 1919 there were smaller increases than in any of the other groups, but in 1920 there were considerable increases. In 1921 decreases of 10 cents per hour were general and in 1922 decreases of 5 cents per hour were numerous. In 1923, 1924 and in 1925 while there were upward movements in the average it was due to increases in particular trades and in certain cities, and not to an upward movement general for most of the trades and localities. From 1926 to 1930, the upward movement was somewhat more general. During 1931 there were numerous decreases, in some localities the reduction being general while in others it was confined to certain trades. During 1932 and 1933 the decreases were general averaging about ten per cent, while in 1934 there were decreases in some trades in certain cities but no general downward

TABLE OF INDEX NUMBERS OF RATES OF WAGES FOR VARIOUS CLASSES OF LABOUR IN CANADA  
1901-1934  
(Rates in 1913=100)

Year	Building Trades (a)	Metal Trades (b)	Printing Trades (c)	Electric Railways (d)	Steam Railways (e)	Coal Mining (f)	* Average	Common Factory Labour	Miscellaneous Factory Trades (g)	Logging and Saw-milling (g)

\*Simple average of six preceding columns.

†Including some increases effected near the end of the year.

‡Including a ten per cent decrease for certain classes toward the end of the year.

(a) Seven trades from 1901 to 1920, eight from 1921 to 1926, nine for 1927 to 1934; 13 cities to 1927, 14 cities to 1930, thereafter 32 to 42 cities.

(b) Five trades from 1901 to 1926, four for 1927 to 1934.

(c) Two trades from 1901 to 1920, four for 1921 and 1922, six from 1923 to 1934.

(d) Two classes from 1901 to 1920, five classes 1921 to 1934.

(e) Twenty-three classes.

(f) Four classes 1901 to 1920, twelve classes 1921 to 1934.

(g) The number of samples (and industries) increased each year 1920 to 1930; machine operators, helpers, etc. also included.

tendency appeared. In some cases there were increases so that the average decrease was about three per cent.

In the metal trades the increase in wage rates from 1915 to 1918 was greater than in most of the other groups, there being a good demand for labour in the manufacture of munitions. During the industrial activity in 1919 and 1920 further increases were made, but in 1921 and 1922 considerable decreases occurred. In 1923 and 1924 some recovery was experienced, in 1925 there was practically no change, from 1926 to 1930 there were some slight changes upward, but during 1931 the changes were downward, while during 1932 and 1933 the decreases averaged five per cent and three per cent respectively. In 1934 there were comparatively few changes, with some increases, so that the average was down less than one per cent.

In the printing trades up to 1920 increases were about the same as in the building trades, but in 1921 when many of the three or five-year agreements between employers and the unions expired, rates were advanced and hours were reduced in many cases. Increases appeared each year thereafter down to 1931. During 1932 decreases of ten per cent were general in the western provinces and were made in some cities in the east. In 1933 the decreases were general, averaging five per cent. In 1934, while there were further decreases, there were some increases, the average being down less than one per cent.

In electric railway service, rates had almost doubled by 1920, but declined slightly in 1921 and 1922, recovering somewhat in 1923 and very gradually each year thereafter until 1931 after which reductions occurred each year.

Since 1930, on many of these railways, with reduced traffic, operating costs were lowered to some extent by reducing hours per day, and therefore daily wages, instead of reducing hourly rates. In 1934 very few changes in wages were made so that the index member was practically unchanged.

In steam railway employment, wage increases were considerable in 1918, 1919 and 1920, but in 1921, decreases averaging about twelve per cent for all classes were made and in 1922 decreases for shop crafts, maintenance of way employees and for freight handlers, clerks, etc., were made, averaging about ten per cent. In 1926, at the end of the year, wages of conductors, trainmen, brakemen, baggagemen, and yardmen were advanced about 6 per cent, that is by half the amount of the reduction in 1921, and during 1927 similar increases were made in rates for other classes. In 1929, increases were secured by shop and maintenance of way employees and by certain classes of train crews on some lines.

In 1931, while practically all classes were to a great extent on short time, changes in rates were not made until the end of the year when a ten per cent deduction from each employee's pay was made for train, engine and telegraph service employees from December first. In the early months of 1932 the same deduction was applied to other classes.

In 1933, earnings of employees in engine, train and telegraph service were subjected to a deduction of twenty per cent from May to October, inclusive, and fifteen per cent thereafter. The deduction for most of the other classes was increased to fifteen per cent in December.

Toward the end of 1934 it was arranged that the general deduction of fifteen per cent would be changed to one of twelve per cent on January, 1935 and to ten per cent on May 1, 1935.

In coal mining the index number reached its peak in 1921, increases having been made in the closing weeks of 1920. In 1922 decreases were made in Nova Scotia and Vancouver Island and in 1923 and 1924 slight decreases occurred in the latter. A substantial decrease occurred in Alberta and southeastern British Columbia in 1924. In 1925 decreases occurred in the three principal districts, being especially steep in Alberta and southeastern British Columbia. Slight increases, however, were provided for a number of classes in some of the mines in Alberta toward the end of the year. In 1926, reductions were effected in Nova Scotia but in the other chief fields were practically unchanged. Slight increases were made in some mines in Alberta in 1928. In Nova Scotia in February, 1930, rates for labourers were changed by increases of 5 cents to 15 cents per day and certain other datal classes were slightly increased. During 1931 rates of wages were steady but the industry suffered greatly from short time, that is, collieries were operated less than six days per week to a great extent. In 1932 in Nova Scotia rates were reduced ten per cent in March, except that a minimum of \$3.25 per day was provided for in the principal mines. In the other districts rates were reduced only in a few of the smaller mines. In 1933, wages in the Drumheller district in Alberta were reduced over ten per cent. In Nova Scotia, rates were unchanged in the principal mines but there were reductions of about fifteen per cent in certain mines of medium size. In 1934 partial restorations of these reductions were made in some of these and some increases occurred in other districts, while decreases occurred in New Brunswick. The index number, therefore, shows a slight increase. The index number for 1901 to 1934 does not include New Brunswick, Saskatchewan and the

Princeton district in British Columbia. The inclusion of these figures for 1934, when weighted according to numbers of miners employed, makes no change in the result.

Factory labour had shown almost the greatest percentage increases up to 1920, both for common labour and for the various trades, but steep decreases appeared from 1921 to 1923 after which the trend was upward until 1931 when a considerable number of decreases occurred. In 1932 decreases in rates were numerous and steep in some cases. There was, however, a pronounced tendency to reduce hours per week or per day or both, frequently on a short time basis, with relatively small reductions in hourly rates. In some cases, where hours per day were reduced more than daily wages, the hourly rate became higher. In 1933, rates were again generally downward but less steeply. In 1934 there were numerous increases in nearly all of the manufacturing industries but comparatively few decreases so that the index number rose by nearly three per cent.

In logging and sawmilling steep increases in wages appeared up to 1920, followed by particularly steep decreases in 1921, after which substantial increases occurred in 1923 and 1924, with a decrease in 1925 and slight increases each year thereafter until 1930 when more decreases than increases appeared. During 1931 decreases were general, and again in 1932, wage reductions of twenty per cent being quite common. In 1933, wages were still downward but there was a pronounced upward trend toward the end of the year for the ensuing season. In 1934, substantial increases in wages were general both in logging and in sawmills so that the index number rose by about twenty per cent.

### Index Numbers of Wage Rates

In Report No. 1 tables of index numbers were given in order to show the general trend of the movement in rates of wages. The first set of index numbers was for the rates of wages from 1901 to 1920 in the thirteen selected cities. For each series of rates, that is, for each trade or occupation in each locality, index numbers were calculated both from the hourly rates and from the weekly rates, and these index numbers were averaged for all localities, by groups, thus indicating the relative changes in weekly rates and in hourly rates. The year 1913 was taken as the base period, that is, the rate for 1913 in each case was taken as 100, so that the index numbers showed the percentage changes in rates from time to time prior to and since that date. An average was also made for all of the series in these tables, in order to indicate the general trend in wages in such

trades as a whole. In making the average index numbers for the six groups the simple arithmetical averages were taken, no allowance being made for the importance of each trade or group by using a system of weighting. In Report No. 3 this table of index numbers for the thirteen cities was brought down to September, 1921.

In subsequent reports the index numbers of hourly rates from 1901 to 1921 have been reproduced, with figures since 1921 calculated by ascertaining the average increase or decrease per cent in the figures for each group each year from the figures for the preceding year and adjusting the group index number accordingly. The index numbers therefore show approximately the movement of wage rates in each group for the past year as compared with the movement in previous years and show current levels as compared with levels in 1913. In Report No. 3 index numbers of daily wages in coal mining were given, calculated in the same manner as the index numbers in Report No. 1. The index number for the coal mining group since 1921 has been calculated in the same manner as those for the other groups. The index numbers for metal trades, previously calculated from Section *b* in Table I, omitted for 1931 and 1932, were calculated from the average percentage changes in the samples for such trades in Table X for those years.

A table of index numbers of wages for factory trades, for common labour in factories, and for lumbering, logging and sawmilling, calculated from the sample rates published was also given for the period 1911 to 1920 in Report No. 1. These figures have been brought down to 1934 in the same manner as the other index numbers since 1921 were calculated.

The classes of labour for which rates were used for the calculation of the index number table for the full period 1901 to 1934 are, in the main, skilled trades; and practically all of these classes, including the unskilled, are organized to a great extent in trade and labour unions. These index numbers, therefore, show the trend of wage rates in a number of organized occupations whose members, except coal miners and steam railway employees, work chiefly in cities. They do not, however, indicate the changes in wages outside of industrial centres.

The index numbers calculated from sample rates of wages in factories show the trend of wages for labour in manufacturing industries in which there are many establishments in small centres as well as in cities. The figures for lumbering cover sawmilling in both large and small centres and logging in the principal districts.

\* During the 1934 building season agreements approved by Order in Council under the Quebec Collective Labour Agreements Extension Act, 1934, established minimum rates of wages for various trades in several localities and surrounding districts. Such rates are given in Appendix "A." The rates of wages in the above table include those paid before the agreements came into force. Hours of labour in the building industry are

\*The range of hours shown are full-time weekly hours; since 1931 actual shop hours in many establishments have been on a short time basis as low as 24 hours per week; a 40 hour week has been reported as standard in many cases. Data for metal trades on steam railways and in mines appear in tables for those industries.

\* Maximum rates based on length of service; in most cities bus drivers, on lines operated in connection with street railways, receive the same maximum rates of wages as one man car operators.

† Including shedmen, pitmen, cleaners, blacksmiths, carpenters, painters, etc.

‡ Including armature winders, wiremen, etc.

§ Including troublemen, and groundmen in some cases; in some localities line maintenance work is performed by employees of light, heat and power distribution utilities.

(a) Deduction from earnings, 10 per cent.

(b) Deduction from earnings: 10 per cent in 1932 and 1933; 15 per cent in 1934.

(c) Per month.

(d) In summer 54 cents per hour, two men cars, 59 cents, one man cars, 42 hours per week.

(e) Deduction from earnings: in 1932, 5 per cent and up; in 1933, 6 per cent and up; in 1934, 10 per cent and up.

(f) Deduction from earnings: in 1932, 4 per cent; in 1933 and 1934, 10 per cent.

(g) Deduction from earnings: in 1932, 4 to 8 per cent and up; in 1933 and 1934, 4 to 10 per cent.

(h) Deduction from earnings since Dec. 1, 1932, 5 per cent.

(j) On October 1, 1920, 65 cents per hour.

(k) On October 1, 1920, 50 cents per hour.

(l) On June 1, 1920, 50 cents per hour.

(m) No two men cars in operation in Regina since 1921; in Calgary very few.

Shop labourers, per hour.....	cents	48½	40	35	38	40	40-42

\*Differentials on certain lines or divisions above these rates. Nearly all classes are on the basic 8-hour day with time and one-half for overtime, but in some cases some other consideration has been arranged.

†Machinists; boiler-makers; blacksmiths; plumbers, etc.; sheet metal workers; cabinet makers; carpenters, coach, locomotive and bench; welders, etc.

‡Freight car carpenters; freight car painters; car inspectors, car repairers, etc.

§Since 1918 employees are allowed one minute extra, for checking in and out, for each hour actually worked, thereby increasing earnings approximately one cent per hour.

(a) On Western lines Port Arthur and west, until 1929 in addition to these rates boiler-makers' helpers received 5½ cents; blacksmiths' helpers, 4 cents, and other helpers 3 cents; since May 1, 1929, the differentials on western lines were boiler-makers' helpers 4 cents, other helpers 2 cents.

(b) Deductions from each employee's earnings on basic rates effective as follows: Train, engine and telegraph service, 10 per cent Dec. 1, 1931; 20 per cent May 1, 1933; 15 per cent Nov. 1, 1933; Maintenance of way and bridge and building, 10 per cent May 1, 1932; 15 per cent Dec. 1, 1933; Locomotive and car shops, 10 per cent April 1, 1932; 15 per cent Dec. 16, 1933, with certain exceptions. (LABOUR GAZETTE, December, 1933, page 1212.) Deduction amended for all classes effective as follows: Jan. 1, 1933, 12 per cent; May 1, 1933, 10 per cent. (LABOUR GAZETTE, December, 1934, page 991.)

## APPENDIX A

**Wages and Hours of Labour under Provincial Minimum Wage Legislation and on Federal Government Contracts in Canada**

Seven of the provinces of Canada have in effect legislation providing for minimum wages for female employees in certain industries and occupations through Boards or Commissions which establish and enforce the minimum rates, and there is also legislation for the restriction of hours of labour. In Alberta, Manitoba, Ontario and Quebec the minimum rates for female employees are applicable to males in certain respects, as noted in the table for each province. Minimum wage legislation for female employees became effective in the various provinces as follows: British Columbia and Manitoba in 1918; Saskatchewan in 1919; Alberta and Ontario in 1920; in Quebec in 1926, the statute having been passed in 1919; in Nova Scotia in 1930, the statute having been passed in 1920. In New Brunswick a statute was passed in 1930 to come into force on proclamation but has not yet been proclaimed.

Hours of labour are regulated in some of the provinces by the Minimum Wage Boards and in others under the factory acts, etc. Footnotes to the tables indicate the regulations as to hours and under what authority if not under orders of the Minimum Wage Boards.

In 1934 an amendment to the Ontario Minimum Wage Act specified the hours of labour for which the minimum rates set for female employees were to be paid, varying according to localities by population, work beyond these hours to be paid for at not less than the minimum rates. Formerly under orders of the Board, hours for which the minimum rates were payable had been specified in certain cases, laundries, hotels and restaurants, theatres, retail stores, and in Toronto shoe shine parlours, and the only other restrictions as to hours were those in the factories acts, etc. The statute was amended to provide that females could not be replaced by males at less than the minimum rates set for females.

In 1934 the Quebec Minimum Wage Act was amended to provide that males could not be employed in work ordinarily performed by females (in the opinion of the Commission) at rates of wages less than the minimum for females.

The accompanying tables and statements as to minimum rates of wages and as to hours and other working conditions under minimum wage boards etc. give information as to the regulations in effect at the end of 1934. The more important of the rules for the applica-

tion of the rates under the orders have been given in footnotes. For complete information it is necessary to refer to the orders as issued by the various provincial boards. These have been given in summary form in the *LABOUR GAZETTE* from time to time as issued. In some provinces these orders include regulations as to employment conditions, sanitary conditions, etc. The boards have power to issue licences for lower rates of pay for handicapped workers and to meet special conditions in the nature of emergencies.

Legislation providing for the establishment of minimum wages for male employees to some extent has been enacted in British Columbia, Manitoba, Quebec and New Brunswick.

In British Columbia minimum wage legislation for male employees only was enacted in 1925, but was replaced by new statutes in 1929 and again in 1934. Under the Male Minimum Wage Act, 1934, a Board of Industrial Relations was appointed to administer this statute and the Female Minimum Wage Act, 1934, which replaced that of 1920, as well as the Hours of Work Act, 1934. This Board has issued several orders applying to males in certain industries, as well as adding to and amending previous orders applying to females.

In Manitoba in 1934 amendments to the Minimum Wage Act provided that the terms of this statute might by Order in Council be extended to all classes of workers and industries. Minimum rates for certain classes of male employees have been established as a result.

In New Brunswick in 1934 the Forest Operations and Commission Act provided for the establishment of minimum wages in logging and lumbering.

In Quebec in 1934 the Forest Operations Commission Act, provided for the regulation of working conditions in logging and lumbering by a Commission. The Quebec Collective Labour Agreements Extension Act, 1934, provided that the rates of wages and hours of labour specified in a collective agreement between employers and employees may on application to the Minister of Labour be extended by Order in Council to all employers and workers in the industry in the district in the scope of the agreement.

In Alberta, among the provisions of the Department of Trade and Industry Act, 1934, is one providing for codes to regulate trade

practices and to set minimum standards of wages and hours of labour, which may be made binding by Order in Council on all engaged in the trade. Certain trades are specified in the statute and any other trade may be brought under it by Order in Council on request of a representative number of those engaged in it. No action under these provisions has been reported.

### **Minimum Wage Rates on Federal Government Contracts**

In accordance with a Resolution of the House of Commons in 1900, the Fair Wages Policy of the Federal Government has provided for the observance of rates of wages generally accepted as current for competent workmen in the district where the work was performed, or in the absence of current rates for fair and reasonable rates. This policy applied to building and construction work and to the manufacture of government supplies.

In 1922 the application of this policy by the various departments of the government was standardized under an Order in Council, setting forth the labour conditions to be inserted in contracts for building and construction and for the manufacture and supply of fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees; mail bags, letter boxes, and other postal stores.

In 1930, the Fair Wage and Eight Hour Day Act was passed, applicable to all contracts for construction, remodelling, repair or demolition of any Federal work. This statute provides for the observance of current rates of wages and requires also that wages shall in all cases be such as are fair and reasonable

and that the working hours are not to exceed eight a day.

On December 31, 1934, the labour conditions previously applicable to contracts for the manufacture of various classes of Government supplies as listed above, were rescinded and new conditions substituted therefor. (LABOUR GAZETTE, January, 1935, page 24.)

The requirement for the payment of wages not less than current rates or fair and reasonable rates, if there are no current rates, is retained, but it is also provided that males and females under 18 years of age will be entitled to rates of wages not less than those provided for women and girls in the minimum wage scales of the respective provinces. In certain of the Maritime Provinces where no minimum wage legislation is in effect, the contractors are required to pay the males and females under 18 years of age wages not less than those provided for women and girls under the Minimum Wage Act of the Province of Nova Scotia.

It is also provided that in no event shall the wage rate for male workers 18 years of age and over be less than 30 cents per hour, and for female workers, 18 years of age and over, 20 cents per hour, but in any cases where the Provincial Minimum Wage laws require the payment of higher wages than those set out above, such higher rates shall apply in the execution of Federal contract work. For instance for a 50 hour week on a Federal Government contract a male 18 years of age and over, whether experienced or inexperienced, must be paid not less than \$15 and a female \$10 even if the provincial minimum scale may provide \$6, \$7, \$8, etc., but if the provincial minimum scale is in excess of \$15 in the case of male and \$10 in the case of female workers then the provincial scale must prevail.

## I.—MINIMUM WAGES RATE FOR FEMALE EMPLOYEES IN NOVA SCOTIA\*

Industries and Occupations	Minimum Wages per Week			Hours per Week for which minimum wage rates payable ↓
	Experienced workers	Inexperienced workers over 18 years ↑	Young Girls under 18 years ↑	
(a) Food Trades including making of confectionery, biscuits, chocolates, grocery specialties, together with bakeries and all allied industries: Cities and towns of 17,000 population and over..... (a) Textile and Needle Trades and allied sewing trades, including weaving, knitting, spinning, making of wearing apparel and the working in and on leather goods, boots, shoes, furs, etc. Cities and towns of 17,000 population and over..... All towns under 17,000 population.....	11.00 10.00	9.00-10.00b 8.00- 9.00b	7.00-10.00c 6.00- 9.00c	44-50 44-50
(d) Employees in all Factories not dealt with in other orders, and the Paper Trades (which include printing, book binding, paper box making, paper bag making, manufacturing stationery and other trades making paper and paper products): Cities and towns of 17,000 population and over..... All towns under 17,000 population.....	11.00 10.00	9.00-10.00b 8.00- 9.00b	7.00-10.00c 6.00- 9.00c	44-50 44-50
(e) Employees in Shops and Stores, including millinery, dress-making, tailoring and fur sewing situated or in any way connected with a shop or store: Cities and towns of 17,000 population and over..... All towns under 17,000 population.....	11.00 10.00	8.00-10.00c 7.00- 9.00c	7.00-10.00c 6.00- 9.00c	44-50f 44-50f
Operators in the Telephone Companies: Halifax, Sydney, Dartmouth and Glace Bay..... Amherst, New Glasgow, North Sydney, Truro, Yarmouth, Sydney Mines and Westville..... All other incorporated towns.....	11.00 10.00 9.00	9.00-10.00b 8.00- 9.00b 7.00- 8.00b	8.00-10.00c 6.00- 8.00c	44-50 44-50 44-50
(a) Employees in Hotels, Restaurants and Refreshment Rooms: Cities of 17,000 population and over..... Cities and towns between 2,000 and 17,000 population.....	11.00 10.00	9.00-10.00b 8.00- 9.00b	9.00-10.00b 8.00- 9.00b	44-50 44-50
(a) Employees in Laundries, Dry Cleaning Establishments and Dye Works: Halifax..... Sydney and Glace Bay..... All other incorporated towns.....	11.00 11.00 10.00	9.00-10.00b 9.00-10.00b 8.00- 9.00b	7.00-10.00c 7.00-10.00c 6.00- 9.00c	44-50 44-50 44-50

\*Minimum wage orders apply to cities and incorporated towns. Permits may be issued for aged or handicapped workers to work for lower wages and also for variation or suspension of the regulations in exceptional conditions.

†Number of inexperienced adults or young girls or both not to exceed 25 per cent of total female working force except where total working force is less than four.

‡Hours for which minimum rates payable to be not less than 44 nor more than 50 per week. Work in excess of 50 hours to be paid at proportionate rates (except in shops and stores); for less than 44 hours deductions may be made at proportionate rates. Employees required to wait on the premises to be paid for such waiting time. Under Nova Scotia Factory Act, there is no restriction on the normal hours for women in factories but in case of emergency the inspector may permit hours up to 12½ a day and 72½ a week for not more than 36 days in the year.

(a) In these occupations, if lodging is furnished, not more than \$2 may be deducted from wage; if board is furnished not more than \$4 per week for board or 25 cents for each meal may be deducted. In the case of laundries, not more than \$4.50 may be deducted for board and lodging in Halifax and other towns, except in Sydney and Glace Bay where not more than \$1.50 for lodging and \$4.50 for board may be deducted.

(b) After one year, minimum rate for experienced adult to be paid.

(c) After 18 months, minimum rate for experienced adult to be paid, but no young girl on reaching age of 18 to receive less than rate for inexperienced adult.

(d) Pieceworkers to be paid minimum wage scale for first six months. For pieceworkers of more than six months' experience it is sufficient if at least 80 per cent receive the minimum established rate.

(e) A probationary period of three months is allowed for which no wages are stipulated.

(f) From December 15-31, the hours in shops and stores for which the Minimum Wage must be paid may be extended up to 60 a week. Hours in excess of 50 per week except during December 15-31 must be paid for at not less than one and one half times the minimum rate.

Cities and towns between 5,000 and 10,000 population.....	9.00	6.00- 8.00e	54i

\*Minimum wage orders apply throughout the Province, unless otherwise specified. No male worker may be employed at work usually performed by women at less than the minimum rates established for women in that industry. Permits may be issued for aged or handicapped workers to work for less than the minimum wage scale.

†Hours less or more than these to be paid at proportionate rates, except in fur industry. Employees required to wait on the premises to be paid for such waiting time. Under the Industrial Establishments Act, maximum hours per week in factories for females are 55, but permits to work up to 65 hours in cases of emergency may be given by factory inspector for not more than 6 weeks in a year.

(a) Pieceworkers to be paid minimum wage scale for beginners for first six months. For those pieceworkers with six months or more experience, it is sufficient if at least 80 per cent receive the minimum wage rates.

(b) The number of inexperienced workers earning less than the full minimum wage rate for experienced workers is not to exceed one half the total female working force.

(c) The Board may grant permits of variation or suspension of the regulations in exceptional conditions.

(d) After one year, minimum rate for experienced worker to be paid.

(e) After two years, minimum rate for experienced worker to be paid.

(f) Overtime in the fur industry to be paid for at not less than time and one half.

(g) At least 70 per cent of the employees must be paid the full minimum rate, another 20 per cent may be paid the intermediate rate and the remaining 10 per cent the lowest rate in this order.

(h) At least 70 per cent of the employees must be paid the regular minimum rate, another 15 per cent the intermediate rate and the remaining 15 per cent the lowest rate provided in the order for this industry.

(i) Not more than one quarter of total female staff to be inexperienced workers.

(j) Part time employees to be paid 12½ per cent over the minimum wage rates, except those engaged exclusively on Fridays and Saturdays who may be paid at the regular rate.

(k) Minimum wage rates are payable for the regular recognized working period of the establishment.

(l) Or for the usual number of hours normally worked per week in the establishment if less than this number.

## III.—MINIMUM WAGE RATES FOR FEMALE EMPLOYEES IN ONTARIO\*

Industries and Occupations	Minimum Wages per Week			Hours per week †

\*Minimum wages rates apply throughout the Province unless otherwise stated in the order. No male worker may be employed in a class of employment for which a minimum wage is fixed for women at less than the minimum wage. Special permits may be issued to physically handicapped workers or those over 60 years to work for lower wages.

†No young girl worker is to receive less than rate for inexperienced adult on reaching age of 18 years.

‡Minimum weekly rates are payable for these hours or for the usual number of hours per week normally worked in the establishment, if less than this number. No deduction below minimum wage for absence is to exceed value of the time lost. Overtime to be paid at proportionate rates. An employee required to wait on the premises to be paid for such time. Under Factory, Shop and Office Building Act, maximum hours for females are 60 per week, but in factories permits to work up to 12½ hours per day or 72½ hours per week in cases of emergency may be given by the factory inspector for not more than 36 days in the year.

(a) Number of inexperienced adults or young girls not to exceed one third of total number of females; number of inexperienced adults and young girls together not to exceed one half total number of females except where number employed is 4 or less.

(b) All beginners on piecework to be paid not less than the time work rates for beginners during first six months. For pieceworkers of more than six months' experience, it is sufficient if at least 80 per cent earn the minimum rate.

(c) After one year, full rate for experienced worker to be paid.

(d) After 18 months, full rate for experienced worker to be paid.

(e) Lodging not to be charged at more than \$2.00 per week and board \$5.00 per week in Toronto and at \$1.50 and \$4.50 in the rest of the province, with single meals not more than 25 cents, except in the canning industry where not more than \$1.50 for lodging and \$4.50 for board may be charged throughout the province.

(f) For piecework in the canning industry, it is sufficient if 60 per cent of the pieceworkers earn the minimum rate.

(g) All workers between the ages of 18 and 60 years.

(h) All workers under 18 or over 60 years of age.

(i) Not more than one-third of employees to be apprentices, except when staff is less than four.

(j) After 3 years, full rate for experienced worker to be paid.

(k) After 2 years, full rate for experienced worker to be paid.

(l) An employment of ten weeks or more in any period of six months to be deemed sufficient for that of six months.

(m) The number of inexperienced adults or young girls shall in neither case exceed 25 per cent of the total female working force except where the total female working force is less than four.

(n) An employee working less than 40 hours per week to be paid on hourly basis.

(o) A young girl employed in this industry for a year or more before reaching the age of 18 years must be paid rate for experienced adult on reaching the age of 18 years.

(p) After 6 months, full rate for experienced worker to be paid.

(q) Any office worker with a diploma from an accredited business college or commercial department of a high school to be paid experienced worker's rate.

(r) If employed a year or more in an office before reaching the age of 18 years, a worker to receive experienced worker's wage rate on reaching age of 18 years. If working less than a year when reaching age of 18 years, experienced worker's rate to be paid as soon thereafter as the year's experience has been completed.

(s) A learning period of two weeks with no prescribed wage before minimum wage rates applicable.

(t) Number of inexperienced workers not to exceed one quarter of total females employed if there are four or more female employees.

(u) In custom or merchant tailoring establishments, learners may be employed with no minimum wage prescribed for three months before minimum wage rates apply.

\*Minimum wage orders apply throughout the Province to women and to boys under 18. Where a minimum wage is established for female workers, no person over 18 to be employed at less wages in the same class of employment. An Order in Council under the Minimum Wage Act, published in the *Manitoba Gazette* Nov. 24, 1934, and to take effect one month later, makes it obligatory on employers of all workers over 18 years except farm and market gardening workers and private domestic workers to pay a minimum wage of \$12.00 per week of 48 hours or 25 cents per hour in any city and in the municipalities of St. James, St. Vital, Fort Garry, Tuxedo, East Kildonan, West Kildonan, Old Kildonan, Brooklands, Transcona, or any summer resort during June, July, August and September, and of \$10.00 per week or 21 cents per hour in the rest of the Province unless a lower rate is permitted by a regulation under the Minimum Wage Act or unless exempted under the provisions of the Act.

†The wages rates were reduced by 10 per cent from March 1, 1933 until December 31, 1934, except in hotels, restaurants, etc., for which the rates given here have been in effect since August, 1934. The Board may issue a permit granting modification of or exemption from the regulations in cases of exceptional conditions arising.

‡The hours not to exceed these, except that overtime may be worked on permit from the Bureau of Labour but not for more than 36 days in a year, 6 hours in any week or 3 hours in any day. Payment for such overtime to be at regular rates. Any employee required to wait on the premises, is to be paid for such waiting time.

(a) The number of learners and minors not to exceed 25 per cent of the number of experienced female employees in the case of abattoirs, etc., artificial flowers, etc., departmental and retail stores, laundries, etc., and hotels and restaurants; and not to exceed 25 per cent of the total number of female employees in the other orders concerned.

(b) If board or lodging furnished by employer, the cost to the employee is not to exceed \$2 per week for lodging, \$4.50 for board or \$6 for both.

(c) After six months, minimum rate for experienced worker to be paid.

(d) After one year, minimum rate for experienced worker to be paid.

(e) After 18 months, full minimum rate for experienced worker to be paid, (In furrier's establishments, if a minor reaches age of 18 years before this period, she is to serve only one half of the remainder of the learning period before receiving experienced worker's rate.)

(f) After 24 weeks, full minimum rate for experienced worker to be paid. Minors to be classed as learners

(g) After six seasons of at least 10 weeks each, minimum rate for experienced worker to be paid.

(h) If establishment is associated with a shop or store, the same hours to be observed as by the selling staff of the shop or store. In establishments which remain open Saturday evenings, hours may be increased to 11½ for Saturday and 54 per week during December but maximum is 49 hours per week during remainder of year.

(i) After two years, minimum rate for experienced worker to be paid. Minors to be classed as learners.

(j) No minor to work in a rag factory, and no period of adult learning in a rag factory.

(k) Girls under 16 years \$7, girls of 16 years \$8, girls of 17 years \$9. Girls who have been working one year or more to be considered experienced adults on reaching the age of 18 years.

(l) No wage stipulated for probationary period of four weeks. After four seasons of ten weeks each, full minimum rate to be paid.

(m) No wage stipulated for probationary period of four weeks. After two years, full experienced adult rate to be paid. A minor who has been working for one year or more to be considered an experienced adult on reaching the age of 18 years.

(n) Except that 11½ hours may be worked on Saturday.

(o) If working less than 40 hours per week, 30 cents per hour to be paid.

(p) No minor (under 18) to be employed.

(q) Experienced part time workers to be paid 25 cents per hour, inexperienced 20 cents per hour.

(r) A probationary period of 3 months with wage rates not stipulated; after 18 months further experience, full rate for experienced worker to be paid.

(s) After three months, full minimum rate for experienced worker to be paid.

(t) Or 20 cents per hour.

(u) Where more than 8 female workers are employed, not more than 25 per cent of the total office staff to be learners or minors. A business course to be equivalent of experience.

(v) Girls of 15 years \$8, of 16 years \$9, of 17 years \$10, of 17½ years \$10.50.

(w) or 30 cents per hour. (x) \$12 if employed press feeding or sewing machine operating.

\*The Minimum wage orders apply only to cities, but the Board may extend an order to any other part of the Province, and may also declare any order to apply to male employees in shops and factories.

†From September 1, 1933, minimum wage rates were reduced 10 per cent where less than \$13 per week and 15 per cent where \$13 or more, except for workers employed less than full time but more than 24 hours per week when 10 per cent only was deducted, and for workers working less than 24 hours in any week when there was no deduction. From June 29, 1934, reductions were 5 per cent and 10 per cent respectively, and after September 30, 1934, the full rates were restored. On January 11, 1935, rates for experienced adults were reduced by \$1.00 per week except in mail order houses where the reduction was 50 cents per week; rates for learners were also reduced in some cases. The rates shown in this table are those in effect at the end of 1934 before this reduction came into effect.

‡Maximum hours per week: longer hours may only be worked with a permit from the Minimum Wage Board except for laundries and factories where such permit must be obtained from an inspector under the Factories Act, and such overtime to be paid at not less than the minimum rate. If shorter number of hours worked, weekly wages may be reduced proportionately but in no case is payment to be less than 20 cents per hour. (Under the Factories Act inspector may permit a 12½ hour day, 72½ hour week in emergencies for 36 days in the year).

(a) Where meals are furnished by employer, not more than 25 cents a meal to be charged.

(b) In photographic studios and workrooms, apprentices not wholly employed in film developing may work three months at \$5 per week and the following year at the regular learners scale. Learners in knitting, hat and wearing apparel factories and book binderies may work six months at \$7.50 per week and a following year at the regular learners' scale.

(c) After one year, full minimum rate for experienced workers to be paid.

(d) After one year, or on reaching age of 18 years, minor learners to be considered adult learners.

(e) For millinery, dressmaking, tailoring, fur sewing and florist establishments, situated in a shop or store, a probationary period of six months for which no wage rates are stipulated, after which an inexperienced female employee to be paid not less than \$3 per week for six months, \$7 per week for next six months and \$12 for next six months, after which they are to be paid at the full minimum rate for experienced workers.

(f) After 18 months, full minimum rate for experienced worker to be paid.

(g) Between December 15 and December 31, hours may be increased up to 56 per week.

(h) Where board and lodging furnished by employer, minimum wage rate to be \$5.25 per week for experienced workers and \$3.25 for inexperienced workers and kitchen help. Where meals only furnished by employer, minimum wage rate \$7.75 for experienced workers and \$5.75 for inexperienced workers and kitchen help. Where lodging only furnished by employer, minimum wage rate \$10.50 for experienced workers and \$8.50 for inexperienced workers and kitchen help.

(i) After 3 months, full minimum rate for experienced worker to be paid.

(j) A probationary period of three months with no wages; 18 months as learner before being considered an experienced worker.

<i>(j) Ushers in theatres, motion picture houses, music halls, cloakroom attendants in cabarets and dance halls .....</i>	14.00	14.00	9	48½

\*Minimum wage orders apply to cities, towns and villages with a population of 600 or over and to Banff, Lake Louise, Waterton Park and Jasper, except in case of the Fruit and Vegetable Canning, Drying and Packing Industry in which industry the order applies throughout the province. The Factories Act provides that wherever a minimum wage fixed for female workers in any class of employment, no male worker to be employed for less except indentured apprentices.

†Maximum hours, except that a temporary increase may be made with permission of Minimum Wage Board. Such overtime to be paid at regular rates. The minimum wage rate is payable for these maximum hours or for the usual number of hours worked in the establishment if less than these hours and more than forty per week. If usual number of hours less than forty per week, proportionate deductions from the minimum rate may be made.

‡Not more than 25 per cent of total female staff may be apprentices.

(a) After 18 months, full minimum rate for experienced workers to be paid.

(b) After a probationary period of one month with no wages stipulated, 11 months may worked at apprentice scale.

(c) In some cases full minimum rate for experienced worker to be paid after 9 months apprenticeship and in other cases after one year's apprenticeship.

(d) After two months, full minimum wage for experienced worker to be paid.

(e) After one year, full minimum wage for experienced worker to be paid.

(f) 10½ hours on Saturdays.

(g) The minimum wage order applies to all private telephone exchanges in cities, towns and villages having a population of 600 or over and to all public telephone exchanges where the number of subscribers exceeds 250.

(h) Where meals are furnished by employer, not more than \$5 per week to be deducted from wages for meals; where lodging furnished, not more than \$2 per week to be deducted for lodging.

(i) After 3 months, full minimum rate for experienced worker to be paid.

(j) If working more than 28 hours and not more than 48 hours per week \$14.00 per week. Hourly wages 50 cents per hour.

(k) Minimum rates payable if working more than 28 and not more than 48 hours per week.

## VII.—MINIMUM WAGE RATES FOR FEMALE EMPLOYEES IN BRITISH COLUMBIA\*

Industries and Occupations	Minimum Wages per Week			Hours†	
	Experienced Workers	Inexperienced Workers, 18 years and over ‡	Young girls under 18 years ‡	per day	per week

All others.....	14.25	14.25	10.00-13.00e		48

\*Minimum wage orders apply throughout the Province. No male worker over 18 years except indentured apprentices may be employed at a class of employment for which a minimum wage for women is fixed at less than this minimum wage.

†Under Hours of Work Act, maximum hours per week except with permit from the Board of Industrial Relations. Overtime is to be paid pro rata.

‡Special licences may be granted by the Board for employment of adult learners at wage rates fixed in the licences but the number of such licensed employees not to exceed one-seventh of the total number of female employees in the establishment, except if less than seven employees when one adult learner may be allowed, but the aggregate number of female workers with special licences and employees under 18 may not exceed 35 per cent of the total number of female workers in the establishment.

(a) After one year, minimum rate for experienced worker to be paid.

(b) For experienced worker, 27 cents per hour up to 8 hours per day, 40 cents for hours over 8 and up to 12, and 54 cents for any hours in excess of 12, with the exception that in order to handle perishable fruits or vegetables, the regular wage of 27 cents may be paid up to 10 hours in a day. For inexperienced workers, that is those with less than two months' experience, corresponding wage rates are 25 cents, 37½ cents and 50 cents per hour.

(c) For some classes of manufacturing the scale for inexperienced employees is from \$8 to \$12 covering a period of 6 months, in other classes also from \$8 to \$12 but covering a period of one year and in a third class which includes printing and bookbinding, dressmaking, tailoring, manufacture of jewellery, furs, leather goods, boots and shoes, hand-made millinery, and other products the scale is from \$7 to \$13 and covers a period of 18 months. These schedules do not apply to regularly indentured apprentices whose indentures have been approved by the Board.

(e) After two years, minimum rate for experienced workers to apply.

(f) After 9 months, minimum rate for experienced workers to apply.

(g) In an emergency, maximum hours may be increased up to 56 per week, and such overtime to be paid at one and one-half times the rate. Employees customarily on duty between 10 p.m., and 8 a.m., may work 10 hours instead of 8 per day.

(h) After one year, minimum rate for experienced worker to be paid.

(i) Apprenticeship of two years and rate of \$12 to continue until reaching age of 18 years. If age of 18 is reached before completion of one year's apprenticeship, rate for experienced worker to be paid as soon thereafter as the year is completed.

(j) If board or lodging furnished by employer, not more than \$3 per week for lodging and \$5.25 for board to be deducted from wages.

(k) After three months, minimum rate for experienced worker to be paid. For minors, this rate to be paid until age of 18 years.

(l) In case of emergency, 52 hours may be worked but time and one-half to be paid for work over 48 hours per week.

(m) \$14.25 for over 36 and not more than 48 hours per week; \$10.80 for over 18 hours and under 36 hours per week.

## Minimum Wages for Male Employees

### NEW BRUNSWICK

The New Brunswick Forest Operations Commission in October, 1934, fixed a minimum wage in the lumbering industry of \$32 per month and board net, or its equivalent in case of piecework, except for booming and sorting for which the Commission fixed a minimum wage of 20 cents per hour net.

### QUEBEC

#### *Quebec Forests Operations Commissions Act*

In 1934 a Commission for the Supervision and Control of Forest Operations was set up. Every timber-limit holder having a licence to cut timber on public lands, or any contractor undertaking forest operations for such a timber-limit holder must before starting forest operations submit to the Commission a report on the wages, hours, supplies, etc., with the prices to be charged employees for goods and services, and any other information required by the Commission. The wage scale and prices so submitted to the Commission must be posted in the camp and if lower wages are paid, any employee may sue for the difference in court. This Commission may investigate forest operations carried on by any timber-limit holder and report to the Minister of Lands and Forests. The Commission has issued regulations applying to all timber-limit holders and contractors carrying on forest operations on Crown lands, in which it is requested that all men employed in the forests on Crown lands should be paid at least \$30 net per month or its equivalent in case of piecework, this wage not however necessarily to apply to incapacitated old persons or to inexperienced young men.

#### *Quebec Collective Agreements Extension Act*

The text of this Act was printed in the LABOUR GAZETTE, May, 1934, page 417. Under its terms applications may be made to the provincial Minister of Labour by any association of employees or employers which is a party to a collective agreement, to have those terms of such agreement which concern rates of wages and hours of labour made obligatory on all employees and employers in the same trade or industry within the territorial jurisdiction determined by the agreement. The application is then printed in the *Quebec Official Gazette*, and during the following thirty days objections may be made to the Minister of Labour. After this delay, if the Minister of Labour deems that the provisions of the agreement "have acquired a preponderant significance and importance"

that would make the establishment of these conditions advisable, an Order in Council may be passed making the terms obligatory on all employees and employers in the trade or industry in the territory included in the agreement, from the date of the publication of the Order in Council in the *Quebec Official Gazette* and for the duration of the agreement. The provisions of an agreement thus made obligatory are to govern all individual labour contracts in the specified trades and district, except that those individual contracts which are to the advantage of the employee will have effect unless expressly prohibited in the agreement which has been approved by Order in Council. The applications for extension of agreements have been noted and the conditions of the various agreements made obligatory by Orders in Council have been printed in the LABOUR GAZETTE under the title "Collective Labour Agreements Extension Act of Quebec," beginning in the issue of June, 1934. The wage rates thus made obligatory up to the end of 1934 are as follows:

*Granite Cutting.*—An Order in Council the terms of which are published in the LABOUR GAZETTE, January, 1935, page 25, approves an agreement covering all granite cutting operations in connection with buildings, bridge, curbings and monumental works throughout the Province. The hours are limited to 8 hours per day with a 45 hour week, except for quarrymen and inexperienced labourers who may work a maximum of 9 hours per day and 50 hours per week. Employees may, however, work reasonable and necessary overtime for the completion of urgent business, overtime to be paid at time and one-quarter of the regular rates. Wage rates are as follows:—

	Cents per hour
Granite cutters and surface machine operators who are fully competent	
granite cutters.. . . .	50
Quarrymen employed in quarries.. . . .	35
Inexperienced labourers in quarries.. . . .	25
Apprentice granite cutters:	
First year.. . . .	10
Second year.. . . .	20
Third year.. . . .	30

*Bakers and Bread Distributors, Three Rivers.*—The Order in Council dated December 27, 1934, which is to be noted in the LABOUR GAZETTE, February, 1935, approves an agreement covering bakers and bread distributors in Three Rivers, Cap de la Magdeleine and Pointe du Lac, and within a radius of 15 miles of the city of Three Rivers on the north side of the St. Lawrence river, and, also bakeries in the County of Nicolet selling their pro-

ducts within the above limits: Minimum wage rates are as follows:—

	Per week
In bakeries employing three workmen bakers or more:	
1st workman baker.. . . . .	\$22 00
2nd workman baker.. . . . .	18 00
3rd workman baker and others.. . . .	15 00

In bakeries employing less than three workmen bakers:

1st workman baker.. . . . .	\$18 00
2nd workman baker.. . . . .	15 00

Provision is made for proportionately lower or higher minimum rates where production is less than the minimum amount per week stated in the agreement or exceeds the maximum amount stated in the agreement. Apprentices' wages to be fixed by a joint committee.

Bread distributors, until May 31, 1935—\$9 per week, plus 5 per cent on money collected.  
Bread distributors, from June 1, 1935—\$9 per week, plus 7 per cent on money collected.

*Printing Trades, Quebec City and District.*—The agreement approved by Order in Council applies to the judicial districts of Quebec, Beauce and Montmagny. The terms were published in the *LABOUR GAZETTE*, October, 1934, page 911. Hours are 8 per day and 48 per week for day work; 7½ per night and 45 per week for night work. Overtime to be paid at time and one-half of the regular rates; double overtime for work on Sundays and three holidays, except for men regularly employed on night shifts. In the judicial district of Quebec, minimum wage rates are as follows:—

Journeymen typographers, pressmen, stereo-typers and bookbinders—\$25 per week for day work.

Journeymen typographers, pressmen, stereo-typers and bookbinders—\$27 per week for night work.

Foremen—\$3 per week extra.

Apprentices from \$5 per week during first year to \$16 during second half of fifth year for day work, and from \$6 per week during first year to \$18 during second half of fifth year for night work, except for apprentice pressmen working exclusively on non-automatic platen presses for whom the minimum rates are from \$5 per week during first year to \$12 during fifth year for day work, and from \$6 per week during first year to \$13 during fifth year for night work.

In the judicial districts of Beauce and Montmagny, however, this wage schedule may be reduced by 15 per cent.

*Fur Workers, Montreal and District.*—The agreement approved by Order in Council (*LABOUR GAZETTE*, January, 1935, page 26), covers all employers and employees in the furriers' trade on the Island of Montreal and

within a radius of 50 miles of it. Hours are fixed at 44 per week. Overtime, which is allowed only during the months of September to March inclusive is to be paid at time and one-half of the regular rates. Minimum wage rates are as follows:—

	Per week
Cutters—first class.. . . . .	\$35 00
Cutters—second class.. . . . .	28 00
Operators (male)—1st class.. . . . .	28 00
Operators (male)—2nd class.. . . . .	20 00
Operators (female)—1st class.. . . . .	20 00
Operators (female)—2nd class.. . . . .	15 00
Finishers (female)—1st class.. . . . .	18 00
Finishers (female)—2nd class.. . . . .	14 00
Apprentice cutters, trimmers, blockers and nailers:	
1st class.. . . . .	20 00
2nd class.. . . . .	12 00
Examiners—1st class.. . . . .	24 00
Examiners—2nd class.. . . . .	12 00

Apprentices to be paid according to the Minimum Wage Law.

*Shoe Manufacturing.*—The agreement approved by Order in Council, the terms of which were printed in the *LABOUR GAZETTE*, September, 1934, page 825, applies to all male employees in the boot and shoe manufacturing industry throughout the Province. Employees are divided into four trade classes, A, B, C and D. Classes A and B comprise skilled and semi-skilled workers on certain specified operations and are divided into experienced workers and apprentices. Class C comprises experienced boys working on certain specified operations, and their apprentices. Class D comprises helpers and boys, not in other classes, such as sweepers, messengers, general assistants and also on certain specified operations.

In addition to the operations listed under each class in the Order in Council, application has since been made for the addition of other operations to each of these classes.

Minimum hourly wage rates are as follows:—

	Montreal and within radius of 10 miles of Island of Montreal	Quebec and within radius of 10 miles	Other Municipalities of of population 3,000 or more	Rest of Province
	cents	cents	cents	cents
Class A:				
Operators.....	40	38	34	32
Apprentices....	26	25	22	20
Class B:				
Operators.....	34	32	30	27
Apprentices....	21	20	18	17
Class C:				
Operators.....	18	17	16	16
Apprentices....	15	14½	14½	14
Class D:.....	13	12½	12½	12½

*Longshoremen, Montreal.*—The agreement approved by Order in Council, the terms of which were published in the *LABOUR GAZETTE*, April, 1934, page 373 with amendment in *LABOUR GAZETTE*, August, 1934, page 751, applies to the stevedoring trade in the Harbour of Montreal except the work of loading and unloading sailing vessels or self-propelled or towed ships mainly destined for inland or coastal navigation and except for work not directly connected with loading or unloading ocean vessels. Wage rates are as follows:—

	Cents per hour
For day work.....	59
For work between 7 p.m. and 11 p.m. . . . .	66
For work between midnight and 5 a.m. . . . .	79

Double time to be paid for work on Sundays and two holidays and for work during meal hours and until discharged for meals. Higher rates are paid for special cargoes, for grain trimming and bagging and for work in open 'tween deck where there is grain running in a hatch connected with the said open deck, these rates being 70 cents per hour for day work, 78 cents for work between 7 p.m. and 11 p.m., and 90 cents for work between midnight and 5 a.m.

(p) Hourly wage rates for apprentices, by years: 20 cents, 25 cents, 30 cents, 32 cents. Journeymen painters and paperhangers 40 cents.

(q) Includes tinsmith roofer. Rate from May 1, 1935, to be 45 cents.

(r) "Stationary and mechanics enginemen."

(s) And helpers.

*Building Trades.*—Up to the end of 1934, twelve separate Orders in Council had been passed each approving agreements governing one or a number of building trades in certain districts. In most cases the agreements cover a section of the Province comprising several counties as well as the principal city. The wage rates approved by these orders are shown below. Hours are governed by Orders in Council under the Hours of Work Act, Quebec, which provide for maximum hours of 8 per day and 40 per week in this industry, except that between May 1 and October 1 on any contract of a total cost of \$20,000 for a municipal or school corporation, "fabrique" or parish trustees or for an institution, association or corporation, the costs of which are paid or guaranteed for at least 50 per cent by the government of the Province or by a municipal corporation or by both, a two shift system must be established, each shift working 6 hours per day. Wage rates are shown in the table on the previous page.

#### MANITOBA

All minimum wage regulations governing the employment of women in various industries, which are noted above in the table of minimum wage rates for women in Manitoba, apply also to all boys under 18 years of age, except that a separate regulation covers boys in the manufacturing industry in Greater Winnipeg and Brandon, and that in certain of the other regulations, separate wage scales are fixed for boys, as summarized below. An amendment to the Minimum Wage Act also provides that wherever a minimum wage has been fixed for boys under 18, no person over that age may be employed in the same class of employment at a lower rate.

The regulation governing all boys under 18 years working in manufacturing industries in Greater Winnipeg and Brandon (including work in garages and filling stations) provides for maximum hours of 9 per day and 48 per week. Overtime may only be worked on permit from the Bureau of Labour and for not more than 3 hours per day, 6 days per week or 30 days per year. Wage rates are as follows:—

	Per week
First six months.. . . .	\$ 8
Second six months.. . . .	9
After one year.. . . .	10

The regulation governing women and also boys under 18 years in retail stores in Greater Winnipeg and Brandon provides for the payment of the following minimum wage rates to boys:—

	Per week
First six months.. . . .	\$ 8
Second six months.. . . .	9
After one year.. . . .	10

except messenger boys in drug stores for whom the minimum is \$8 per week, and boys working as part time workers at night who must be paid at least 15 cents per hour.

The regulation governing women and also boys under 18 years in laundries and dyeing and cleaning establishments in Winnipeg and St. Boniface also provides a separate minimum wage scale for boys, as follows:—

	Per week
First six months.. . . .	\$ 8
Second six months.. . . .	9
After one year.. . . .	10

The regulation governing the employment of both men and women in hotels, restaurants, clubs, victualling houses and refreshment stands throughout the Province provides for minimum wage rates for men and boys in any city, in St. James, St. Vital, Fort Garry, Tuxedo, East Kildonan, West Kildonan, Old Kildonan, Brooklands, Transcona, or at any summer resort during June, July, August or September, as follows:—

Men (over 18 years)—

\$12 per week or 25 cents per hour.

Boys (under 18 years):

	Per week
First six months.. . . .	\$ 8
Second six months.. . . .	9
After one year.. . . .	10
Bell boys (any age).. . . .	8

*Minimum wage rates in any other portion of the Province:*

Men (over 18 years)—

\$10 per week or 21 cents per hour.

In addition to the above regulations, an Order in Council dated November 17, 1934, and published in the *Manitoba Gazette*, November 24, which was to come into effect one month after such publication, provides that, except when otherwise provided by a regulation under the Minimum Wage Act, and except if exempted under this Act, and except for employment on a farm or market garden or in private domestic service, no person over 18 years of age is to be employed for less than \$12 per week of 48 hours or 25 cents per hour in any city, in the municipalities of St. James, St. Vital, Fort Garry, Tuxedo, East Kildonan, West Kildonan, Old Kildonan, Brooklands, Transcona, or at any summer resort during the months of June, July, August or September; or for less than \$10 per week of 48 hours or 21 cents per hour in the rest of the Province. Where board or lodging is furnished by the employer, not more than \$2.50 per week for lodging, \$4 per

# ERRATUM

On page 98, column 1, under the heading "Manitoba," the following paragraph and table should be inserted:—

An amendment in 1934 to the Fair Wages Act of Manitoba, 1916, provides that the schedules of minimum wages and maximum hours of labour formerly applicable only on public works, building construction under contract, are henceforth applicable also on private works, as follows:—

"Private works means the building, construction, remodelling, demolition or the repairing, at a cost exceeding \$100, of any building or construction work within the Greater

Winnipeg water district, or any city or town which has a population exceeding 2,000 or any other portion of the province to which the provisions of this Act are extended by the Lieutenant-Governor in Council, but shall not include work which is done on property by, or under the immediate direction and control of, the owner, tenant or occupant thereof, if such work be not undertaken with a view to sale or rental of the property."

## Fair Wage Schedule

The following schedule shall apply from and after June 15th, 1934, on "Public Works" and on "Private Work" on contracts not made prior to June 22nd, 1934.

"Winnipeg and Environs" means Winnipeg and within a radius of thirty miles.

"Other than Winnipeg and Environs" means all portions of the province outside said radius of thirty miles.

Occupation	Winnipeg and radius of 30 miles	Other than Winnipeg and radius of 30 miles	Maximum hours per week	Occupation	Winnipeg and radius of 30 miles	Other than Winnipeg and radius of 30 miles	Maximum hours per week
	Minimum	rate per	hour		Minimum	rate per	hour
	\$	\$			\$	\$

(d) Firemen.....	.50	.45	48				

Rule—All men hired in Winnipeg to go into the country to work on buildings shall be paid the City Schedule rate, excepting where other definite agreements are made.

week for board or \$6.50 per week for both may be deducted from wages.

### BRITISH COLUMBIA

Minimum rates of wages in various industries and occupations established by the Board of Industrial Relations under the Male Minimum Wage Act, 1934, are shown below.

The Hours of Work Act, 1934, continues the provisions of the previous statute for a maximum 8 hour day in specified industries, except in those cases where, by custom or agreement, hours are less than 8 on some days, in which case hours on other days may be increased up to 9, but in no case to more than 48 per week. The Act, however, also provides that the Board, with the approval of the Lieutenant Governor in Council, may add to or delete from the list of industries and occupations in the Act, also that the Board may make regulations as to exceptions etc. under certain conditions. Exceptions to the 8 hour day and 48 hour week under regulations of the Board are included in footnotes to the following statement:—

#### Minimum Wage Rates for Male Workers under Orders of the Board of Industrial Relations

<i>* Logging Industry</i> (including pole, tie shingle-bolt, mining-prop, and pile cutting, and all operations in or incidental to driving, rafting, and booming of logs, poles, ties, shingle-bolts, mining-props and piles) (a) (b):	
Part of Province east of Cascade Mountains—	
Cook and bunk house occupations, per day.....	\$2 75
All other employees, per hour.....	35
The rest of the Province—	
Grade and track occupations, per hour.....	37½
Cook and bunk house occupations, per day.....	2 75
All other employees, per hour.....	40
† <i>Sawmills Industry</i> (including sawmills and planing mills) (b) (c), per hour.....	35
† <i>Shingle Industry</i> (including the manufacture of wooden shingles except shingle-bolt operations), per hour.....	40
<i>Wooden Box Manufacturing Industry</i> (c) (d), per hour.....	35
<i>Wood-working Industry</i> (including the manufacture of sash and doors, cabinets, show-cases, office and store fixtures, wood furniture and general millwork products) (d), per hour.....	35
<i>Baking Industry</i> (including manufacture and delivery of bread, biscuits and cakes) (e), per hour.....	40
<i>Construction Industry:</i>	
In Vancouver, Victoria, New Westminster, Nanaimo, Prince Rupert, Esquimalt, Oak Bay, Saanich, West Vancouver, Burnaby and North Vancouver (f), per hour.....	45
The rest of the Province (g), per hour.....	40
‡ <i>Taxicab Drivers</i> in Vancouver, Victoria, Esquimalt, Oak Bay and Saanich, per day.....	2 50

§ *Mercantile Industry* (including wholesale and retail trade):

Employees working 40 hours per week or more (h), per week.....	15 00
Employees working less than 40 hours per week (i), per hour.....	40

*Barbering:*

Employees working 40 hours per week or more, per week.....	15 00
Employees working less than 40 hours per week, per hour.....	40

\* In the logging industry, persons employed in booming operations transporting logs, transporting workmen or supplies, or in the operation and upkeep of donkey engines, or in cook and bunk houses are exempt to the extent necessary to surmount extraordinary conditions which cannot reasonably be otherwise overcome.

† Maximum hours east of Cascade Mountains are 54 per week, except for night shift for which maximum is 48 per week.

‡ Taxicab drivers are not included under the Hours of Work Act or subsequent regulations under it.

§ Except in Vancouver, North Vancouver, West Vancouver, Burnaby, Victoria, Esquimalt, Oak Bay and Saanich, persons employed in the mercantile industry may work 2 hours per day extra on Saturdays and on the day before a statutory holiday, but weekly hours not to exceed 48. In retail establishments in the mercantile industry in mail order, shipping and delivery, it was provided that longer hours than 8 per day might be worked November 19, 1934 and December 31, 1934, but not in excess of 48 per week, except the week ending December 22, 1934. On the three days December 21, 22, and 24, 1934, persons employed in this industry might work 3 hours longer than the 8 hour day, but all overtime in excess of 48 per week to be paid for pro rata.

(a) Watchmen employed in watching logging camps in which operations are entirely suspended are exempt from the minimum wage orders.

(b) Tie-cutting operations were exempt from May 2 to September 30, 1934.

(c) A number, not exceeding 25 per cent of the total number of employees, may be employed at less than the established minimum wage, but at not less than 25 cents per hour.

(d) The minimum wage for workers over 18 and under 21 years is 25 cents per hour.

(e) The minimum wage for workers of 18 years of age is 25 cents, for workers 19 years of age 30 cents, and for workers 20 years 35 cents.

(f) The minimum wage rate for workers over 18 and under 21 years is 35 cents.

(g) The minimum wage rate for workers over 18 and under 21 years is 30 cents.

(h) Minimum weekly rates are payable for a week of 40 hours up to 48 hours. Any time worked in excess of 48 hours to be paid *pro rata*. Workers over 18 and under 21 years who work 40 hours or more per week to be paid from \$9 per week during first three months of employment to \$12.75 after one year.

(i) With a minimum of \$1.60 per day. Workers over 18 and under 21 years working less than 40 hours per week to be paid from 25 cents per hour during first three months of employment to 40 cents after one year, with a minimum of \$1.25 in any one day.

\*In Yukon Territory a few hundred tons of coal have been mined each year, employing two to four miners, usually from 50 to 100 days; in 1933 wages averaged \$12.38 per day for 51 days, four miners. For 1921 the figures were included with British Columbia. In Manitoba coal mining operations were commenced in 1931, employing 38 men for an average of 23 days, wages averaging \$3.46 per day. In 1932, the average number of miners was 6, averaging \$2.84 per day, 1,128 man working days. In 1933, the average number of miners was 10, average wage \$2.10 per day, 2,056 man working days.

†Prolonged dispute during year.

‡Figures calculated by dividing number of man days worked into total wages paid. Prior to 1933 the figures for Nova Scotia included certain employees handling coal at a distance from the mine.

## PRICES IN CANADA AND OTHER COUNTRIES DURING 1934

THE movement in prices in the principal countries of the world was not uniform as in recent years. In 1930 and the two years following there was a general downward movement in wholesale prices, the low point in most countries being reached before the middle of 1933. Thereafter in some countries there was an upward movement which continued during 1934. In some countries, notably France, Belgium, Poland, Italy and Czechoslovakia, prices have continued the downward movement of the last five years with only minor interruptions. In France the decline from the end of 1933 was 9 per cent, in Belgium 4 per cent, Poland 6 per cent, and in Czechoslovakia 13 per cent. A similar comparison shows an advance ranging between 1 and 3 per cent in Canada, Britain, Austria, Norway, Sweden and New Zealand. A somewhat greater increase was experienced in Germany, Denmark, Japan and Australia, while in the United States it was 8 per cent and in Hungary 17 per cent.

### The Movement of Retail Prices and Cost of Living in Canada during 1934

Table I brings down to the end of 1934 the index number of changes in the cost of living in Canada, based on prices in 1913 as 100, and shows the percentage changes in the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the food group in the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number for rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and costs of the various items from 1913 to 1926, weighted according to the importance of each item in workingmen's family expenditure, and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

This index moved within narrow limits during 1934 and the level at the end of the year was the same as at the beginning. The yearly average was, however, slightly higher

than in 1933, which also showed relatively little movement as compared with the decline recorded in the three years preceding. The downward movement commencing early in 1930 continued with only minor interruptions in the summer of 1931 and 1932 until June, 1933, when there was some advance before the end of that year. The recovery continued in the early months of 1934, due to advances in the food and fuel groups, but in the second quarter of the year part of the gain of the preceding nine months was lost with only a partial recovery in the autumn when there were increases, not only in the food and fuel groups, but in clothing and rent also.

On the basis of prices in 1913 as 100 the index declined from 160 in January, 1930, to 120 in June, 1933, a total fall of 25 per cent. At the end of 1934 the index was 123 or 2½ per cent above the low point in 1933.

The index for foods showed greater movement in 1934 than any other of the main groups, advancing 9 per cent during the first three months, as a result mainly of higher prices for meats, butter and potatoes. This, however, was the high point and most of the gain was lost before July, because of substantial declines in the prices of eggs, butter, sugar and potatoes. In the last half of the year the index advanced slightly and in December, 1933, and 13 per cent higher than in February, 1933, which was the low point recorded for this group since pre-war. About half the items in the group were higher at the end of the year than at the beginning.

The index of fuel and lighting declined somewhat in the spring and advanced in the fall, due to seasonal changes in the price of anthracite coal and wood. The year ended with this index slightly higher than at the beginning.

Rent showed greater stability than in the years just preceding, the unbroken decline commencing in 1931 being ended in May and followed by a slight advance in November.

Clothing prices reached the low point of recent years in the summer of 1933. Some advance occurred in the autumn of that year followed by a further increase in the early autumn of 1934, causing a total advance in the index for this group of over 9 per cent. In December, however, some decrease occurred. The sundries group was slightly lower at the end of the year than at the beginning.

## CHANGES IN THE COST OF LIVING IN CANADA SINCE 1914

\*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent 18½%; Clothing, 18½%; Sundries, 20%.

Tables II and III show the cost of a weekly family budget of food, fuel and lighting, and rent in terms of the average prices for the Dominion and by groups for each province.

Beef prices, moving within rather narrow limits in 1934, were at about the same relatively low levels as prevailed in 1933. Sirloin steak rose from 20 cents per pound in January to 22·7 cents in July and then declined to 19·8 cents in December. The average price for the year was 21·4 cents per pound as compared with 21 cents in 1933; 24·5 cents in 1932; 28·7 cents in 1931, and 35·6 cents in 1930. Cheaper cuts showed a similar movement. Prices, in the main, were lower in the Prairie provinces than in other parts of the Dominion. The price of mutton changed little during the year, averaging 20 cents per pound as compared with 18·8 cents the previous year and 20·9 cents in 1932. Prices of pork and bacon continued the advance which commenced early in 1933. The high point for fresh pork roast in 1934 was 21·7 cents per pound in August as compared with the low point in many years of 12·1 cents per pound in March, 1933. The price of bacon has more than doubled since early in 1933, rising steadily from 17·2 cents per pound in March, 1933, to a high point in 1934 of 36·2 cents per pound in October, since when there has been a decline to 32·7 cents in December. The price of fresh pork was lower in Quebec and the Prairie provinces than in other parts but bacon averaged higher in the western provinces than in the others. The number of hogs on the farm in June was somewhat lower than in 1933, which year showed a reduction of about 20 per cent from 1932, while an important advance has occurred during the last two years in the amount of bacon exported to Great Britain. The price of lard was somewhat higher in 1934 than in the previous year and averaged 13·6 cents per pound as compared with 12·6 cents in 1933.

The production of eggs during 1934 has been estimated to be somewhat lower than in 1933, and cold storage holdings were also lower month by month than in the preceding year until the autumn when there was an increase in holdings as compared with the corresponding months of 1933. Prices were higher during most of the year than in 1933 but showed about the same seasonal range, declining during the first few months as production increased, and then advancing in the autumn with decreased production. The price of fresh eggs averaged 40·7 cents per dozen in January, 22·3 cents in May and June, and 41·4 cents in December. The average for the year was 31·9 cents per dozen as compared with 28·1 cents in 1933, 29·4 cents in 1932, 33·7 cents in 1931, and 45·7 cents in 1930.

90965—2

The production of creamery butter in Canada during the first eleven months of the year was about 5 per cent greater than in the same period of 1933 and cold storage holdings were also much greater during the last six months of the year than in corresponding months of 1933. Prices were higher during the first half of the year than in 1933 but later declined when supplies became unusually large. The high level for the year for creamery butter was 33 cents per pound in April and the low 24 cents in September. The yearly average price was 27 cents per pound as compared with 25·5 cents in 1933 and 47 cents in 1929. Cheese prices have changed little during the last two years, averaging approximately 20 cents per pound in 1933 and 1934, following the decline throughout the preceding years from an average price in 1929 of 33·4 cents per pound. The price of milk, also, has showed little change but was upward toward the end of 1934 at 10·2 cents per quart in December.

The retail price of flour was higher practically throughout 1934 than in the previous year, influenced by the higher prices prevailing for wheat. The price of bread also averaged slightly higher. The yield of potatoes in 1934 was more than 10 per cent higher than in the preceding year, which had shown a somewhat higher production than in 1932. This situation was reflected in the price in the early autumn of 1934 when the usual seasonal advance with the marketing of the new crop did not occur and considerable decline was recorded before the end of the year. In December, 1934, the price was 72·3 cents per ninety pounds as compared with \$1.22 in August, \$1.06 in December, 1933, and \$1.96 in August, the high point since 1930. Sugar prices were steady during the first four months of the year at about 8 cents per pound but declined later to 6·5 cents per pound by December, influenced in part by the reduction of 1 cent per pound in the excise tax.

The seasonal movement in the price of anthracite coal was somewhat less than in the preceding year but prices were not greatly changed from those of 1933, the average being about \$15.05 per ton for each year. The price of bituminous coal advanced about 20 cents per ton during the year to \$9.43 in December. Rent for workingmen's houses averaged somewhat lower in the spring but decreases were not numerous and those reported were small, while there were a few increases. In the autumn there were several advances and the average showed a slight increase in November.

#### Wholesale Prices in Canada 1934

The accompanying tables, V, VI and VII, show the index number of wholesale prices in Canada calculated by the Dominion Bureau

TABLE II.—COST PER WEEK OF BUDGET OF STAPLE FOODS, FUEL AND LIGHTING AND RENT IN TERMS

The budget is intended to show the changes in the cost of the

†† An allowance for the cost of clothing and sundries would increase the figures by about 50 per cent.

† Kind most sold since October 1922.

of Statistics, the commodities being arranged according to "chief component materials," in table V, according to "purpose," in table VI, and according to "origin," in table VII.

The movement of wholesale prices as indicated by this index was relatively slight in 1934 as compared with that in recent years but was marked by further improvement in many of those commodities which had suffered most from the decline between 1929 and February, 1933, namely primary products. The "all commodities" index advanced about 4 1/2 per cent during January and February, 1934. Part of this gain was lost during the next three months, followed by recovery until

August. At the end of the year the index was 3 per cent above December, 1933. The index for raw and partly manufactured goods advanced from 58.9 in December, 1933, to 64.3 in December, 1934, or 9 per cent, while that for fully and chiefly manufactured goods rose from 72.0 to 72.7 or only 1 per cent in the same period. Consumers' goods were practically unchanged at the end of 1934 from the level of December, 1933, an advance in the food group being offset by declines in clothing and household equipment and supplies. Producers' goods, however, were 5 per cent higher at the end of the year than at the end of 1933, influenced in part by higher prices for

Producers' equipment and building materials but mainly because of higher prices for manufacturers' materials, chiefly for the meat packing and milling industries. In the grouping according to chief component materials, the Vegetable Products group and the Animals and their Products group recorded the greatest advances by the end of the year, the former mainly because of higher prices for grains and milled products and in spite of substantially lower prices in sugar and its products, tobacco and vegetables, and the latter chiefly because of higher prices for livestock. In the Non-Ferrous Metals group antimony and silver were considerably higher, while aluminum, copper, lead, tin and zinc were lower, with the result

that this group was lower at the end of the year. In the Fibres, Textiles and Textile Products group the principal increases were in raw cotton, cotton yarn, knit goods and wool blankets, and the principal declines in silk fabrics, artificial silk products and raw wool. Changes in the other groups, namely Wood, Wood Products and Paper, Iron and its Products, Non-Metallic Minerals and Chemicals and Allied Products were slight.

Table V, on page 9, gives the wholesale prices of certain commodities on primary markets and is compiled from information in the monthly bulletins on "Prices and Price Indexes," issued by the Dominion Bureau of Statistics.

TABLE III.—COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND FOOD

\*Preliminary figures for 1934.

## Prices in Great Britain and Other Countries

The accompanying tables numbered VIII to XXIII give index numbers of retail prices of foods and cost of living and of wholesale prices in several of the principal commercial and industrial countries for 1934 and for preceding dates to show the movements of prices in comparison with those in Canada. The information in the following tables is obtained for the most part from publications of the governmental or other authority compiling the index number, but in some cases from the Monthly Bulletin of Statistics of the League of Nations, Geneva, which bulletin publishes figures for other countries. The monthly bulletin on price indexes issued by the Dominion Bureau of Statistics, Ottawa, also contains index numbers for other countries.

### Great Britain

**COST OF LIVING.**—The index number of the Ministry of Labour (Table X) is "designed to measure the average increase in the cost of maintaining unchanged the pre-war standard of living of the working classes." This index number declined between January and May, rising again between June and the end of the year, and although only 0.7 per cent higher than a year ago, it is at the highest point reached since April, 1932. This index number followed closely the movement of food prices, as among the other groups, a slight advance in clothing offset a slight decline in fuel and light, while rent and sundries were unchanged.

**WHOLESALE PRICES.**—During the year 1934, the general index number of the Board of Trade (Table XI) showed little movement, the difference between the low and high points for the year being only about 3 per cent. Comparing December, 1934, with the same month of 1933, the total index number was 1.6 per cent higher; foods were 4.2 per cent higher due chiefly to an advance of 13 per cent in cereals; non-foods were 0.4 per cent higher due to an advance of 10.7 per cent in cotton and smaller increases in iron and steel, coal and miscellaneous commodities, which were partly offset by declines of 14.3 per cent in wool and smaller declines in "other metals and minerals" and "other textiles".

### France

**COST OF LIVING.**—The index number of the cost of living (Table XII) showed little change during the year. The figure for the third quarter of 1934 was one per cent lower than for the same period last year.

**WHOLESALE PRICES.**—The index number of the General Statistical Office (Table XIII)

declined 11.6 per cent between December, 1933, and December, 1934. In this period, national products declined 14.4 per cent while the decline in imported products was only 4.3 per cent. All groups of commodities were lower in December, 1934, than in the same month in 1933, with the exception of a very slight increase in textiles.

### Germany

**COST OF LIVING.**—The cost of living index number (Table XIV) advanced 1.7 per cent between November, 1933, and November, 1934. During this period, food advanced 2 per cent, clothing 6.7 per cent and sundries 0.1 per cent, while rent and heat and light declined 0.1 and 0.2 per cent respectively.

**WHOLESALE PRICES.**—The index number of the Federal Statistical Office (Table XV) declined in February, March and April, but beginning in May, each month until November showed an increase over the previous month, the index number for November, 1934, being 5 per cent higher than for the same month of 1933. This increase was fairly general, the only exceptions being foods of animal origin, coal, non-ferrous metals, chemicals, artificial fertilizers and technical oils and fats.

### United States

**COST OF LIVING.**—The Bureau of Labour Statistics index number of the cost of living for families of wage earners and lower salaried workers (Table XXII), which is calculated semi-annually on the base 1913=100, advanced 2.9 per cent from December, 1933, to November, 1934. In this period, rent and fuel and light declined, the miscellaneous group was unchanged, while food, clothing and house-furnishing goods advanced.

**WHOLESALE PRICES.**—From the beginning of 1934 until September, the Bureau of Labour Statistics index number showed an increase each month over the preceding month, with the exception of a fractional decrease in April. In October however there was a decrease of over one per cent and this level was maintained in November. Between November, 1933 and November, 1934, an increase of 7.6 per cent is recorded. This increase is due largely to the advances in farm products of 25 per cent and in foods of 17 per cent in this period. Smaller advances were recorded in fuel and lighting materials, metals and metal products, building materials, chemicals and drugs, housefurnishing goods and miscellaneous commodities, while there were decreases in hides and leather products and textile products.

# THE LABOUR GAZETTE

PREPARED AND EDITED BY

THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 35]

FEBRUARY, 1935

[NUMBER 2

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

**I**NDUSTRIAL employment showed its customary seasonal contraction at the beginning of January, 1935, but the losses were decidedly smaller than at the same date in earlier years of the record. The firms furnishing data have laid off some 59,600 workers, on the average, between December 1 and January 1 in the years 1921-1934, while the decrease on the date under review amounted to 40,993, or not quite 69 per cent of the average for the years since 1920. Returns were tabulated by the Dominion Bureau of Statistics from 8,965 employers whose payrolls aggregated 883,185, as compared with 924,178 in the preceding month. The index (average 1926=100) stood at 94.4, compared with 98.9 on December 1 and 88.6 on January 1, 1934. The indexes for the beginning of January in the thirteen preceding years were as follows:—1933, 78.5; 1932, 91.6; 1931, 101.7; 1930, 111.2; 1929, 109.1; 1928, 100.7; 1927, 95.9; 1926, 90.7; 1925, 84.9; 1924, 89.8; 1923, 87.3; 1922, 78.8, and 1921, 88.8. The figures are indicative of conditions in all industries except agriculture, fishing, hunting and highly specialized business.

At the beginning of January, 1935, the percentage of unemployment reported to the Department of Labour by local trade unions throughout Canada was 18.0, contrasted with 17.5 per cent of idleness at the beginning of December, 1934, and with 21.0 per cent at the beginning of January, 1934. The January percentage was based on the reports compiled by the Department of Labour from 1,767 labour organizations, embracing a membership of 161,618 persons.

Reports received from the offices of the Employment Service of Canada for December, 1934, indicated a decline in the volume of business from November and also from the corresponding month a year ago, this comparison being based on the average number of placements effected daily throughout the Service, construction and maintenance recording the heaviest loss under each comparison. Vacancies in December, 1934, numbered

32,165, applications 47,746, and there were 30,513 placements in regular and casual employment.

In retail prices the cost per week of a family budget of staple foods, fuel and lighting and rent at the beginning of January, 1935, was \$15.99 as compared with \$16.02 for December, 1934; \$15.95 for January, 1934; \$22.17 for January, 1930; \$21.96 for January, 1926; \$21.52 for January, 1922; \$26.92 for July, 1920 (the post war peak); and \$14.49 for January, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was 71.5 in January, 1935, as compared with 71.2 in December, 1934; 70.6 for January, 1934; and 63.5 in February, 1933, the low point in recent years. Comparative figures for certain earlier dates are 95.3 for January, 1930; 97.1 for January, 1922; 164.3 for May, 1920 (the post war peak); and 64.9 for January, 1914.

The most recent statistics available reflecting industrial conditions in Canada are given in the table on page 95. The index of the physical volume of business was lower in December, 1934, than in November but higher than in December, 1933. Of the principal factors included those used as indicators of mineral production, manufacturing, construction and imports were considerably lower than in November, while electric power output, trade employment and exports were higher. As compared with December, 1933, all these factors showed improvement with the exception of construction, which was lower in this comparison also. Information available for January, 1935, shows a slight advance in wholesale prices over the preceding month, while employment declined, the decrease, however, being less than normal for the period. Carloadings were practically unchanged as compared with the preceding month and with January, 1934.

Although the number of strikes and lockouts during January showed little change from the previous month, the number of employees involved and the time loss showed substantial increases, due largely to the commencement during January of a strike of coal miners at

Springhill, N.S., in which 1,100 workers were involved with a consequent time loss of 7,700 working days and to two disputes of women's clothing factory workers in Toronto, Ont., involving 3,250 workers and resulting in a combined time loss of 11,000 working days. The number of disputes recorded was 9, involving 4,792 workers with a time loss in man working days of 21,429, as compared with 8 disputes, 340 workers and 1,875 days' time loss in December, and 25 disputes, 5,736 workers and 44,142 days' time loss in January, 1934. The higher figures for the same month a year ago were largely due to two disputes of women's clothing factory workers in Toronto which involved some 3,500 workers for a time loss of 28,500 working days, while three strikes of loggers, etc., in northern Ontario involved 345 workers with a time loss of 3,000 days, and three disputes in Nova Scotia and New Brunswick involved 1,000 coal miners and caused a time loss of 4,000 working days. No disputes were carried over from December but nine disputes commenced during January. Three of these disputes were terminated during the month, one resulting in favour of the workers involved, a compromise settlement being reached in one case, while the result of one was recorded as indefinite. The disputes un-terminated at the end of the month numbered six and involved some 1,500 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected, but which had not been called off or definitely declared terminated by the unions involved.

#### Canada and International Draft Conventions.

The House of Commons, on February 8, agreed to motions made by the Prime Minister, the Right Hon. R. B. Bennett, declaring it expedient that Parliament approve of five Draft Conventions adopted by the general conference of the International Labour Organization of the League of Nations, as follows:—

(1) Draft Convention concerning Seamen's Articles of Agreement, adopted at the 9th convention, June 24, 1926 (LABOUR GAZETTE, July, 1926, page 685).

(2) Draft Convention concerning the Marking of the Weight on Heavy Packages Transported by Vessels, adopted at the 12th session, June 21, 1929 (LABOUR GAZETTE, July, 1929, page 766).

(3) Draft Convention concerning the Protection against Accidents of Workers employed in Loading and Unloading Ships (revised 1932), adopted at the 16th session, April 12, 1932 (LABOUR GAZETTE, May, 1932, page 567).

(4) Draft Convention concerning the Application of the Weekly Rest in Industrial Undertakings adopted on November 17, 1921 (LABOUR GAZETTE, January, 1922, page 53).

(5) Draft Convention limiting the Hours of Work in Industrial Undertakings to Eight in the Day and 48 in the Week, adopted on November 28, 1919 (LABOUR GAZETTE, December, 1919, page 1440).

#### Employment and Social Insurance Bill.

A summary of the Employment and Social Insurance bill introduced by the Prime Minister in the House of Commons on January 29, appears elsewhere in this issue.

In moving the second reading on February 12, Mr. Bennett pointed out that the measure was one of insurance and not of relief—other plans, he said, were being considered for dealing with the relief of those at present unemployed. The scheme would be administered by a commission of representatives of the employers, employees, and the government. There would also be an advisory committee which would be the "watch-dog of the fund"; it would see that the fund was maintained in an effective condition and would be an effective guard against political influence entering into the administration of the fund. In addition there would be local committees to deal directly with employers and employees. The advisory council would probably consist of persons interested in social welfare who were free from political or industrial affiliations.

The number of Canadians who will be eligible for the scheme will be about 1,701,834 the Prime Minister said. All people in Canada will not be insurable under the Act; no Act in any country goes so far as that. The number excluded would be about 864,187 persons, including about 200,000 in farming. The list of exempted occupations was divisible roughly into two parts—those who by reason of their employment are assured of certain benefits (such as civil servants and policemen); and persons whose employment is more or less casual. Where logging is carried on for 12 months in the year a change could be made in the Act to bring bush workers under its provisions. The government would pay the cost of administration, in addition to contributing 20 per cent of the aggregate from the employers and employees. In England the cost of administration was 12½ per cent, and in Canada it would likely be more.

Mr. Bennett gave an account of the evolution of the British unemployment scheme over the years since it came into operation, and changes made in the rates of benefit as a result of experience and changing conditions.

(8) Sugar production given in period of four weeks ending January 26, 1935, December 31 and December 1, 1934; January 27, 1934, December 30 and December 2, 1933.

(7) MacLean's Building Review.

(9) Operating expenses for 1934 include pensions.

Provision for labour exchanges was one of the most important in the bill, Mr. Bennett said. It was intended to make a surplus of labour at one point available when a shortage occurred at another point. The present employment service bureaus were maintained jointly by the provinces and the Dominion. They would be continued and adapted to the new scheme and the continued co-operation of the provinces would be sought.

#### **Decline in unemployment in Canada in 1933 and 1934.**

The following estimate of the number of unemployed persons in Canada in March, 1933, and in December, 1934, prepared by the Dominion Bureau of Statistics, was quoted by the Prime Minister in the House of Commons on January 22:—

"In view of the uncertainty mentioned above an effort was made at the census of 1931 to collect complete information on the matter, as for the date of the census, by securing from every wage earner in the country a statement whether he was or was not working on June 1, 1931, together with the reason for not being at work. On that date approximately 395,000 of the 2,570,000 wage earners of Canada had no job, while 43,000 more were temporarily laid off. This figure of 395,000 gives us a basis for subsequent estimates as to the number of unemployed, though certain observers claim that the 43,000 temporary lay-offs should also be considered as unemployed. On the basis of the combined figure of 438,000 on June 1, 1931, it was estimated in a paper prepared by Professor Jackson and others of the University of Toronto that 726,000 were unemployed in March of 1932. This bureau, however, has always questioned the propriety of the addition of persons temporarily laid off to those with no job, but it was certainly the case that from 600,000 to 650,000 must have been out of employment in March, 1932, and probably 750,000 at the same date of 1933 when employment was about at its low point and when the total number of employees on the staffs of the firms making monthly reports to this bureau fell to about its lowest level at 698,000 on April 1, 1933.

"Since April 1, 1933, the number of employees of reporting firms has been steadily increasing, with slight seasonal exceptions. Between April 1 and December 1 of 1933, 147,000 persons were added to the employees of the firms making monthly reports to the bureau, while between December 1 of 1933 and December 1 of 1934 an additional 75,000 were added, being a total addition of 222,000 to the staffs of reporting firms, some of which was due to the inclusion of additional firms in the records and some to the increase of

employees in the unemployment camps maintained by the Department of National Defence and by certain provincial authorities. After making allowance for these two elements in the situation, it would appear that the number of unemployed wage earners in the country as a whole has been reduced from 750,000 at the worst point of the depression to something like 400,000 at the present time."

#### **Unemployment insurance recommended for farm workers in Great Britain.**

The Unemployment Insurance Statutory Committee established in Great Britain under the provisions of the Unemployment Act, 1934 (LABOUR GAZETTE, August 1934, page 744), presented to the Cabinet in January a unanimous report recommending the inclusion of agricultural workers in the unemployment insurance scheme. This committee, of which Sir William Beveridge is chairman, has authority under the Act to recommend amendments in regard to rates of contributions, rates, conditions and duration of benefit, the waiting period, and continuous unemployment.

The committee place the rate of unemployment among farm workers at not less than 7.5 per cent. The scheme proposed for farm workers differs from the general scheme alike in rates of benefit, length of benefit and rates of contribution. The rates of benefit recommended for agricultural workers are approximately \$3 weekly for each adult male, \$1.60 for his wife, and alternative scales for each child. The first alternative provides 50 cents for each child. The second provides 75 cents for the first child and 60 cents for each additional child, subject to a maximum of \$7.50 weekly.

The benefit rates under the general scheme are \$4.10 weekly for each adult male, \$2.10 for his wife, and 50 cents for each child. Weekly rates of contribution payable by each of the three parties—the employer, the employee and the State—compare as follows: The adult male agricultural worker, eight cents; the adult male worker under the general scheme, 20 cents; the adult female agricultural worker, seven cents; the adult female worker under the general scheme, 18 cents.

Under the scheme recommended by the Committee the initial qualifying condition for benefits would be 20 contributions. Then a claimant, to begin benefits during the year, must have 10 unexhausted contributions to his credit. He is then entitled to two weeks' benefit for the first 10 and one week's benefit for each two unexhausted contributions beyond 10, subject to a maximum of 50 weeks in any one year.

The report proposes a 25 per cent reduction in the contribution in the case of hirings for 12 months and a 12½ per cent reduction in the case of hirings for six months. The committee excludes the family farm and the private gardener from the scheme.

### **Effect of unemployment insurance on wage levels.**

The December issue of the *International Labour Review*, the monthly publication of the International Labour Office at Geneva, presents the results of a study of unemployment insurance as a possible cause of wage fluctuations in Great Britain. The writer points out that in discussions of the effect of wage levels on the level of employment it is often assumed that unemployment benefit tends to maintain wages far above what would otherwise be their natural level. The aim of the article is to examine whether this assumption is a sound one. For this purpose the chief materials used are the course of wages, prices, and unemployment in Great Britain during the last half-century and the development of unemployment insurance in that country; reference is also made to the post-war experience of the United States and Germany. From a study of these materials the author has been able to distinguish between times and ways in which unemployment insurance benefit has tended to hold wages up, or has had little effect, or sometimes, as a result of its cost to the employers, has even encouraged their fall. The main conclusion reached is that positive assertions as to the effect of unemployment benefit on the maintenance of wage levels are not warranted by any ascertainable facts.

### **Inquiry into employment of orientals on Canadian ships.**

The House of Commons, on January 28, adopted a resolution referring to the Standing Committee on Industrial Relations the problem arising out of the employment on Canadian ships of large numbers of orientals. The resolution, as originally moved by Mr. Thomas Reid (New Westminster), asked the government to "take such steps as will provide for employment of greater numbers of white Canadian citizens on all ships and vessels of Canadian ownership and registry, the owners of which receive grants of money from the public treasury of Canada." On the suggestion of the Hon. R. J. Manion, Minister of Railways and Canals, the resolution was, with Mr. Reid's consent, amended to provide for the reference of the question to the Standing Committee. The resolution stated the following facts as a proper subject for investigation:

Great numbers of Canadian seamen on the Pacific coast of British Columbia are out of employment and in many cases destitute;

Owners of ships and vessels of Canadian registry on the Pacific coast of British Columbia give employment in large measure to seamen, cooks and engineers of oriental origin;

Other countries give greater consideration to the employment of their own nationals on ships and vessels belonging to their own country;

The Canadian government grants large sums of money to the owners of ships and vessels by way of subsidies;

It is desirable that every encouragement be given for the employment of officers, seamen, cooks and engineers of white Canadian citizenship in preference to those of oriental origin on all Canadian owned and registered ships and vessels.

### **Conference to be held on Public Health in Canada.**

Speaking in the House of Commons on January 24, on a motion by Mr. H. E. Spencer (Battle River), asking the federal government to adopt a definite health policy which could be carried on in co-operation with the provincial governments, the Hon. D. M. Sutherland, Minister of Pensions and National Health, expressed his sympathy with the purpose of the motion, stating that he would do all in his power as Minister of Health to further the policy of co-operation. He referred to the plan now under consideration by the provincial organizations of the Canadian Medical Association, which was outlined in the *LABOUR GAZETTE*, December, 1934, page 1098. "The comments and suggestions which the individual doctors make," he said, "will come back through the provincial bodies to the Canadian Medical Association, and from their replies and the original plan it will be possible for the association to evolve some plan which they can recommend to some government. It does seem to me that until that plan is evolved and ready to be presented to a government, steps should not be taken in the matter, because there is no use going into a thing of this kind at random and without seeing just where you are going."

The Minister outlined the recent development of medical science in the prevention, diagnosis and treatment of disease, which had resulted in a marked improvement in public health. He also described the valuable work done by provincial, municipal, and voluntary organizations in the same direction. He concluded with the following announcement: "It is my purpose to invite at some mutually convenient time within the next two or three months the ministers of health of the various

provinces to come to Ottawa and discuss with me their problems, with the idea, just as the hon. member for Battle River suggests, of furthering co-operation between the federal and provincial bodies, because I am firmly convinced that any advances that are to be made will be made only along the lines of that co-operation. In extending that invitation to the provincial ministers of health I am in hopes that much good will come of our meeting."

The House agreed to the motion on January 31.

### **Benefits of community health units.**

The benefits of local health units were described by the Minister of Pensions and National Health in the course of the address quoted

in the preceding note, as follows:—

"In a general way the object of a health unit is to extend public health activities to rural districts, so that they really have a clinic available to them to give advice on medical subjects, principally in the preventive sphere. They educate the public with regard to the best methods of preventing disease. As they move about the homes they see improvements that might be made, perhaps in connection with drainage or something along that line, and they also have to do with the children both of the pre-school and the school age. They visit the schools and examine conditions there; they also examine the younger children and give advice to the parents as to what might be done for the children. Another important function of the health clinic is the education of mothers, both before children are born and in the post-natal period, as to the care that should be exercised. That work, in certain parts of the country, has had wonderful results. Probably the province of Quebec has made greater advances in connection with health units than have been made in any other part of the country, and I think that province is to be congratulated on the way it has supported the movement and on the benefits that have accrued from it. Those associated with these health units also carry on a campaign against the various contagious diseases and, in co-operation with the doctors of the community, epidemics can be stamped out much more quickly than was possible in the past."

In regard to the service rendered to the sick throughout Canada by the Victorian Order of Nurses the Minister said: "I think perhaps from a doctor's standpoint the Victorian Order of Nurses does more good and is of more actual benefit to the sick people than any other similar institution in the country. Per-

sonally I regard that body as doing very excellent work throughout the country."

### **Committee to investigate youth problems in Toronto.**

Early in February Mayor James Simpson held a conference of various bodies interested in the welfare of youth, to consider the urgent problems arising out of the situation of the large numbers of unemployed young people in Toronto. At the close of the conference the Mayor announced that two committees would be formed to make special efforts "to rehabilitate the lost generation." The main committee, the members of which are to be nominated by the Mayor, will seek to place young persons in employment. This body, in turn, will nominate a sub-committee which will look after the recreation and general welfare of youth.

"I know conditions are deplorable," Mayor Simpson said. "There are several thousands of young men and young women who have nowhere to turn, and the plight of some of these, whose parents are already on relief, is very serious. To the average intelligent adult there is only one deduction—that, from a moral point of view, aside from economics, such a state cannot help but prove disastrous to the individual and the community. If the average man or woman would do a little hear-searching they would realize the evils that can arise if the problem is not dealt with."

The Mayor stated he would go over the list of those who attended the conference, and from it, supplemented possibly from outside sources, he would choose the committee which will investigate and report on conditions among Toronto youth and remedies for their troubles. It would be, he said, a committee similar in set-up and function to that of the Lieutenant-Governor on Housing (LABOUR GAZETTE, November, 1934, page 1008).

### **Progress of co-operation in Nova Scotia.**

The work of St. Francis Xavier University, Antigonish, in promoting co-operation in Nova Scotia is outlined in an article by the Rev. Dr. M. M. Coady, of the Extension Division, which appears in the January issue of *Consumers' Cooperation*, the organ of the Consumer's Co-operation purchasing movement in the United States. The college is endeavouring to spread the knowledge of co-operative principles among the farmers, miners, fishermen and other workers in the provinces. Group action by the people, it is stated, is advocated in "the four possible fields open to them," as follows:—

"(a) The consumers' cooperative society, or the so-called co-operative store, is gaining great ground. Already 18 such societies are functioning in eastern Nova Scotia alone, and some of them are among the most successful on the North American continent.

"(b) The field of finance opens up great possibilities for the common people. Those who control money and credit in the nation control most other things too. After a little less than two years of activity we have succeeded in establishing among very poor people 27 credit unions, and the total money controlled by these little groups to date is \$90,000. It may well be that this means of taking care of their own credit needs is the foundation for other activities that will result in the reconstruction of society.

"(c) Already in Nova Scotia many plants such as processing and manufacturing plants are owned and operated by the primary producers. This idea can be extended among labourers. In England the co-operative movement now operates 150 manufacturing plants. There is the germ here of an ordered society where production is for use and an ascertained need.

"(d) Primary producers of all kinds can get further control of their own business by organizing for marketing purposes. Not only is group action absolutely necessary in this field for greater economic returns, but it is impossible for small producers in any other way to have volume of quality and standard goods without it. A large part of our people are small farmers and fishermen, and their success will be determined in great measure by the growth of this movement. We are promoting a great variety of organizations in this field."

#### **Consumers' interest in recovery measures in United States.**

The Consumers' Advisory Board recently presented a report to the United States National Recovery Administration containing recommendations for the revision of the National

Industrial Recovery Act. "The consumer's interest," the report states, "requires that goods be turned out in large and increasing volume, that living standards may be advanced to the highest level to which our productive capacity and our technical skill can raise them. Competition which contributes to this end must be encouraged; prices kept low. There must be maintained in the industrial system a degree of flexibility which will permit the low-cost to displace the high-cost plant, the more efficient producer to supersede his less efficient competitor. The door must be kept open to new products and processes, to new blood and

new ideas. The evidence is conclusive that the people of the United States do not have and never have had an average standard of living high enough to justify complacent acquiescence in any program which restricts production. Thousands are improperly fed, badly housed, inadequately clothed. Nearly all of us could increase our consumption of goods and service without over-indulgence. In such a situation it is fantastic to talk of overproduction. There has been over-capacity only in the sense that industry had produced more than it can sell at high prices. If prices are not so high as to prevent it, idle labour and capacity will be put to work and the so-called surpluses of the goods of which our people stand in desperate need will shortly disappear."

The committee makes the following recommendations: (1) that the government retain the right to impose codes of fair competition as a measure of industrial control; (2) that the vast majority of these codes be confined to the establishment of simple minimum standards governing hours, wages, child labour, collective bargaining and fair trade practices; (3) that there be added to these standards comparable quality standards for the protection of the consumers; (4) that definite limits be set on such price and quantity controls as may be permitted to code authorities in exceptional cases; (5) that public membership on code authorities be made proportionate to the powers which they exercise; (6) that the tariff section of the Act be repealed; and (7) that provision be made for the collection of complete industrial statistics.

#### **International inquiry into the textile industry.**

The International Labour Conference, at its 11th session in 1928, adopted a resolution, proposed by the Japanese Workers' delegate, requesting the International Labour Office to "consider the possibility of undertaking an investigation as early as possible into the conditions of work of men, women, and children employed, including wages, hours of work, hygienic conditions, and other conditions affecting their employment, in the textile industries of the various countries of the world." (LABOUR GAZETTE, July, 1928, page 759.)

In pursuance of this resolution, the Governing Body, at its Forty-second Session in October, 1928, decided to set up a Committee on Conditions of work in the Textile Industry, which prepared a draft questionnaire to be sent to the Governments concerned with a view to obtaining information on hours of work and wages in the two principal branches of the industry, cotton and wool, which employ from two-thirds (France) to nine-tenths

(United States) of all the workers in the textile industry.

The Governing Body decided that before the enquiry was undertaken the Governments concerned should be consulted so as to make sure of obtaining their fullest collaboration. These consultations are still in progress, and the Governing Body has therefore not yet authorized the enquiry.

In the meantime the *International Labour Review* (Geneva), December, 1934, publishes the results of a survey of regulation hours of work in the cotton and wool industries, and for the principal producing countries, this survey being based on information drawn from social legislation, collective agreements, special studies and the press. It is pointed out that the fundamental usefulness of the products of the textile industry, the amount of capital invested in it, and the large number of workers it employs make it one of the most important of all industries. Taking only the manufacturing operations connected with spinning, weaving, and finishing, the number of persons employed forms from 8 to 20 per cent of the total industrial population in the great industrial countries (Italy, the United States, Germany Switzerland, France, Japan, Great Britain, Czechoslovakia, Belgium, Poland).

"Textile firms," the *Review* states elsewhere, "are engaged in a race for markets in a world where production exceeds possible consumption. The result is that each competitor seeks to reduce to a minimum his costs of production, which are determined partly by the quality of his equipment and the degree of organization of the undertaking, and partly by the conditions of employment. The cost of labour necessarily plays a part in determining the costs of production, varying as it does approximately from one-sixth to one-quarter of the total. In the United States, wages represent 27.3 per cent of the cost of production for cotton and wool and 22 per cent for woollen yarn. In Great Britain the proportion for cotton yarn is 13 to 18 per cent, and for weaving it is 18 to 22 per cent. Hours of work are consequently among the factors affecting the competitive power of undertakings."

#### **Social security program in United States.**

On January 17 President Roosevelt transmitted to Congress his program of social security, recommending the adoption of legislation to provide as follows:

(1). Immediate protection of the needy aged (above 65) through free State pensions, of not to exceed \$30 a month, financed on a

fifty-fifty basis by the States and the government;

(2). A national system of compulsory contributory old age insurance, financed in equal payments by employers and employees without governmental financial participation;

(3). A system of voluntary old-age annuities, bought directly from the government, for those in higher income groups;

(4). A system of unemployment insurance, financed by a 3 per cent tax on payrolls imposed by the government with credits up to 90 per cent to employers contributing to similar plans in the States;

(5). Federal grants to States for assisting widows and children and for the protection of public health (not health insurance);

(6). Supervision of the insurance (old age and unemployment) systems by a social insurance board in the Labour Department; supervision of direct benefits to the aged and other dependants by the Federal Relief Administration; supervision of the health benefits by the Public Health Service.

The President estimated that it would require about \$100,000,000 from the Federal Treasury to institute the social security plan. This would be divided among the various activities, part to go as a subsidy for free pension awards, part to encourage adequate State administration of unemployment insurance laws; part as a Federal subsidy for aid to dependent mothers and children, part for maternal and child health, part for a similar subsidy for benefits to crippled children, and for other purposes of public health. He gave assurance that the Federal subsidies were needed only for initiating the system. One of the guiding principles of the whole plan, particularly relating to unemployment and old age insurance, he said, was that it should be self-sustaining "in the sense that funds for the payment of insurance benefits should not come from the proceeds of general taxation."

A proposal submitted to the House of Commons on January 30, by Mr. I. D. Cotnam (North Renfrew), that the provisions of the Old Age Pensions Act should apply to blind people over 40 years of age, was, on motion of the Minister of Labour, referred to the Standing Committee on Industrial and International Relations.

The Winnipeg City Council, on January 28, passed by the casting vote of the acting Mayor, a resolution recommending that the Dominion Government provide a system of non-contributory unemployment insurance out of a fund to be raised by means of a special graduated federal income tax.

## PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING THE MONTH OF JANUARY

**A**N application for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act was received in the Department of Labour on January 11 from certain shopmen employed by the Canadian National Railways at Winnipeg, being members of the Fort Rouge

Railroad Workers' Unit, One Big Union. The dispute involves seniority rights, the applicants claiming that the employer re-employed junior machinists while senior machinists were available. The matter has been taken up with the officials of the railway in Montreal.

### STRIKES AND LOCKOUTS IN CANADA DURING JANUARY, 1935

**T**HE following table shows the number of disputes, workers involved and time loss for January, 1935, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Jan. 1935....	9	4,792	21,429
Dec. 1934....	8	340	1,875
Jan. 1934...	25	5,736	44,142

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time is frequently not received until some time after its commencement.

The number of disputes recorded for January was one more than that for December, 1934, but the number of workers involved as well as the time loss incurred showed a substantial increase over that for the previous month during which no disputes involving large numbers of workers were reported. The higher figures for the latter items were due to the commencement during January of a strike of coal miners at Springhill, N.S., in which 1,100 workers were involved resulting in a time loss of 7,700 working days, and to two disputes of women's clothing factory workers in Toronto, Ont., involving some 3,250 workers and resulting in time loss of 11,000 working days. As compared with the same

month a year ago, however, a steep decline is recorded, the higher figures for January, 1934, being due chiefly to two strikes of women's clothing factory workers in Toronto in which some 3,500 workers were involved, with a time loss of 28,500 working days, while three disputes of loggers, etc., in northern Ontario involved 345 workers with a time loss of 3,000 days and three strikes in Nova Scotia and New Brunswick involved some 1,000 coal miners and caused a time loss of 4,000 working days.

No disputes were carried over from December, but nine disputes commenced during January, of which three terminated during the month, one resulting in favour of the workers involved, a compromise settlement being reached in one case, while the result of a third was recorded as indefinite. At the end of January, therefore, there were six disputes in progress recorded as strikes or lockouts, namely: coal miners, Corbin, B.C., coal miners, Springhill, N.S., bakery employees, Toronto, Ont., shoe factory workers, Montreal, Ont., cloak and suit factory workers, Toronto, Ont., and compositors, Calgary, Alta.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not declared terminated. Information is available as to five such disputes, namely: photo engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., May 4, 1931, one employer; motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; moulders, Peterborough, Ont., February 27, 1934, one employer; shoe factory workers, Preston, Ont., September 13, 1934, one employer; and compositors, London, Ont., March 1, 1934, one employer, this last being added this month. The dispute involving loggers employed by one firm at Port Alberni, B.C., commencing October 10, 1934, and carried in the above list for some time is reported to have been called off by the

union on December 6, 1934, and has consequently been removed from the list.

Disputes involving men on unemployment relief work, who are not paid wages but receive subsistence for which work is performed or may be required, are not included in the record, no relation of employer and employee being involved.

A strike in an establishment in Hamilton, Ont., engaged in the manufacture of leather jackets, on January 23, has been reported in the press, the establishment being closed down indefinitely, but particulars have not yet been received.

The following paragraphs give particulars regarding certain disputes in addition to the information in the tabular statement.

COMPOSITORS, LONDON, ONT.—The dispute involving sixty-four members of the International

Typographical Union and two daily newspapers in London, Ont., which commenced on March 1, 1934, the employers having refused to negotiate and sign a renewal of the union agreement, is recorded as terminated, the strikers having been replaced from time to time. The dispute has been added to the list in a previous paragraph of those in which employment conditions are no longer affected but which have not been called off or definitely terminated by the unions involved.

COAL MINERS, PORT HOOD, N.S.—Some fifty coal miners employed in one colliery at Port Hood, N.S., ceased work on January 21 in connection with a dispute as to the non-payment of wages due since November, 1934, a change in management being demanded. A clash between the miners and the management on January 21 was reported to have resulted in police inter-

### STRIKES AND LOCKOUTS IN CANADA DURING JANUARY, 1935\*

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
<b>(a) Strikes and Lockouts in Progress prior to January, 1935</b>			
MANUFACTURING— <i>Printing and Publishing—</i> Compositors, London, Ont.....			Commenced Mar. 1, 1934; for renewal of union agreement; working conditions no longer affected by December 1934; in favour of employer.
<b>(b) Strikes and Lockouts Commencing during January, 1935</b>			
MINING, ETC.— Coal miners, Port Hood, N.S....	50	200	Commenced Jan. 21, 1935; for payment of wages due and change in management; terminated Jan. 24, 1935; indefinite.
Coal miners, Corbin, B.C.....	220	2,200	Commenced Jan. 21, 1935; against dismissal of worker and for certain changes in conditions; untermiated.
Coal miners, Springhill, N.S....	1,100	7,700	Commenced Jan. 24, 1935; for dismissal of twelve members of a dual union; untermiated.
MANUFACTURING— <i>Vegetable Foods—</i> Bakery employees, Toronto, Ont.	14	364	Commenced Jan. 2, 1935; against discharge of worker; untermiated.
<i>Boots and Shoes—</i> Shoe factory workers, Montreal, P.Q.	118	700	Commenced Jan. 24, 1935; for increased wages; untermiated.
<i>Textiles, Clothing, etc.—</i> Women's clothing factory workers (cloakmakers), Winnipeg, Man.	20	90	Commenced Jan. 16, 1935; alleged discrimination against union members and violation of agreement; terminated Jan. 21, 1935; compromise.
Women's clothing factory workers (dressmakers), Toronto Ont.	1,450	5,000	Commenced Jan. 18, 1935, for increased wages, reduced hours, and improved conditions; terminated by Jan. 31, 1935; in favour of workers.
Women's clothing factory workers (cloaks and suits), Toronto, Ont.	1,800	5,000	Commenced Jan. 24, 1935; for renewal of union agreement with provision for reduced hours, abolition of overtime and an unemployment fund; untermiated.
<i>Printing—</i> Compositors, Calgary, Alta...	20	175	Commenced Jan. 10, 1935; against decrease in wages untermiated.

\*In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which working time was lost to an appreciable extent.

vention. On January 24, however, a settlement was reached under which operations were resumed pending a settlement of the wage dispute.

**COAL MINERS, CORBIN, B.C.**—Commencing on January 21, 1935, in the colliery of one company at Corbin, B.C., this dispute involved some 220 coal miners demanding the reinstatement of a discharged miner, also that more men be employed to repair miners' dwellings, that more work should be provided and certain other changes. The maintenance men were withdrawn and the engines and pumps were manned by officials. At the end of January the dispute was unternminated but early in February the western representative of the Department went to Corbin to bring about negotiations for a settlement.

**COAL MINERS, SPRINGHILL, N.S.**—A large number of the employees of one mining company, members of the United Mine Workers of America, ceased work on January 24 refusing to work with twelve miners, officials of the Amalgamated Mine Workers of Nova Scotia. As a result of clashes between adherents of the two unions five miners were arrested on charges of assault on January 28. The collieries have been operated since 1919 under agreements with the United Mine Workers of America and in November applications for the collection of union dues by the employer from each miner's pay, in accordance with an amendment to the Coal Mines Act, showed a majority in favour of this union. Early in February as a result of a conference of the provincial Minister of Mines and Labour, the Deputy Minister of Labour, the mine management and the union officials work was resumed, the miners objected to having applied for membership in the United Mine Workers of America.

**BAKERY EMPLOYEES, TORONTO, ONT.**—A number of the employees in one bakery establishment were called out on strike on December 31, 1934, by the Food Workers' Industrial Union in protest against the discharge of a driver. The proprietor, having an agreement with the union, to be in effect until April, 1935, asked the union to send another driver but after discussion with union representatives a strike was called. The proprietor closed down as a result of attacks on drivers and property damage but resumed operations later. In connection with a mass picketing demonstration one man was arrested on a charge of obstructing the police.

**SHOE FACTORY WORKERS, MONTREAL, P.Q.**—A number of employees in one establishment ceased work on January 24, demanding increases in wage rates to the minimum rates specified in an agreement between the National Catholic Shoe Workers Syndicate and the Shoe

Manufacturers Association, made applicable to all shoe factories in the province under the terms of the Quebec Collective Labour Agreements Extension Act by an Order in Council (LABOUR GAZETTE, Sept. 1934, p. 825). The employer was not a member of the Manufacturers' association but stated the wages paid were in accordance with the agreement. The union is reported to have requested the provincial authorities to investigate. At the end of the month the dispute had not been settled but it was reported that some of the strikers had resumed work and that some had been replaced.

**WOMEN'S CLOTHING FACTORY WORKERS (CLOAKMAKERS), WINNIPEG, MAN.**—A number of employees of one cloak manufacturing firm in Winnipeg, Man., ceased work on January 16 when employment was refused to four members of the union. The management had signed an agreement to be in effect until July 20, 1935, with the Industrial Union of Needle Trades Workers following a strike in July, 1934. It was reported that when the plant was re-opened after a month's shut down sub-contractors of the firm did not wish to employ four of the union members, the union claiming this was a lockout of union employees and an attempt to break the agreement. As a result of negotiations work was resumed on January 22, the employer having agreed to employ none but former employees until all had been absorbed and to comply with the agreement.

**WOMEN'S CLOTHING FACTORY WORKERS (DRESSMAKERS), TORONTO, ONT.**—Commencing in one establishment about January 18 when members of the Industrial Union of Needle Trades Workers ceased work to enforce a demand for increased wages, reduced hours and improved conditions, by January 23 this dispute involved some sixty-five firms and some 1,450 workers. Negotiations resulted in the resumption of work from time to time as individual agreements were reached with the various firms involved and by January 31 settlements conceding substantially the demands of the union had been reached in all cases. Agreements with some seventy establishments reached in January, 1934, following a strike from January 17 to January 22, 1934, had expired on January 20, 1935, being renewed by those firms which did not become involved in the strike (LABOUR GAZETTE, February, 1934, page 193).

**WOMEN'S CLOTHING FACTORY WORKERS (CLOAKS & SUITS), TORONTO, ONT.**—On the expiration of the agreement between the International Ladies' Garment Workers' Union and the Toronto Cloak Manufacturers' Association and certain independent employers on January 25, a new agreement was reached, but as certain independent employers had refused to accept it

a cessation of work in all factories was ordered from January 24 to January 26. During the days following a number of other employers signed the agreement and at the end of the month only a small number of workers were reported to be involved. The agreement is for two years and provides for the forty hour week instead of forty-four after July 1, 1935, and for no overtime until all workers are employed and also for certain wage adjustments. A number of persons were arrested in connection with picketing.

COMPOSITORS, CALGARY, ALTA.—Compositors employed in one daily newspaper establishment

in Calgary, Alta., ceased work on January 10 as a result of a reduction in wages. The wages had been those under agreement between the International Typographical Union and daily newspaper publishers in Calgary and other cities in Alberta to be in effect until May 15, 1935. The employer stated that it was not possible to continue to pay these rates and proposed a reduction in all departments, the compositors to be reduced ten cents per hour but to receive fifty per cent of any profits. Negotiations between representatives of the union and the management did not result in a settlement of the dispute or reference to arbitration.

## RECENT STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month. The annual review containing a table summarizing the principal statistics as to strikes and lockouts in other countries is on page 105 of this issue. Information as to particular disputes is obtained for the most part from newspaper reports.

### Great Britain

Preliminary figures for the year 1934 show 472 disputes beginning in the year, involving 134,000 workers with a time loss of 959,000 working days for the year. The industries showing the greatest time loss from industrial disputes during the year were coal mining, construction and "iron and steel and other metal."

Of the 472 disputes beginning in the year, 80 were over demands for advances in wages, 49 over proposed wage reductions, 100 over other wage questions, 19 over questions relating to hours, 121 over questions respecting the employment of particular classes or persons, 62 over questions of working arrangements, 36 over questions of trade union principle, 3 were due to sympathetic action and two were due to other causes.

The number of disputes beginning in December was 28 and 14 were still in progress from the previous month, making a total of 42 disputes in progress during the month, involving 16,000 workers with a time loss of 85,000 working days for the month. Of the 28 disputes beginning in the month, 4 were over demands for increases in wages, 9 over other wage questions, 2 over questions of working hours, 4 over questions respecting the employment of particular classes or persons, 3 over working arrangements, 3 over trade union principle and 3 were due to sympathetic action. During December settlements were

reached in 28 disputes, of which 5 were in favour of workers, 12 in favour of employers and 11 resulted in compromises; in two other disputes, work was resumed pending negotiations.

Coal miners at one colliery at South Shields who went on strike in September, were joined on December 31 by 3,000 other coal miners employed by the same firm. The dispute terminated January 4, 1935, when the strikers were successful in securing their demand regarding the employment of deputies as day wage men and also in the extension to this colliery of the bonus system of payment. Another coal mining dispute involving 1,630 miners near Dalkeith began December 19 for an increase in wages for certain classes of workers.

### Mexico

It is reported that 24,000 employees of oil companies in Tampico went on strike January 24.

### United States

The number of disputes beginning in October was 131, and 109,000 workers were involved during this month, with a time loss of 1,595,000 working days.

A strike of 3,000 workers at a biscuit plant in New York City began January 8 in sympathy with a strike of the same company's employees in Philadelphia for equalization of pay for similar work and on account of alleged discrimination against union members.

The Quebec Legislature, voting on an amendment to a motion to enact agreeing legislation in regard to the Dominion Old Age Pensions Act, decided by a majority of 40-12 to take no action "before the new legislation respecting the Federal Old Age Pensions Act, as announced by the Prime Minister of Canada, is submitted and passed by the Canadian House of Commons."

## STRIKES AND LOCKOUTS IN CANADA AND IN OTHER COUNTRIES DURING THE YEAR 1934

THE number of disputes during 1934 and the number of workers involved showed considerable increases over the figures since 1921, while the time loss was the greatest since 1925. The industries chiefly affected were logging, mining and clothing manufacturing, but there was considerable time loss in furniture manufacturing and woodworking, as well as in boot and shoe manufacturing. Four strikes of clothing factory workers in Toronto, Ont., three in Montreal, P.Q., and one in Winnipeg, Man., accounted for about one-third of the time loss during the year. A strike of loggers in Vancouver Island resulted in nearly one-third of the total time loss and two strikes of pulpwood cutters in northern Ontario caused considerable time loss. There were numerous strikes of coal miners, includ-

ing one with considerable time loss at Stelarton, N.S., one at Minto, N.B., and one at Cumberland in Vancouver Island, B.C., and two strikes of metal miners, that at Flin Flon, Man., causing considerable time loss. Most of these disputes arose from demands for increased wages, in some cases also for union recognition or union working conditions. Only ten of the 191 disputes during the year were caused by wage reductions.

The accompanying table of strikes and lockouts in Canada from 1901 to 1934, inclusive, gives figures as to all disputes, as to coal mining separately, and for those in industries other than coal mining. For many of the years the figures for coal mining account for very large percentages of the numbers of employees involved and of the time loss in-

TABLE I.—STRIKES AND LOCKOUTS IN CANADA BY YEARS, 1901-1934

Year	Number of disputes beginning during the year	Disputes in existence during year									
		All Industries				Coal Mining			Industries other than Coal Mining		
		Number of disputes	Number of employers	Number of workers involved	Time loss in man-working days	Number of disputes	Number of workers involved	Time loss in man-working days	Number of disputes	Number of workers involved	Time loss in man-working days
1901.....	97	99	285	24,089	737,808	2	1,760	7,040	97	22,329	730,768

Total.....	4,244	*4,371	*23,030	*1,088,989	24,217,049	*479	*291,306	9,244,179	*3,894	*797,683	14,972,870

\*In these totals figures for disputes extending over the end of a year are counted more than once.

curred. It will be observed that since 1925 the figures for coal mines have been comparatively small.

### Compilation of Statistics

Since its establishment toward the end of 1900 the Department of Labour has maintained a record of strikes and lockouts in Canada, publishing in the *LABOUR GAZETTE* each month a complete list of those in progress, so far as available, with particulars as to the nature and result of each dispute. Early in each year a review of the previous year has been given, including statistical tables analysing the data, and since 1912 including a complete list of the disputes on record during the year. As the monthly statements in the *LABOUR GAZETTE* are necessarily of a preliminary nature the annual review constitutes the revised record for the year. A special report on "Strikes and Lockouts in Canada 1901 to 1912," issued in 1913, contained a complete list of strikes and lockouts for that period with analytical tables. The annual reviews in the *LABOUR GAZETTE* have brought the lists of disputes and analytical tables down to date each year.

The annual review for 1930 appearing in the *LABOUR GAZETTE*, February, 1931, included summary tables back to 1901, the result of a revision of the record on the basis of the classification of industries adopted by the Dominion Bureau of Statistics and other government departments for official statistics. This classification had been used for strikes and lockouts since 1921, and it was advisable to have the record for earlier years on the same basis. Other revisions to secure uniformity throughout the whole period were also made.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical tables, therefore, strikes and lockouts are recorded together, the term dispute being used with reference to either.

A strike or lockout included as such in the records of the Department, is a cessation of work involving six or more employees and lasting one working day or more. Disputes of less than one day's duration and disputes involving less than six employees have not been included in the published record unless a time loss of 10 days' or more is caused. A separate record of such disputes involving less than 10 days' time loss is maintained in the Department. Although not included in the statistical record, such disputes are mentioned in the *LABOUR GAZETTE* at the time of their

occurrence. During 1934 there were 21 such disputes, involving 359 employees, making a time loss of 114 working days.

The figures in this report are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. As to duration of strikes, numbers of employees concerned, etc., it is impossible always to secure exact information, but the estimate made in such cases is the result of painstaking methods in the collection of data, and with increasing experience in dealing with the subject it is believed that the statistics indicate the conditions with reasonable precision. The estimate of time loss is reached by multiplying the number of working days during which each strike lasted by the number of employees directly involved in the dispute from time to time so far as known. The number of employees recorded for each dispute is the number of those directly involved, that is on strike or locked out, and does not include those indirectly affected. The figures in the tables as to workers are therefore the number of those directly involved. In recent years, when the information is available, the number indirectly affected has been shown in footnotes to Table X.

The statistical tables do not include minor disputes as described in a previous paragraph, nor disputes (previously recorded) as to which information has been received indicating that employment conditions are no longer affected, but which the unions or organizations concerned have not yet declared terminated.

Information is available as to the following disputes of this nature which were carried over from 1933 but were called off or lapsed during 1934: lithographers, Toronto, Ont., commenced April 15, 1932, one employer, lapsed by end of September, 1934; and compositors, Winnipeg, Man., commenced March 13, 1933, one employer, terminated February 12, 1934.

The following disputes of the same nature were still on record at the end of 1934; photo engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., commenced May 4, 1931, one employer; motion picture projectionists, Toronto, Ont., commenced July 9, 1932, two employers; moulders, Peterborough, Ont., February 27, 1934, one employer; compositors, London, Ont., commenced March 1, 1934, one employer; and shoe factory workers, Preston, Ont., commenced September 13, 1934, one employer.

LOSS IN WORKING DAYS THROUGH STRIKES AND LOCKOUTS BY GROUPS OF INDUSTRIES EACH YEAR 1901-1934

EMPLOYEES INVOLVED EACH YEAR 1901-1934

NUMBER OF  
EMPLOYEES

### Charts

The accompanying chart of the time loss in working days by groups of industries for each year back to 1901, shows that in Mining considerable time loss occurred in 1909, 1910, 1911 and 1913, and again in 1917, 1922, 1924 and 1925, while in 1932 and again in 1934, time loss was greater than since 1925. In 1919 the time loss due to general strikes is shown separately.

In Metal Manufacturing considerable time loss appeared in 1919 and 1920. In Construction considerable time loss appeared only in 1912 and 1919. In Transportation, etc., there was considerable time loss only in 1901, due to a strike of trackmen; in 1903 due to a strike of railway clerks and freight handlers throughout western Canada, and a strike of longshoremen at Montreal, with a sympathetic strike of teamsters; and in 1908, due to a strike of railway shop machinists. There also occurred considerable time loss in Clothing, etc. (including textiles, furs, boots and shoes, leather, etc.) in 1903, 1908, 1912, 1914, 1917, 1919, 1925 and 1926, with an appreciable amount in 1930, 1931, 1932, 1933 and 1934. The time loss in Other Manufacturing was large in 1901, due to a lock-out of cigarmakers at Montreal; and in 1921, 1922, 1923 and 1924, due to the prolonged disputes of job printers to secure the forty-four hour week. In 1931 and 1932 a number of disputes in sawmills caused appreciable time loss. Logging, included under Other Industries, showed considerable time loss in 1933 and 1934, as in 1919, 1920, 1928 and 1929.

From the chart showing results of the disputes it appears that the majority of employees were successful or partially successful in 1901, 1902, 1907, 1915, 1916, 1917, 1918, 1926, 1930, 1931, 1932, 1933 and 1934, but were unsuccessful in 1908, 1921 and 1923. In 1919, a large percentage of the workers who were unsuccessful were involved in the general strike at Winnipeg and in general strikes in other localities in sympathy with it.

### Review of Disputes by Industries, 1934

**AGRICULTURE.**—The only strike in this industry was one involving hop workers in British Columbia, only one day being lost although the dispute was not settled for over a week during which rain prevented work. A similar dispute in this area in 1933 was the only other dispute in agriculture reported in recent years.

**LOGGING.**—As in 1933, there was a comparatively large number of disputes, some of these involving large numbers of workers in some cases for considerable periods of time, so that

the time loss in this industry was one-third of the total for the year. The most important of the disputes was in Vancouver Island involving over two thousand workers from January to May although in some camps the employees were out for only part of this time. The employers had made some wage increases and a minimum scale set by the provincial authorities in May under the Male Minimum Wage Act, 1934, raising the rates paid to the lower paid workers led to the termination of this dispute. Two disputes in Northern Ontario in the Kapuskasing and Sault Ste. Marie districts for increased wages, improved conditions and recognition of camp committees in September and October terminated in favour of the employers. Wages in Northern Ontario districts had been increased appreciably as a result of strikes in 1933.

**FISHING AND TRAPPING.**—The only strike was one of salmon fishermen in Vancouver Island for a few days in May, demanding an increase in piece rates, being unsuccessful.

**MINING, ETC.**—The 28 disputes in this industry included 26 strikes of coal miners and two of metal miners. The latter involved over one thousand miners at Flin Flon, Man., from June 11 to July 14, demanding the restoration of a wage scale reduced some time previously, the eight hour day and recognition of the Mine Workers' Union of Canada. A similar dispute occurred at Noranda, P.Q., but only a small number of the employees ceased work and these were replaced within a few days. The most important of the coal mining disputes was at Stellarton in Pictou County, N.S., involving 1,300 miners from the end of February to the middle of May, resisting a reduction in wages. A compromise was effected through the intervention of the provincial authorities. A strike of coal miners at Cumberland, Vancouver Island, to secure increased wages, involved over 400 miners for two weeks in November, the miners securing some concessions. This was the only strike of importance in this district since 1913. Most of the other strikes of coal miners were for adjustments in piece rates, against suspension of miners or discrimination in employment, or for adjustments in working conditions.

**MANUFACTURING.**—Clothing factories were affected by forty disputes which involved over 18,000 workers causing nearly 200,000 days' time loss. A strike of men's clothing factory workers in Montreal, P.Q., in July involved 4,000 workers for two weeks and there were two disputes involving women's clothing factories in Montreal in August involving about the same number for a month. In Toronto,

Ont., there were four important disputes involving women's clothing factories and also one in Winnipeg, Man. These strikes were called to secure and to enforce union agreements with improved conditions. There were also numerous disputes in furniture and wood working factories and in boot and shoe factories. In the other manufacturing industries the disputes were not numerous or important except in pulp and paper mills, where there were three strikes for the partial restoration of previous wage reductions, which had been conceded in a number of other establishments.

**CONSTRUCTION.**—As in 1933 there were very few disputes and none involving many workers for prolonged periods.

**TRANSPORTATION AND PUBLIC UTILITIES.**—The only disputes involved men engaged in loading boats, chiefly pulpwood and timber, demanding increased wages.

**TRADE.**—Three out of the four disputes recorded involved rag sorters and scrap metal workers, the other involving poultry pickers.

**SERVICE.**—A strike of radio station musicians in Montreal, P.Q., and a sympathetic strike affecting somewhat a number of stations throughout Canada were the only disputes of importance. There were also a number of strikes in restaurants in Toronto, Ont., for union wages and conditions.

### Analysis of Statistics, 1934

Table I is a summary of the principal statistics for the period for which the record has been compiled beginning in 1901. The table shows the number of disputes beginning in each year and the number in existence during the year, the difference in each case being the number of disputes carried over the end of the previous calendar year. A small number of disputes have been carried over at the end of every year except 1903 and 1929. The approximate number of employers involved in all industries as well as the number of workers involved and the time loss, is given. In addition to these data, the number of disputes in existence during each year in coal mining and in industries other than coal mining is given, along with the number of workers involved and the time loss. A study of the latter figures reveals that a few disputes in coal mining in some years account for a large proportion of the workers involved and for a still larger proportion of the time loss resulting.

Table II gives an analysis by numbers of workers involved and shows that ten disputes involved one thousand or more workers in each case, that 16 disputes involved between

500 and 1,000 workers and that these 26 disputes involved 68.3 per cent of the total number of workers during the year, resulting in 70.2 per cent of the total time loss. Most of the disputes involved less than 500 workers.

Table III gives an analysis by time loss, and shows that one dispute caused 21.8 per cent of the total time loss for the year, while over one-half the disputes resulted in less than 1,000 working days' time loss in each case and caused only 6.3 per cent of the total time loss.

Table IV, an analysis by duration, that is the number of working days each dispute was in progress, shows that 72 disputes, almost 40 per cent, lasted less than five working days; that 131 lasted less than fifteen days and involved about two-thirds of the workers in all disputes during the year; while 44 disputes, 23 per cent, lasted twenty-five days or longer. These last, involving 27 per cent of the workers, resulted in 66 per cent of the time loss for the year.

Table V, an analysis by provinces, shows that nearly half, or 46.6 per cent, of the disputes during the year occurred in Ontario and that these involved about one-third of the workers and 30 per cent of the time loss for the year. The number of disputes occurring in Quebec was 31, involving nearly 30 per cent of the workers and causing over 20 per cent of the time loss for the year. In British Columbia 22 disputes caused a time loss of over 140,000 days, due chiefly to one strike of loggers which involved 2,300 workers out of 4,249 workers involved in disputes in the province during the year. In Nova Scotia the number of disputes, as well as the number of workers and time loss, was substantial, while in the remaining provinces, except Manitoba, the figures were comparatively small. The only dispute inter-provincial in nature was that of radio musicians in July in sympathy with musicians in Montreal.

Table VI, an analysis by industries, shows that, as in 1933, nearly one-half the time loss for the year and more than one-half the number of disputes and workers involved, were in manufacturing, chiefly in textile and clothing factories with a substantial number in shoe factories. The numerous disputes in the "other wood products" group, furniture factories, sawmills, etc., involved small numbers of workers but resulted in appreciable time loss. Logging and mining also accounted for considerable time loss, in the former, chiefly due to a strike of 2,300 loggers on Vancouver Island resulting in 125,000 working days' time loss, while in the latter there were 28 disputes during the year many of which involved relatively large numbers of miners but which

were of short duration, so that the resulting time loss was not large. In construction there were fewer disputes and less time loss than in 1933, which was the lowest in years. The other

disputes during the year involved few workers and resulted in relatively little time loss.

Table VII, an analysis by causes and results, shows that over one-half of the disputes

TABLE II.—STRIKES AND LOCKOUTS, 1934, BY NUMBER OF WORKERS INVOLVED

Number of workers involved	Disputes		Number involved		Time loss	
	Number	Per cent of total	Workers	Per cent of total	Man-working days	Per cent of total

British Columbia.....	22	11.5	4,249	9.2	140,787	24.5
Yukon Territory.....						
Interprovincial.....	1	0.5	200	0.5	3,000	0.5
Total.....	191	100.0	45,800	100.0	574,519	100.0

during the year were due to demands for increases in wages or increases in wages and other changes, mainly adjustments in hours and recognition of unions or shop committees. These involved about two-thirds of the workers and resulted in most of the time loss for the year. Thirty-six disputes were in regard to union questions, 16 to secure or to maintain union wages and working conditions, seven each for union recognition and against the discharge of workers for union activity. Nine disputes were against the discharge of workers other than in connection with union questions. Six disputes involving 2,770 workers were in sympathy with other strikes and resulted in a time loss of 25,220 working days. In results more than two-thirds of the workers were either totally or partially successful in securing their demands.

Table VIII, an analysis by industries and methods of settlement, shows that 108 of the 191 disputes, involving 21,541 workers, almost one-half of the total during the year, were

settled by direct negotiations between the workers or their representatives and the employers. Twenty-six disputes involving 12,047 workers were settled by the return of workers without securing their demands, while in thirty disputes involving 1,791 workers the strikers were substantially replaced. Twenty-four disputes involving 6,291 workers were settled by conciliation or mediation of a third party, usually a representative of the Dominion or of a provincial government. Two disputes were settled by reference to arbitration.

Table IX gives an analysis by months for the past eleven years, showing the number of disputes commencing during each month, as well as the number of disputes in existence, and the number of workers involved each month, both in new disputes and in all disputes in progress, with the total time loss by months. This table shows that the greatest number of disputes during a year generally

(Continued on page 129)

*(Continued from page 112)*

occurs in May and that the greatest time loss generally occurs in July. The years 1930 and 1931 were exceptions, however, in that the greatest number of disputes commenced in September and the largest time loss occurred in February in 1930 and in October in 1931, closely followed by March, September and November. The year 1932 was an exception in that the greatest number of disputes commenced in July, the second greatest number in February, and a large number during the last three months of the year. Most of the time loss, however, occurred during May, June, July and August, as in other years.

In 1933 the greatest number of disputes commenced in August and November closely followed by September. It was also during the last half of the year that most of the

workers were involved and the greatest time loss occurred. The exception was February when three of the six disputes commencing during the month involved large numbers of workers and resulted in the second largest time loss of any month during the year.

In 1934 a large number of the disputes occurred comparatively early in the year, causing considerable time loss, especially in March and April, and the figures as to numbers of disputes, numbers of workers involved and time loss were substantial until November, there being relatively few disputes of importance during the last two months of the year.

Table X gives the list of strikes and lockouts occurring during the year, with certain details as to causes, results, etc.

### Strikes and Lockouts in other Countries during 1934

The accompanying table gives the principal figures as to strikes and lockouts in other countries since 1919, as compared with Canada, showing the number of disputes (strikes and lockouts), the number of employees involved in stoppages of work and the time loss in man working days in those countries for which such figures are available.

In some of these countries, figures as to strikes and lockouts are published separately, but in the table here given they have been included together. The practice varies greatly in the various countries also in regard to other points. In some cases the numbers of strikes and lockouts shown for a year is the number beginning during the year, in other cases it is the number ending during the year, and in still other cases it is the number in existence during the year, including those carried over from the previous year with those beginning during the year.

The figures as to the number of employees involved published by some countries show not only the number of employees directly involved, but also the number of those indirectly affected, that is thrown out of work by disputes to which they are not parties; but exact information as to these points is not always given. In the table given herewith the column showing numbers of employees involved includes figures for the numbers directly involved, or the total number directly and indirectly involved according to the method adopted by the country concerned.

For some countries, figures as to time loss, that is the number of "man working days" lost, are not given.

Footnotes to the table indicate the nature of the statistics with reference to the above points. Many countries publish these statistics only once each year or less frequently, the figures being issued in some cases after an interval of some length.

In the following notes as to the more important disputes in various countries in the year 1934, the information is taken chiefly from press reports, information as to individual disputes not being available from official reports in most cases.

#### Great Britain

The time loss due to industrial disputes during 1934 was lower than for any year during the period of over forty years for which comparative figures are available. Although the number of disputes was fairly high, the majority of them involved only small numbers of workers and were confined to one establishment.

Among the principal disputes of the year, was one involving 2,000 plasterers and labourers in the principal towns of Scotland from March 1 to June 20, which was terminated with no immediate change in wage rates but with the understanding that it should be changed with the standard rates in other sections of the building trades.

Over one third of the total time loss for the year occurred in the coal mining industry, in which two disputes in South Wales and one in South Yorkshire lasted several weeks before being terminated by compromise settlements.

In the construction industry, a strike of 3,000 asphalters in London and various prov-

incial towns was in effect between June 22 and July 7, when a compromise settlement was reached.

### Belgium

A strike involving 16,000 woollen textile workers in Verviers and district began February 26. The workers refused the conditions of a new agreement presented by the employers involving certain changes in working conditions principally the abolition of the payment of an extra 20 per cent in the wage rates for night work. At the end of July the strike was called off unconditionally.

### France

A dispute in the cotton manufacturing industry in the Roanne district was in effect from November 8, 1934 to January 7, 1935. Although only a smaller number of workers were at first involved, the dispute extended to include 8,000 workers. Settlement was made with the acceptance of a 9 per cent reduction in wages (which for the lower paid workers was not to become effective until July 1) and for a joint committee to fix wages for certain classes, the rates for whom were formerly fixed by individual employers.

### Hungary

A strike of 1,200 coal miners at Pecs in October to secure increased wages and more days work per week was partially successful. The miners had remained underground for five days without food to enforce their demands.

### India

In the cotton textile mills in Bombay, over 80,000 workers went out on strike between April 23 and April 27, and another 9,000 during May, against a wage reduction and the introduction of a new system of work. The settlement reached June 20 was in favour of the employers.

In the textile mills in Sholapur, 17,000 workers were on strike from the third week of February until May 19, against wage reductions. This strike also ended in favour of the employers.

### United States

During the first ten months of 1934 the strike activity which began in 1933 continued, and although the number of disputes for this period was less than for the same period in 1933 the time loss was considerably greater. The most important cause of dispute in 1934 was the same as in 1933, that is, disagreement over the interpretation of "section 7A" of the National Industrial Recovery Act which provides in part that all codes and agreements under the Act contain a provision that employees shall have the right to organize and bargain collectively through representatives of

their own choosing, and shall be free from the interference, restraint and coercion of employers of labour or their agents in the designation of such representatives or in self organization or in other concerted activities for the purpose of collective bargaining or other mutual aid or protection and that no employee on seeking employment shall be required as a condition of employment to join any company union or to refrain from joining, organizing or assisting a labour organization of his own choosing.

The National Labour Board established in 1933 and later the National Labour Relations Board which superseded it in June, 1934, continued to settle a great number of disputes and many further stoppages of work were prevented through the work of these Boards.

Among the principal disputes of the year was the longshoremen's strike in the Pacific Coast ports which began May 9, involving 12,000 longshoremen and 15,000 marine workers and allied trades and which tied up shipping in these ports. Between July 16 and 19 a general sympathetic strike was in progress in San Francisco involving, it is estimated, 100,000 workers in local transportation and other industries. After the general strike was called off, the longshoremen's strike continued until, through the intervention of the federal government, it was agreed to resume work and refer the dispute to the National Longshoremen's Board. The decision of this Board was that all longshoremen should be hired through halls operated jointly by the International Longshoremen's Association and the employers, with provisions for a 6-hour day and a 30-hour week and an increase in the basic hourly wage rate from 85 to 95 cents.

By far the largest dispute of the year was in the cotton textile industry which was in progress from September 4 to September 22, in the eastern and southern states, involving in all an estimated number of 400,000 workers. Work was resumed through the mediation of a board appointed by the President of the United States when it was agreed to set up a permanent Textile Labour Relations Board to regulate labour relations, and to regulate the "stretch-out system," one of the matters in dispute, and also the federal government undertook to investigate wages and hours throughout the industry with a view to making changes.

Among the other important disputes, there was a strike of 12,300 aluminum factory workers in Pennsylvania, in Tennessee and at Massena, New York, which was in effect from August 11 to September 6 when union recognition was conceded with further arbitration on other points.

Other disputes which have been noted in various issues of the LABOUR GAZETTE during the year included workers in the dress manu-

facturing industry in New York city in April, knit goods manufacturing workers in New York city in August, silk and rayon dyers at Patterson, New Jersey, this strike involving 25,000 workers in effect from October 24 until early in December and resulting in a reduction

in hours from 40 to 36 per week with increased hourly wage rates. Strikes of taxi-drivers in New York city and of truck drivers in Minneapolis occasioned disorders and violence, as was also the case in regard to the longshoremen's strike on the Pacific Coast noted above.

## THE EMPLOYMENT AND SOCIAL INSURANCE ACT

Bill introduced in the House of Commons on January 29, 1935

IN pursuance of the policy of social reform which was announced in the Speech from the Throne on January 17 (LABOUR GAZETTE, January, 1935, page 33), the Right Hon. R. B. Bennett introduced in the House of Commons on January 29, the Employment and Social Insurance Act, the bill receiving its first reading on that date. The principles involved in the proposed legislation were outlined by the Prime Minister in moving a resolution, which was unanimously adopted, declaring "that it is expedient to introduce a bill to establish an employment and social insurance commission; to provide for a national employment; for insurance against unemployment; for aid to unemployed persons, and for other forms of social insurance and security, and for purposes related thereto; and to provide for such contributions as may be necessary to carry into effect the proposed legislation."

In presenting the Bill the Prime Minister invited suggestions from the House for its improvement: "I realize," he said, "that there are imperfections in a measure of this character. I do not for a single moment suggest that it is free from imperfections, but as we are all desirous and have expressed our willingness to enact such legislation I can only say that the government will view with the greatest pleasure and satisfaction constructive and timely suggestions from those who sit in any part of the chamber in order that the legislation when completed may serve to the very greatest possible extent the demands and necessities of those whom it is sought to benefit."

The main provisions of the Bill, as introduced, are summarized in the following paragraphs.

### Title and Preamble

The full title of the Act is as follows: "An Act to establish an Employment and Social Insurance Commission, to provide for a National Employment Service, for Insurance Against Unemployment, for aid to Unemployed Persons, and for other forms of Social Insurance and Security, and for purposes related thereto."

The question of the competence of the Dominion Parliament to legislate on the subject of social insurance is dealt with in the Preamble, which reads:—

"Whereas the Dominion of Canada was a signatory, as Part of the British Empire, to the Treaty of Peace made between the Allied

and Associated Powers and Germany, signed at Versailles, on the 28th day of June, 1919; and whereas the said Treaty of Peace was confirmed by the Treaties of Peace Act 1919; and whereas, by Article 23 of the said Treaty each of the signatories thereto agreed that they would endeavour to secure and maintain fair and human conditions of labour for men, women and children, both in their own countries and in all countries to which their commercial and industrial relations extend, and by Article 427 of the said Treaty declared that the well-being, physical, moral and intellectual, of industrial wage-earners is of supreme international importance; and whereas it is desirable to discharge the obligations to Canadian Labour assumed under the provisions of the said Treaty; and whereas it is essential for the peace, order and good government of Canada to provide for a National Employment Service and Insurance against unemployment, and for other forms of Social Insurance and for the purpose of maintaining on equitable terms, interprovincial and international trade, and to authorize the creation of a National Fund out of which benefits to unemployed persons throughout Canada will be payable and to provide for levying contributions from employers and workers for the maintaining of the said Fund and for contributions thereto by the Dominion: Therefore His Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts" etc.

### Employment and Social Insurance Commission

The Act is to be administered by a Commission, to be known as the Employment and Social Insurance Commission, with headquarters at Ottawa, consisting of a Chief Commissioner and two other commissioners, of whom one is to be appointed after consultation with workers' organizations and one after consultation with employers' organizations. The commissioners will hold office for ten years, and must devote their whole time to the duties of their office. They are to undertake, as soon as possible investigations into the possible extension of insurance to employments at present excepted from the provisions of the Act; into methods of provision of unemployed persons, whether such persons are ordinarily employed in occupations covered by the Act or otherwise; into possible methods of training unemployed persons with a view

to increasing their skill or rehabilitating them in employment. The proposals made by the Commission may include schemes of assistance, establishment of unemployment funds, etc.

### Employment Service

The Commission is to organize an Employment Service for the Dominion, with regional divisions and employment offices within each division. The central office in each regional division will be used as a clearing house for information concerning vacancies and applications for employment, and the local offices will be co-ordinated so that the information so gathered may become available elsewhere. The Commission has authority to establish local committees appointed after consultation with the workers and employers, to advise and assist the Commission. The Commission may also authorize the granting of loans to workers travelling to places where work has been found for them.

### Unemployment Insurance

*Insured and Excepted Classes.*—All persons of the age of sixteen years and upwards who are employed under a contract of service or apprenticeship, are to be insured, with the exception of the following employments; (a) employment in agriculture, horticulture and forestry; (b) fishing; (c) lumbering and logging; (d) hunting and trapping; (e) transportation by water or by air, and stevedoring; (f) banking, mortgage, loan, trust, insurance or other financial business; (g) domestic service, except where the employed person is employed in a club or in any trade or business carried on for the purposes of gain; (h) professional nurses for the sick or a probationer undergoing training for employment as such nurse; (i) teachers, including teachers of music and dancing, whether engaged in schools, colleges, universities or institutes or in a private capacity; (j) Permanent Active Militia, the Royal Canadian Navy, the Royal Canadian Air Force and the Royal Canadian Mounted Police; (k) Dominion, provincial, or municipal police forces; (l) Employment in the public service of Canada pursuant to the provisions of the Civil Service Act; or in the public service of Canada or of a province or by a municipal authority upon certification satisfactory to the Commission that the employment is having regard to the normal practice of the employment, permanent in character; (m) agents paid by commission or

fees or a share in the profits, or partly in one and partly in another of such ways, where the person so employed is mainly dependent for his livelihood on his earnings from some other occupation, or where he is ordinarily employed as such agent by more than one employer, and his employment under no one of such employers is that on which he is mainly dependent for his livelihood; (n) employment otherwise than by way of manual labour and at a rate of remuneration exceeding in value two thousand dollars a year or in cases where such employment involves part time service only, at a rate of remuneration which, in the opinion of the Commission, is equivalent to a rate of remuneration exceeding two thousand dollars a year for full time service; provided that any person in respect of whom contributions have been paid as an insured contributor for not less than five hundred weeks may continue as an insured contributor notwithstanding anything in this paragraph contained; (o) employment of a casual nature otherwise than for the purpose of the employer's trade or business; (p) employment of any class which may be specified in a special order made by the Commission, and declared by the Commission to apply for the purposes of this Act, as being of such a nature that it is ordinarily adopted as subsidiary employment only and not as the principal means of livelihood; (q) employment in the service of the husband or wife of the employed person; (r) employment for which no wages or other money payment is made, where the person employed is the child of, or is maintained by the employer.

The Commission has power either to enlarge or to restrict the above "excepted" employments in the event of anomalies in the operation of the Act.

The following classes of employed persons are exempt from liability to contribute: Persons in receipt of a pension or income of \$365 or more yearly; persons engaged in seasonal work; and those who work habitually for less than the ordinary working day. Certificates of exemption may be granted only by the Commission.

*Contributions.*—An Unemployment Insurance Fund is to be established, derived partly from grants by Parliament, partly from contributions from employed persons, and partly by employers, which contributions are payable by means of revenue stamps. The weekly rates of contribution are set forth in Schedule II of the Act as follows:—

## WEEKLY RATES OF CONTRIBUTION

Class of employed person	By the employer	By the employed person
Aged 21 years and upwards:		
Men. . . . .	\$0 25	\$0 25
Women. . . . .	0 21	0 21
Aged 18 years and under 21 years:		
Young men. . . . .	0 18	0 18
Young women. . . . .	0 15	0 15
Aged 17 years and under 18 years:		
Boys. . . . .	0 11	0 11
Girls. . . . .	0 09	0 09
Aged 16 years and under 17 years:		
Boys. . . . .	0 07	0 07
Girls. . . . .	0 06	0 06

Employers are liable to pay both contributions, but they may recover from the workers the amount paid on their behalf by deducting it from their wages.

*Unemployment Benefit.*—Insured persons who are unemployed, are entitled to receive payments at weekly or other prescribed intervals at the rates specified in Schedule III of the Act as follows:—

## RATES OF UNEMPLOYMENT BENEFIT

Class of insured person	Daily rate	Weekly rate
Aged 21 years and upwards:		
Men. . . . .	\$1 00	\$6 00
Women. . . . .	0 85	5 10
Aged 18 years and under 21 years:		
Young men. . . . .	0 70	4 20
Young women. . . . .	0 60	3 60
Aged 17 years and under 18 years:		
Boys. . . . .	0 45	2 70
Girls. . . . .	0 35	2 10
Aged 16 years and under 17 years:		
Boys. . . . .	0 30	1 80
Girls. . . . .	0 25	1 50
Dependents' benefit:		
Adult dependent. . . . .	0 45	2 70
Dependent child. . . . .	0 15	0 90

The statutory conditions for the receipt of unemployment benefit are—

(1) that contributions for not less than 40 full weeks have been paid on behalf of the beneficiary while employed in insurable employment during a period not exceeding two years;

(2) that application has been made for benefit in the prescribed measure, proof being given that the applicant has been continuously unemployed since the date of his application; and

(3) that the insured contributor applying is capable of and available for work, but is unable to obtain suitable employment.

Any three days of unemployment, whether consecutive or not, within a period of six consecutive days, is to be treated as a continuous period of unemployment, and any

two such continuous periods separated by a period of not more than six weeks is to be treated as one continuous period of unemployment.

The "continuous unemployment" mentioned in the second statutory condition (above) is not to be affected by the fact that an applicant has refused (a) an offer of employment arising in consequence of a stoppage of work due to a trade dispute, or (b) an offer of employment at wages lower, or on conditions less favourable, than those which he might reasonably have expected to obtain, having regard to those which he habitually obtained in his usual occupation, or would have obtained had he continued to be so employed, or (c) an offer of employment in his usual occupation at wages lower, or on conditions less favourable, than those observed by agreement between employers and employees, or failing any such agreement, than those recognized by good employers; "Provided that after the lapse of such an interval from the date on which an insured contributor becomes unemployed, as, in the circumstances of the case, is reasonable, employment shall not be deemed to be unsuitable by reason only that it is employment of a kind other than employment in the usual occupation of the insured contributor, if it is employment at wages not lower and on conditions not less favourable than those observed by agreement between employees and employers or, failing any such agreement, than those recognized by good employers, but no insured contributor shall be disqualified for receipt of benefit by reason only of his refusal to accept employment if by acceptance thereof he would lose the right—(i) to become a member of, or (ii) to continue to be a member and to observe the lawful rules of, or (iii) to refrain from becoming a member of, any association, organization, or union of workers."

An applicant is not to be considered as unemployed in periods during which he was in receipt of compensation substantially equivalent to the wages he has lost, or was following an occupation for which he receives profit, unless it was carried on outside his ordinary working hours. An insured contributor will not be considered unemployed in any recognized holiday, or on any day of any week during which he works for the time which constitutes a full week's work for his class.

Disqualifications for benefit are as follows: loss of work due to a trade dispute, unless the applicant can prove that he was not interested in such dispute, and does not belong to the class of workers affected thereby; neglect by

the insured contributor to avail himself of the opportunity to work; loss of work due to misconduct; while the contributor was an inmate of a public institution or in receipt of an old age pension.

The duration of benefit is as follows: a contributor who is duly qualified is entitled to receive, in a benefit year, benefit for periods not exceeding in the aggregate 78 days of continuous unemployment, and also for additional days as follows: "An insured contributor in respect of whom not less than one hundred contributions have been paid during the complete insurance years, not exceeding five, last preceding the benefit year for which the computation of additional days is made shall be qualified for additional days determined as of the beginning of such benefit year equal to one day for every contribution paid in respect of him as an insured contributor for the insurance years aforesaid, less one day for every three days for which benefit has been paid to him for his benefit year, if any, which ended in the period, not exceeding five years, immediately preceding his benefit year for which the computation is made."

The benefit accruing to an insured contributor is not to extend beyond any "benefit year." Only periods of *bona fide* employment will count in computing benefits. The term "benefit year" of an insured contributor is defined as being the period of twelve months beginning on the date on which, on an application for benefit, he proves for the first time (a) that the first statutory condition is fulfilled in his case; and (b) also, in the case only of an insured contributor who has exhausted his benefit rights in his last preceding benefit year, that thirteen contributions have been paid in respect of him since the Sunday last before the last day for which he received benefit; and every subsequent period of twelve months commencing on the date on which that contributor on a claim for benefit proves the matters aforesaid for the first time after the termination of his last preceding benefit year.

The Commission has authority to impose additional conditions and restrictions in connection with casual workers, seasonal workers, intermittent workers and married women. The expression "continuous period of employment" may be modified so as to remove anomalies in these classes.

Questions which arise in connection with the administration of the Act are to be decided by the Commission, but persons feeling themselves to be aggrieved by the Commission's decision may appeal to the Exchequer Court.

The Commission has power to appoint insurance officers for each regional division. The Governor in Council also may appoint chairmen of courts of referees, these courts being representative of the parties concerned. There will also be umpires and deputy umpires, designated by the Governor in Council from amongst the Judges of the Exchequer Court and of the Superior Courts of the Provinces. The procedure to be followed in connection with the submission of claims is fully laid down in the Act. Provision is also made for the appointment of inspectors with power to make examinations concerning compliance with the Act, etc.

Another section of the Act, containing financial provisions, lays down the procedure to be followed in connection with the Unemployment Insurance Fund, contributions by Parliament, investments, the Bank of Canada being appointed as the fiscal agent in these transactions.

*Unemployment Insurance Advisory Committee.*—This committee will advise and assist the Commission, report on the condition of the fund, and make recommendations if the fund is, or is likely to become, insufficient to discharge its liabilities. The Committee is to consist of a chairman and from four to six other members, some of the latter being chosen after consultation with organizations of workers and employers respectively.

### National Health

The duties and powers of the Commission under this Part of this Act are to be exercised, so far as may be found practicable and expedient, in co-operation with any department or departments of the Government of Canada, with the Dominion Council of Health, with any province or any number of provinces collectively, or with any municipality or any number of municipalities collectively, or with associations or corporations.

It will be the duty of the Commission (a) to assemble reports, publications, information and data concerning any scheme or plan, whether a state, community or other scheme or plan for any group or class of persons, and whether in operation or proposed, in Canada or elsewhere, of providing, on a collective or on a co-operative basis by means of insurance or otherwise, for (i) medical, dental and surgical care, including medicines, drugs, appliances, or hospitalization, or (ii) compensation for loss of earnings arising out of ill-health, accident or disease; (b) to analyse and make available to any province, municipality, corporation or group of persons desiring to use the information so assembled for the pur-

pose of providing such benefits or any of them; and (c) as far as may be found practicable so to do on request by any province, municipality, corporation or group of persons, to examine and report on any such scheme or

plan proposed to be put into effect or in effect at the date of such request, and to afford technical and professional guidance in regard to the establishing, working or reorganization of the scheme or plan.

### Proposed Labour Legislation in New York State

In his message to the New York Legislature on January 2 Governor Lehman recommended the following changes in the State Labour laws:

(1) Unemployment insurance, to be co-ordinated to a federal scheme.

(2) Requirement that all workmen's compensation insurance, other than that carried by qualified self-insurers, be underwritten by the State insurance fund.

(3) The eradication of medical abuses in connection with workmen's compensation.

(4) The extension of the workmen's compensation law to embrace all occupational diseases.

(5) Shortening of the maximum hours of work per week for women in factories and mercantile establishments by the elimination of the seventy-eight hours overtime now permitted in factories for women and the thirty hours overtime in mercantile establishments.

(6) Raising the age at which children may leave school to enter industry from 14 years to 16 years.

(7) Reduction of hours of labour for boys between the ages of 16 and 18 years from fifty-four to forty-eight hours per week.

(8) The extension of State regulation and control of industrial home work to embrace home work done in every city, town and village in the State.

(9) The ratification of the Federal Child Labour constitutional amendment.

(10) Branding as against public policy any contract presuming to prohibit a worker from joining a labour organization, commonly referred to as a "yellow dog" contract.

(11) The protection of working-men in labour disputes by assuring to them the right to a trial by jury in case of the alleged violation of an injunction.

(12) A State law governing the conditions and terms under which labour injunctions may be issued by State courts.

(13) Regulation by the State of private fee-charging employment agencies.

(14) A permanent law prescribing a maximum five-day week and an eight-hour day in local and State public works contracts.

(15) A permanent law applying the prevailing rates of wages provisions to the construction, maintenance and repair of highways and water-works outside the limits of cities and villages.

(16) Improvement of the provisions of the labour law prescribing the payment of prevailing rates of wages.

(17) Adherence to the principle that the labour of human beings is not a commodity or article of commerce.

(18) The creation of a commission composed of members of the Legislature and of persons appointed by the Governor to consider and report to the Legislature the advisability of interstate compacts for uniform standards and laws affecting the welfare of labour and conditions of employment.

There were 4,376 accidents reported to the Ontario Workmen's Compensation Board during the month of January, as compared with 4,328 during December, and 3,807 during January of last year. The fatal cases numbered 30, as compared with 16 last January. The total benefits awarded amounted to \$506,070.86, of which \$409,525.54 was for compensation and \$96,545.32 for medical aid. The total benefits awarded last January were \$346,370.01.

The United States Health Service recently published a short report dealing with the problem of silicosis among granite quarrymen. The effects of granite dust generated in granite quarrying are described. In the study of 63 men it appeared that 38 per cent were exposed to many times the amount of dust that is now considered safe. The clinical findings disclosed that drillers were the only persons showing pathologic lung changes. Half of these workers with an exposure of 5 to 19 years had silicosis, and 4 of the 5 men with more than 20 years of such trade life showed this condition. The study suggests that quarry drillers may experience as high a death rate from pulmonary tuberculosis as to other pneumatic-tool workers in granite-cutting sheds. Methods for the elimination of dust in quarry operations are also presented.

## NEW HOUSING BILL IN BRITISH PARLIAMENT

THE British Government introduced in Parliament in January a new Housing Bill, its purpose being to deal with the evil of overcrowding. Some of the provisions of the Bill are outlined in the *Economist* (London), January 19, as follows:—

Definite standards of house occupation are laid down, and subject to certain safeguards overcrowding is to be made a punishable offence as soon as the accommodation necessary to prevent it has been provided. The provision of that accommodation is to be the duty (in the main) of local authorities, who will be required to make a survey of their areas and to report to the Ministry of Health the overcrowding they have discovered and the steps they propose to take to abolish it. A time limit will also be determined by the Ministry within which the work must be completed. The maximum standard per house occupation subject to proper separation of the sexes after ten years of age, is as follows:—

Where a House consists of	The Permitted Number of Persons is
(a) One room.. . . .	2
(b) Two rooms.. . . .	3
(c) Three rooms.. . . .	5
(d) Four rooms.. . . .	7½
(e) Five rooms or more.. . . .	10 with an additional 2 in respect of each room in excess of five.

Account will also be taken of the size of rooms. If rooms are below a certain size, the number of occupants permitted will be reduced according to a definite schedule.

Children under ten years of age will be counted only as half persons, and to meet special cases local authorities will be given temporary licences to relax the standard. It will be the occupier's duty to see that this standard is not infringed, though the landlord will also be liable to prosecution if he can be proved to have knowledge of the infraction of the law. Proceedings can only be taken, however, by the local authority.

In order to facilitate the provision of the accommodation required to enforce this standard, local authorities will be given wide powers to acquire compulsorily sites in the centre of large towns for purpose of redevelopment. The intention of this part is to enable local authorities with congested and overcrowded areas to rehouse their population *in situ* at low rents near to their place of work, by replanning the layout of whole districts and building upwards tenement flats of a suitable design. In the case of redevelopment areas an Exchequer subsidy will be given

on the following scale:—

"The contribution will be a graduated contribution per flat according to the cost of the site, including the cost of developing the site for the purpose of the erection of flats. The basic figure proposed is £6 a year per flat, payable for 40 years, where the cost of the developed site exceeds £1,500 per acre but does not exceed £4,000 per acre, increasing by £1 per flat for each £1,000 per acre increase in site costs up to £6,000, and from that stage by £1 per flat for each £2,000 or part of £2,000 increase. It is provided that the contribution to which this clause relates shall be payable in respect of blocks of flats, otherwise eligible, the building of which is commenced on or after February 1, 1935."

Local authorities will be required to contribute an amount equal to half the Exchequer subsidy. In other cases where redevelopment is not required, the rapid provision of flats may also be subsidized at the discretion of the Minister.

The provision of suitable accommodation by reconditioning is also encouraged by giving local authorities power to acquire compulsorily buildings suitable for this purpose, compensation to owners being given at market value. Local authorities can then either recondition them themselves or hand them over to a housing association to do so.

The Bill also provides for the setting up of a Housing Advisory Committee to be appointed by the Minister, and gives local authorities power to establish House Management Commissions who will take over from them their function of management and maintenance. Finally, some not unimportant concessions are made to "slum" landlords who have done their best to maintain their property and to owners whose property has been included in a clearance area for reasons other than actual unfitness. The "reduction factor," which reduces the compensation which would otherwise be paid to owners of property acquired for re-housing purposes is to be abolished.

The municipality of Weston, Ontario, recently adopted a system of accident insurance for its employees. It is understood that this scheme includes all employees and is in lieu of the protection afforded under the Workmen's Compensation Act. Under the new insurance policy, employees are awarded approximately 100 per cent of their wages for lay-off sustained by injuries occasioned by their employment. Provision is made for payment of medical services, and also hospitalization and nursing services in certain instances.

## PROPOSED HEALTH INSURANCE LEGISLATION IN THE UNITED STATES

A SOCIAL Security Bill is to be introduced as a model measure in 43 State Legislatures in the United States, as a result of action by the American Association for Social Security. The proposals in the bill will be made the basis of a federal subsidy bill to be introduced in Congress. Under this combined Federal and State legislation it is proposed to inaugurate a health insurance system under which the great proportion of those earning less than \$3,000 would receive essential medical services and part compensation for loss of income by illness.

Summarized briefly, the proposed measure provides for a health insurance system embracing all manual works and all other persons earning less than \$60 a week, unless they are agricultural workers, employers, self-employed, or workers for employers whose working force is composed of fewer than three persons. It is estimated that 95 per cent of the nation's non-agricultural workers would be covered by the bill.

The Act would create a fund made up of tri-partite contributions amounting to a total

of 6 per cent of the wages of those insured. The insured earning \$20 or less a week would pay in 1 per cent of their wages; those earning between \$20 to \$40 would pay 2 per cent; those earning more than \$40, 3 per cent. The employers' contributions for the three groups would be  $3\frac{1}{2}$  per cent,  $2\frac{1}{2}$  per cent, and  $1\frac{1}{2}$  per cent. The remaining  $1\frac{1}{2}$  per cent would be paid by the State.

Among the benefits accruing to the employees would be medical, dental and specialists' services for the insured and their families whenever and as soon as any fell ill; cash compensation for loss of wages during illness, at the rate of 50 per cent wages for the insured, with additional percentages for dependants up to a total of 75 per cent of wages, but limited to \$15 a week if the insured did not have dependants and \$22.50 if he had. Cash benefits would be limited to 26 consecutive weeks.

Any physician would have the right to serve the system and the insured would have free choice of practitioners signed up with the insurance commission.

## Pensions of School Teachers in Nova Scotia

In the last report of the Superintendent of Education for Nova Scotia, a summary is given of the pension fund for teachers which has been in operation for five years. It is pointed out that the plan is not actuarial, but is adopted to the peculiar financial relationship between the Department of Education and the teachers which had been created by the system of provincial aid.

The fund is maintained by a reservation of eight per cent made at the source from teachers' grants, supplemented by an equal amount provided by the treasury. In addition, the interest on invested funds is an increasing element in the annual income. As provincial aid increases, it is stated, the annual reservations will increase in proportion, and also the equivalent grant to the fund made by the provincial treasury. The condition of the pension fund reveals a steadily increasing balance, which, it is expected, "will take care of the charges on the fund for years to come if not ultimately rendering it self-maintaining." At the end of 1933, there were 100 pensioners, the total paid in pensions amounted to \$149,703.44, while the balance in the fund was \$269,541.84.

It is further explained that annuities, as distinguished from pensions, have been paid to teachers since 1908 on the ground of veteran service or total disability. Teachers retiring since 1928 come under the Pension Act (LABOUR GAZETTE, August, 1929, page 875). The number of annuitants at the close of 1933 was 81 and the amount paid in annuities was \$26,102.33.

The statistics in the report indicate that during 1933 there was a total enrolment of 117,238 pupils in public schools and 16,701 in high schools—an increase of 1,197 in the former and 1,475 in the latter.

The number of teachers employed in the public schools was 3,597, as compared with 3,542 in 1931-32. Teachers' salaries for the school year ended July, 1933, show a slight average decline from those of the previous year. In 1932 the average salary for all classes was \$757 having steadily risen from \$661 in the school year of 1927. But in 1933 the average salary declined to \$741, the average obtaining in 1930.

# OLD AGE PENSIONS IN CANADA Financial Summary as at December 31, 1934.

THE accompanying table gives a financial summary to December 31, 1934, of operations under the Old Age Pensions Act (Revised Statutes of Canada, 1927, Chapter 156, amended by Statutes of 1931, Chapter 42) and under the concurrent Acts adopted by the provinces participating in the scheme.

## FINANCIAL SUMMARY OF OLD AGE PENSIONS IN CANADA AS AT DECEMBER 31, 1934

	Alberta	British Columbia	Manitoba	Nova Scotia	Ontario	Prince Edward Island	Saskatchewan	Northwest Territories	Totals
	Act effective Aug. 1, 1929	Act effective Sept. 1, 1927	Act effective Sept. 1, 1928	Act effective March 1, 1934	Act effective Nov. 1, 1929	Act effective July 1, 1933	Act effective May 1, 1928	Order in C. effective Jan. 25, 1929

\*Percentage figures based on estimated population for 1934, furnished by Dominion Bureau of Statistics.

## OLD AGE PENSION REGULATIONS IN ONTARIO

**R**EGULATIONS under the Old Age Pensions Act (Statutes of Ontario, 1929, chapter 73) were approved by the Dominion Government by Order in Council P.C. 43, January 14, 1935. The Regulations, which had been made under the Act in May, 1929, are rescinded, being replaced by the following new Regulations.

### REGULATIONS Made Pursuant to the Old Age Pensions Act, 1929 (Ontario)

1. In these regulations:—

- (a) "Municipality" shall mean county, union of counties, city, separated town, or town of 10,000 or more population in a Provisional Judicial District.
- (b) "District" shall mean a Provisional Judicial District (excluding the cities and towns of 10,000 or more population therein) and the Provisional County of Haliburton.

For the purposes of the administration of this Act the Province shall consist of three types of Municipality:—

- (a) Cities of over 70,000 population—namely Toronto, Hamilton, Ottawa and London.
- (b) Counties, Cities under 70,000 population, and separated towns.
- (c) Provisional judicial districts.

2. In Cities having a population of 70,000 or upwards, there shall be for the purposes of the Act a local board consisting of five members appointed by the municipal council at its first meeting in each year. The members of such Boards shall hold office until their successors are appointed. At the first meeting and thereafter at the first meeting in each year the Board shall appoint its officers.

### Method of Administration

#### Cities of over 70,000 population

3. (1) The form of administration established at present within these cities shall be continued except that when the application form has been completed in duplicate by the official designated by the Local Board for that purpose the applicant shall attest the truth of his statements by a statutory declaration which shall be made before a Judge or a Magistrate. Where a Judge or a Magistrate is not available the statutory declaration may be made before a Justice of the Peace or before the Secretary of the Local Old Age Pensions Board. All other declarations required to complete the applications may be taken before any person duly qualified to administer oaths.

(2) *Counties and separated towns and cities with population under 70,000.*

- (a) In all counties and separated towns and cities under 70,000 the Local Boards are hereby abolished.
- (b) In the counties the township clerks only are designated to complete applications for Old Age Pension. In villages and towns comprised within the county and having a municipal organization and in separate towns and cities under 70,000 population the municipal clerk is designated to complete the application.

- (c) In no case shall the clerks of the municipalities so designated charge the pensioner or accept from the pensioner payment for preparing and completing the application. The County Council or council of the separated town or city under 70,000 population may, however, pay such an amount for this service as may be deemed adequate by the Council.
- (d) When the information required on the application form has been given and duly entered upon the form by the person designated, the applicant shall be required to make a statutory declaration as to the truth of the information given before the County Judge or a Magistrate. Where the applicant by sickness or other infirmity is unable to leave his residence and County Judge or Magistrate is not available a Justice of the Peace who is not such by virtue of his office may take the statutory declaration.
- (e) An application shall be considered as completed only when the information required by the application form has been duly entered thereon and when supporting evidence necessary to establish residence, age, naturalization and assets has been provided by the applicant. It shall not be the duty of the person designated to complete the application to state the amount of pension payable. All applications shall be in duplicate.
- (f) In the county, village or town, comprised within the county organization, the clerk of the township, village or town immediately upon its completion shall forward both copies to the county clerk who shall file one copy in his office and immediately forward the other copy to the Provincial Old Age Pension Commission, Parliament Buildings, Toronto. In the separated town or city under 70,000 population the Municipal Clerk shall keep one copy on file in his office and immediately forward the other copy to the Provincial Old Age Pensions Commission, Toronto.
- (g) On receipt of the completed application, the Old Age Pension Commission shall determine the amount of pension payable to the applicant and shall immediately inform the clerk of the County, city or separated town concerned as to its decision. If within twenty days from the date of the mailing of such information to the said county, city or separated town clerk, no appeal against the decision of the Old Age Pension Commission has been received by the Commission, the municipality shall be deemed to have accepted the decision of the Commission and the latter shall immediately notify the applicant of its decision.
- (h) Where the applicant for Old Age Pension shall desire to appeal the decision of the Commission he shall appeal direct to the Commission and if the Commission be satisfied as to the validity of the appeal it shall change its decision in accordance with such appeal, and shall notify the pensioner and the clerk of the municipality concerned of the change in its decision.

If a special investigation be deemed necessary by the Old Age Pension Commission, a special Inspector may be sent by the Commission or the Commission may ask the local Mothers' Allowance Investigator, or other Provincial Government official to make the investigation and to report directly to the Commission.

#### *Provisional Judicial Districts*

In the Provisional Judicial Districts the Provincial Mothers' Allowance Investigator in that district is designated to complete applications and to arrange for the taking of the statutory declaration. These applications shall be made in duplicate and one copy to be retained by the Investigator who will proceed to investigate the statements made in the application. Upon the completion of the investigation the Investigator shall forward the other copy together with the Investigation report to the Old Age Pensions Commission, Toronto. The Commission upon receipt of the application and the investigator's report, with the necessary supporting proof of age, residence, assets, et cetera, shall determine the amount of pension and shall immediately notify the applicant. Should the applicant desire to appeal the decision of the Commission, this may be done directly to the Old Age Pensions Commission, Parliament Buildings, Toronto.

The Commission shall judge the merits of the appeal, and if necessary may order a special investigation by an official of the Department, or by any provincial employee in that locality.

4. Application for a pension shall be in the form annexed hereto. With each application there shall be furnished the proofs as to age mentioned in such form and in the Dominion regulations.

5. Applications must be made to the Local Authority of the Municipality or district where the applicant then resides.

6. In case of the removal of a pensioner from one municipality to another or to another Province, the municipality in which the applicant

resided at the time of application for an Old Age Pension shall continue to be liable for the municipal portion of the amount of pension paid to such pensioner.

7. In case of the removal of a pensioner from a district to a municipality the municipality shall become liable to contribute towards such pension one year after such removal.

8. Where there is a dispute as to the residence of a Pensioner such dispute shall be determined by the Commission whose decision shall be final and binding.

9. Where a pensioner moves outside a Municipality or district where the pension was granted the Local Secretary of the City or the Municipal Clerk of the City or County, as the case may be, shall notify the Commission of the date of such removal and of the place to which the pensioner has gone.

10. In the event of the death of a pensioner any part of the pension unpaid may be paid to such person as the Commission considers equitably entitled thereto.

11. The Commission shall render monthly to the corporation of each municipality an account for ten per centum of the pensions for which such corporation is liable.

12. The Local Authority must notify the Commission of the death of any pensioner, or of any change that may occur in the family or financial condition of a pensioner, immediately upon becoming aware of same.

13. The Commission shall be entitled to recover from a Pensioner any sum improperly paid by way of a pension whether as the result of the non-disclosure of facts, innocent or false representations or any other cause.

14. The Commission and any Local Authority shall be entitled to obtain without charge from any Government department of Ontario any available information deemed necessary in the administration of the "Old Age Pensions Act, 1927", Chapter 156 Statutes of Canada, and the "Old Age Pensions Act, 1929", Chapter 73, Statutes of Ontario.

## **Inter-Parliamentary Conference and Juvenile Employment**

The Inter-parliamentary Conference, at its 30th session, held last September, expressed satisfaction that the question of the unemployment of young persons had been placed on the agenda of the next session of the International Labour Conference at Geneva. A resolution was adopted recommending that the age limit for compulsory school attendance should be raised so as to keep young people as much as possible off the labour market. Training courses should be organized for those who have concluded their compulsory period. "Such courses should as far as possible be organized within the framework of existing institutions and should be incorporated in their general program in such a way that the young unemployed should mingle with other young people and should not regard themselves as a class apart. It is no less indispensable that the employment of leisure time should be regularly organized in such a way as to ensure the physical and moral well-being of young people. In order to obtain

this result, no instructive pastime should be neglected, as for example rambles combined with talks, excursions, visits to factories, workshops, works, museums."

"Official employment agencies," the resolution suggests, "must have a special department for young people which shall keep in constant touch with the schools and educational authorities. In large centres it would be desirable that this special department should dispose of one or several workshops in which the capacities of the young people could be tested. This department would also be entrusted with the duty of following up young persons for whom work has been found, since a certain measure of supervision would serve to strengthen the bonds between young persons and the department and thus to give the former lasting support. The 30th Inter-Parliamentary Conference recommends that young persons should be brought up to entertain feelings of national brotherhood and international solidarity."

## COMBINES INVESTIGATION ACT

### Further Convictions in Quebec Coal Combine Prosecutions

**P**ROSECUTIONS under the Combines Investigation Act which have been before the courts of the province of Quebec since July, 1933, were concluded last month when judgment was delivered on January 23 finding the remaining five accused firms to be guilty of participation in operations of a combine of importers of British anthracite coal.

The firms convicted and fines imposed by Mr. Justice Laliberté in Court of King's Bench on January 23, 1935, were the following:

Scotch Anthracite Coal Company, Limited.....	\$5,000
Hartt and Adair Coal Company, Limited .....	5,000
Montreal Coke and Manufacturing Company, Limited.....	2,000
Mongeau and Robert, Limitee...	1,000
Elias Rogers Company, Limited.	500

The eleven companies indicted in 1933, following an investigation by the Registrar under the Combines Investigation Act into an alleged combine in the importation and distribution of British anthracite coal, were tried in two groups. The trial of the above second group was deferred until judgment was delivered in October, 1934, dismissing the appeal of the first group against their conviction. On October 29, 1934, the trial of the second group was opened before Mr. Justice Laliberté in the Court of King's Bench at Quebec City. The case was concluded at the middle of the following month, when judgment was reserved. The prosecutions were conducted under the Attorney General of Quebec by Louis S. St. Laurent, K.C., assisted by Andre Taschereau, K.C., and Valmore Bienvenue, K.C. Counsel for the defendants were as follows: L. A. Forsyth, K.C., for Scotch Anthracite Coal Company; Hazen Hansard, for Hartt and Adair Coal Company; Hector Perrier, K.C., for Mongeau and Robert, Limitee; Antoine Rivard, K.C., for Montreal Coke and Manufacturing Company; and Leon Garneau, K.C., for the Elias Rogers Company.

The accused were tried and found guilty on the same four charges as those under which the preceding five members of the combine had been convicted, two counts being under the Combines Investigation Act, one count under clause (a) of section 498 of the Criminal Code and the fourth count under clause (d) of the same section of the Code.

#### Findings of Court

After referring to his judgment of December 12, 1933, at the trial of the first group, consisting of the Canadian Import Company,

Limited, and five related companies, one of which was acquitted, Mr. Justice Laliberté in his present judgment, written in French, stated:

"The Appeal Court found the accused of the first group guilty of having formed an illegal combine with a view to limiting to a few the supply and distribution of European coal and coke, to prevent or unduly lessen competition, and that said combine had been formed and maintained by a series of agreements or combinations also illegal, namely, the basic agreements, the arrangements made for the purpose of preventing others than certain of the accused from being supplied with Welsh coal, of preventing competition from Russian and German coal and British coke, and also of maintaining an arbitrary structure of prices in both the wholesale and retail trades."

The Court, following a review of the participation or non-participation of each of the accused in each of the above matters, and a statement of reasons for decisions made as to the admissibility of certain evidence, stated in conclusion:

"If the Scotch Anthracite and Hartt and Adair companies were not parties to the basic agreements which permitted the establishment of a combine, nevertheless they gave constant support to the accused of the first group. They took every opportunity offered to assist in preventing or lessening competition and to maintain a price structure, either in the retail or the wholesale trade. Due to certain circumstances, Hartt and Adair participated in one more illegal arrangement than the Scotch Anthracite Company, namely, that for preventing certain local independent companies from securing supplies of Welsh coal, but I consider the Scotch Anthracite Company's responsibility for the maintenance of the combine at least as great as that of Hartt and Adair. Scotch Anthracite had an assured source of supply and its financial position gave it greater independence, whereas Hartt and Adair was frequently led to strive with a view to self-preservation and survival.

"Taking into account the particular circumstances of each of these companies and the arrangements to which they were party, I impose upon the Scotch Anthracite Coal Company, Limited, and the Hartt and Adair Coal Company, Limited, a penalty of \$5,000 each.

"As for the other accused, they are not guilty to the same extent. The Montreal Coke and Manufacturing Company, Limited, is connected with the accused of the first group and with Scotch Anthracite and Hartt and Adair by only one particular arrangement, the one providing for prevention of competition from British coke. This arrangement was a collateral one and for a period of one season only. On the other hand, this accused firm had an outstanding part in this arrangement and was the initiator, and I consider I should impose upon it a penalty of \$2,000.

"The Mongeau and Robert and the Elias Rogers companies suffered as a result of the activities of the combine, especially when they tried to secure by themselves a supply of coal on the British market. They were in favour

of greater competition in the import business, as indicated particularly by Mr. Alfred Rogers' letter to Mr. Szarvassy, the president of Amalgamated Anthracite Collieries, Limited. In my opinion, it was only in regard to the retail trade that these accused finally gave certain co-accused assurance of their co-operation and made illegal promises and arrangements. We are not concerned with knowing whether these engagements were always respected; to be completely innocent they had but to make no such engagements. As to the Elias Rogers Company, it appears that it was only in 1932 that it promised its co-operation, and as it retired from the Montreal market in 1934, after considerable losses, I believe a comparatively small penalty should be imposed in its case. I therefore impose upon the Elias Rogers Company, Limited, a penalty of \$500.00, and upon Mongeau and Robert, Limited, a penalty of \$1,000, considering that it gave its adherence or pretended adherence during a much longer period of time.

"I wish to repeat here, as in the case of the first group of accused, that these penalties are not imposed because the accused exploited the consuming public by increasing prices unreasonably during the period covered by the indictment, as this would have justified imposing heavier penalties. On the evidence received, I cannot come to such a conclusion. It is certain that even while selling at the fixed prices some of the accused, namely, the Weaver, Hartt and Adair and Elias Rogers companies, carried on their business in European coal without profit or at a loss.

"The accused have been and are now condemned because they were parties to a con-

spiracy to eliminate or unduly lessen competition, competition which is considered in itself to be in the public interest. They pursued this object by means of one or several of the above mentioned arrangements, but each was not party to every one of these arrangements. Their participation in the general combine is far from being in the same degree, and this is the reason for disparity in the penalties imposed."

### Privy Council Hearing Sought

In October, 1934, it was reported, and later officially announced, that the Canadian Import Company and related firms, comprising the first group convicted in the Quebec coal combine cases, would apply to the Judicial Committee of the Privy Council for special leave to appeal to that body against their conviction. The petition involves the constitutionality of an amendment to the Criminal Code in 1933 by which, under authority conferred by the Statute of Westminster, the Dominion Parliament abolished the privilege of appealing to the Privy Council in criminal matters. It is expected that the application will be heard by the Privy Council in March, and that it will be opposed by counsel for the Dominion Government and counsel for the Attorney General of the province of Quebec.

## GOVERNMENT EMPLOYEES' COMPENSATION ACT

### Annual Report for the Fiscal Year ending March 31, 1934

THE annual report of the Department of Railways and Canals contains a statistical review of the administration of the Government Employees Compensation Act for the fiscal year ending March 31, 1934. It is explained that in the interests of economy this legislation, which covers all departments of the federal government service, is administered by the Department of Railways and Canals, which Department is most largely concerned owing to the extent of the transportation activity under its control.

The provisions of the Act, which was adopted in 1918, are as follows:—

1. (1) An employee in the service of His Majesty who is injured and the dependants of any such employee who is killed, shall be entitled to the same compensation as the employee, or as the dependant of a deceased employee, of a person other than His Majesty would, under similar circumstances, be entitled to receive under the law of the province in which the accident occurred, and the liability for and the amount of such compensation shall be determined in the same manner and by the same boards, officers or authority, as that established by the law of the provinces

for determining compensation in similar cases, or by such other board, officers or authority or by such court as the Governor in Council shall from time to time direct.

(2) Any compensation awarded to any employee or the dependants of any deceased employee of His Majesty by any board, officer or authority, or by any court under the authority of this Act, shall be paid to such employee or dependant or to such person as the board, officers, or authority or the court may direct, and the said board, officer, authority and court shall have the same jurisdiction to award costs as in cases between private parties is conferred by the law of the province where the accident occurred.

In 1925, the Act, was amended so as to provide that compensation should include medical and hospital expenses, the new section being retroactive in its operation to May 24, 1918.

Since the Act became effective in 1918-19, a cumulative total of \$3,860,727.96 has been expended in compensation, medical aid and pensions while in the same period the administrative costs were \$297,259.40. During 1933-34 the disbursements in compensation exclusive

of the Canadian National Railways, totalled \$172,874.73. This amount was paid out for a total of 1,539 claims of which 487 were for compensation and medical aid, and 809 for medical aid only. In the previous year, \$186,857.23 was disbursed for a total of 1,791 claims. The reduction in claims and compensation expenditure in recent years was attributed to decreases in departmental staffs. It is also stated that "a tendency to present questionable claims is still in evidence, aggravated no doubt by shortage of employment." Those administering the Act suggest the advisability of competent medical inspection prior to engagement of all government employees, more especially those engaged under emergency relief and associated programs of work.

Exclusive of the Canadian National Railways, the Departments having a large number of claims and large compensation expenditures in 1933-34 were:—

Public Works—242 claims, totalling \$39,582.57.

Railways and Canals (Canals)—298 claims, totalling \$35,668.46.

Interior—244 claims, totalling \$23,414.75.

Marine—197 claims, totalling \$17,365.56.

Post Office—270 claims, totalling \$12,239.35.

Hudson Bay Railway—45 claims, totalling \$8,843.92.

National Defence—66 claims, totalling \$6,464.33.

The accompanying table indicates the compensation payments under the Act, by provinces during the year ended March 31, 1934.

Provincial Board	Disbursements	
	Compensation Pension, etc.	Proportion of Administration expenses
	\$ cts.	\$ cts.
Nova Scotia.....	12,779 93	5,417 33
New Brunswick.....	7,501 39	8,061 89
Ontario.....	63,859 63	3,876 62
Manitoba.....	25,363 41	6,668 40
Saskatchewan.....	3,016 44	397 83
Alberta.....	15,640 18	1,462 50
British Columbia.....	16,878 39	988 56
Quebec Commission.....		2,702 88
Province of Prince Edward Island.....	178 02	
Province of Quebec.....	26,997 44	
Province of Ontario (medical aid).....	1,110 90	
Miscellaneous.....	446 00	16,599 98

## COLLECTIVE LABOUR AGREEMENTS EXTENSION ACT OF QUEBEC

### Agreements Recently Made Obligatory and Further Applications

RECENT proceedings under the Collective Labour Agreements Extension Act of Quebec include the extension to all employees and employers in the industry and district by Orders in Council, of agreements affecting bakers and bread distributors at Three Rivers, bakers at Quebec City, ornamental iron and bronze workers at Quebec City; of changes to the Orders in Council already passed affecting shoe workers throughout the province, building trades at Quebec City, building trades at Montreal; applications for the extension of agreements covering quarrymen (other than granite and marble quarrymen) throughout the Province, bakers at Sherbrooke and building trades in Hull and district; application for a change in the Order in Council already approved covering bricklayers and plasterers at Three Rivers.

Under the Collective Labour Agreements Extension Act, Quebec, the text of which was printed in the LABOUR GAZETTE, May, 1934, page 417, applications may be made to the provincial Minister of Labour by any association of employees or employers who are parties to a collective agreement, to have those terms of such agreement which concern rates, of wages and hours of labour made obligatory on all employees and employers in

the same trade or industry within the territorial jurisdiction determined by the agreement. The application is then printed in the *Quebec Official Gazette*, and during the following thirty days objections may be made to the Minister of Labour. After this delay, if the Minister of Labour deems that the provisions of the agreement "have acquired a preponderant significance and importance" that would make the establishment of these conditions advisable, an Order in Council may be passed making the terms obligatory on all employees and employers in the trade or industry in the territory included in the agreement, from the date of the publication of the Order in Council in the *Quebec Official Gazette* and for the duration of the agreement. The provisions of an agreement thus made obligatory are to govern all individual labour contracts in the specified trades and district, except that those individual contracts which are to the advantage of the employee will have effect unless expressly prohibited in the agreement. Applications for the extension of certain agreements and Orders in Council subsequently passed under this Act have been noted in the LABOUR GAZETTE each month beginning in June, 1934.

**BAKERS AND BREAD DISTRIBUTORS, THREE RIVERS AND DISTRICT.**—An Order in Council, approved December 29, 1934, makes obligatory the conditions of an agreement between certain bakeries and the National Catholic Union of Bakers and Bread Distributors of Three Rivers, Incorporated, Section No. 12. (The application for the extension of this agreement was noted in the LABOUR GAZETTE, December, 1934, page 1147. The terms of the agreement thus made obligatory are as follows:

1. **MINIMUM WAGES:** (a) Bakery owners and master-bakers employing three workmen-bakers or more, must remunerate them as follows:—

1st workman-baker.. . . .	\$22 00	per week
2nd workman-baker.. . . .	18 00	"
3rd workman-baker and following.. . . .	15 00	"

(b) Bakery owners and master-bakers employing less than three workmen-bakers must remunerate them as follows:—

1st workman-baker.. . . .	\$18 00	per week
2nd workman-baker.. . . .	15 00	"

Bakeries must never bake more, per week, than 30 bags of flour per each workman-baker employed. Exception is made for La Boulangerie Moderne and Boulangerie St-Denis and any other bakery which may be equipped with special machinery; in such exceptional cases, the maximum bakery per week shall be 40 bags of flour per each workman-baker.

(c) Bakeries baking less than 25 bags per week, must remunerate workman-bakers as follows:—

Baking of 20 to 24 bags per week:—

Wages of workmen-bakers. \$18 00 per week  
Baking of less than 20 bags per week:

Wages of workmen-bakers. 0 75 per bag

**NOTE.**—In the event of a bakery exceeding the hereinabove fixed maximum baking of 30 and 40 bags per week, and per workman-baker, the remuneration of the workman-baker will be \$0.65 per each supplementary bag.

(d) The apprentices' wages will be fixed by the joint committee provided by the Act.

(e) Bread Distributors' wages:

From the 1st of December, 1934, to 31st of May, 1935, the bread distributors' wages will be \$9 per week, plus a commission of 5 per cent on the money collected.

From the 1st of June, 1935 to the 30th of November, 1936, the bread distributors' wages will be \$9 per week, plus a commission of 7 per cent on the money collected.

The bread distributors shall not be responsible for the collection of money.

II.—The wages of the workmen-bakers, bread distributors and apprentices will be paid every week.

III.—The territorial jurisdiction determined by the present agreement comprises the towns of Trois-Rivières, Cap de la Madeleine and Pointe du Lac, and, on the North side of the river, a distance of 15 miles from the limits of the town of Trois Rivières.

It comprises also the County of Nicolet; however, in said county, those bakeries, only, selling directly or indirectly the whole or part of their production within the limits of the territorial

jurisdiction designated in the preceding paragraph, are subjected to the provisions of the agreement.

IV.—The present agreement shall be valid from the date of the publication in the *Quebec Official Gazette* of the Order in Council approving the present request and shall remain in force until the 1st of December, 1935. It shall then renew itself automatically each year, unless a notice of thirty days be given before the expiration of this term, by one of the contracting parties to the other, that he desires to have the same modified or repealed.

**BAKERS, QUEBEC CITY AND DISTRICT.**—An Order in Council, approved January 5, 1935, makes obligatory the conditions of an agreement between certain bakeries and the National Catholic Union of Bakers of Quebec, the application for which was noted in the LABOUR GAZETTE, December, page 1147. The terms of the agreement thus made obligatory are as follows:

1. The minimum wages of the foreman shall be (\$22) twenty-two dollars per week and that of the 2nd baker shall be (\$19) nineteen dollars per week, when the baking reaches the proportion of 30 bags of flour per man per week. It is understood that the minimum wages of (\$22) twenty-two dollars for the foreman and of (\$19) nineteen dollars for the journeyman baker shall not be lower unless less than 55 bags of flour be baked per week.

The basis agreed upon for the fixing of wages in ordinary conditions is \$3.50 for 300 two-pound loaves.

2. The wages of the temporary workmen shall be (\$3.50) three dollars and fifty cents per day.

3. When more than a proportion of 30 bags of flour per man are baked, the surplus, for each bag, will be paid (\$0.65) sixty-five cents. In bakeries where the minimum wages is not paid because the quantity of bags per man is not baked, the wages of journeymen shall not be less than (\$3) per week from that of the foreman.

4. Apprentices shall be paid as follows:

	Per week
First year.. . . .	\$ 6 00
Second year.. . . .	8 00
Third year.. . . .	10 00

5. Duration of labour:

The duration of labour shall be (72) seventy-two hours per week.

Any extra work shall be paid at the rate of time and a half the regular wage.

6. The rate of wages mentioned in articles 1, 2, 3, 4, 5 and 7 shall not come into effect until an Order in Council has been passed by the Lieutenant Governor of Quebec, ordering that the contract applies to and binds the master-bakers and journeymen bakers mentioned in the present contract. Should an Order in Council be passed, this Order in Council shall become obligatory for all the interested parties of the industry concerned in this agreement.

7. The territorial jurisdiction determined by the present agreement comprises the judicial district of Quebec. Outside the city of Quebec, of the city of Lévis and of a distance of 15 miles from their limits, in the same district of Quebec,

the rates of wages fixed by articles 1, 2, 3, 4, 5 may be reduced by 15 per cent.

#### 8. Duration of the contract:

The present agreement shall remain in force until the first of November, 1935, and shall be renewed automatically unless previous notice of thirty days be given.

**ORNAMENTAL IRON AND BRONZE WORKERS, QUEBEC CITY.**—An Order in Council dated January 16, 1935, makes obligatory the conditions of an agreement between certain proprietors of machine shops for ornamental iron and bronze work and the Ornamental Iron and Bronze Workers Union of Quebec, the application for which was noted in the *LABOUR GAZETTE*, January, page 27. The terms of the agreement thus made obligatory are as follows:

1. *Salaries:* The following minimum rate of wages will be obligatory and paid in the hereinafter specified trades in machine shops:

	Per hour
A.—Mechanics in ornamental iron and bronze . . . . .	\$0.50
B.—Adjusters in ornamental iron and bronze . . . . .	0.40
C.—Helpers in ornamental iron and bronze . . . . .	0.30

The rate of wages mentioned in the preceding paragraph shall have no effect until an Order in Council has been passed by the Lieutenant-Governor of Quebec ordering that the said contract shall apply and bind the employers and employees of the machine shops mentioned in the present contract. In the event of the said Order in Council, the same shall be obligatory for all the interested parties of the trades mentioned in the said Agreement.

2. *Time of Labour:* The hours of labour shall be 9 hours per day and 50 hours per week: The time of labour shall be from 7 o'clock in the morning until noon and from 1 o'clock in the afternoon until 5 o'clock P.M. with the exception of Saturday when there shall be no work in the afternoon. Overtime work shall be paid at the rate of time and a half according to regular wages. Double time will be paid for work executed on legal holidays and from midnight until 7 o'clock a.m. on ordinary working days.

3. It is expressly stipulated that contracts given and signed before the adoption of the Order in Council approving this request, shall not be subject to the provisions of the present Agreement.

4. *Territorial Jurisdiction:* The territorial jurisdiction for the purpose of the application of the present agreement includes the judicial districts of Quebec, Beauce, Montmagny. In the judicial districts of Beauce and Montmagny, the schedule of wages fixed by article 2 may, however, be reduced 15 per cent.

The present Agreement shall come into force on the day of its signing and shall remain in force until the 31st of December, 1935. It shall renew itself automatically from year to year unless one of the parties hereto shall notify the other party before the first of December of each year, of its intention to revoke or modify same.

**SHOE WORKERS, PROVINCE OF QUEBEC.**—An Order in Council, dated January 23, 1935, amends the previous Order in Council governing wages in this industry (the terms of which were printed in the *LABOUR GAZETTE*, September, 1934, page 825) by the addition of a list of operations to each of the four classes A, B, C and D, and by the further addition after Class D in the original agreement of the following:—

"The Joint Committee may, if necessary, complete the classification of similar and supplementary operations not mentioned in classes A, B, C, and D. In all cases, the employers to which these regulations apply will be advised by the Joint Committee, of such similar or supplementary classifications within eight days.

"The said classifications shall then have the same force and effect as if mentioned in the Order in Council."

**Building Trades, Quebec City of district.**—The terms of the Order in Council governing wages in this industry were published in the *LABOUR GAZETTE*, September, 1934, page 823. The new Order in Council dated January 17, 1935, provides for the addition of the following paragraph following Article 5 of the first order in Council:

"5A.—It is expressly stipulated that building contracts for which tenders have been called before the adoption of the Order in Council approving this request, are not subject to the provisions of the present agreement."

**BUILDING TRADES, MONTREAL AND DISTRICT.**—The terms of the application for extension of this agreement, which was later made obligatory by Order in Council, were printed in the *LABOUR GAZETTE*, July, 1934, page 637. This Order in Council has now been amended by the substitution of the words "hoisting engineer" to replace the words "stationary engine men" which were in the original agreement.

**QUARRYMEN AND CUT STONE WORKERS (OTHER THAN GRANITE AND MARBLE) PROVINCE OF QUEBEC.**—An application for the extension of an agreement between certain owners of quarries and cut stone plants operating in limestone, sand-stone, artificial stone and all stone other than granite and marble, and their employees was printed in the *Quebec Official Gazette*, February 2, 1935. The agreement provides for wage rates of 50 cents per hour for stonecutters, from 15 to 40 cents per hour for apprentice stonecutters, 40 cents for planermen, 20 and 30 cents for apprentice planermen and 35 cents for sawyer men.

**BAKERS, SHERBROOKE.**—Application for the extension of an agreement between the Association of Master Bakers of the District of St. Francis and the Central Council of National Catholic Unions of Sherbrooke was printed in the *Quebec Official Gazette*, January 5. The agreement provides for minimum rates of from \$13 to \$17 per week for bakers and of not less than \$6 for apprentices.

**BUILDING TRADES, HULL AND DISTRICT.**—Application for the extension of an agreement between certain general contractors of Hull and the Council of Building Trades (National Catholic Unions) of the Ottawa district was printed in the *Quebec Official Gazette*, January 5. The minimum hourly wage rates provided in the agreement for the city of Hull and within 10 miles of its limits are: 90 cents for bricklayers and masons, 70 cents for plasterers, 65 cents for carpenters and joiners and for stationary and mechanics enginemen, 50 cents for drillers, 45 cents for mortar makers and celanite mixers, plaster pourers and hod

carriers, and 40 cents for common labourers and helpers. For the rest of the district the wage rates are 5 cents per hour less than the above, except for bricklayers and masons for whom it is 10 cents per hour less.

**BRICKLAYERS AND PLASTERERS, THREE RIVERS.**—The terms of the Order in Council covering these trades was printed in the *LABOUR GAZETTE*, October, 1934, page 912. An application for the addition of a further clause providing for wage rates of from 15 to 35 cents per hour for apprentices was printed in the *Quebec Official Gazette*, January 5.

## WEEKLY DAY OF REST ACT OF THE PROVINCE OF QUEBEC

### Revised Regulations Governing Employees in Hotels and Restaurants

**R**EVISED regulations under the Act to provide for One Day of Rest in each Week for Employees of certain Industries were published in the *Quebec Official Gazette*, January 26, 1935. This legislation was first adopted in 1918. It applies to hotel, restaurant and club employees.

The text of the new regulations is as follows:

#### REGULATIONS

1. Hotel or restaurant and club employees to which the present regulations apply, are the persons who work inside or in the dependencies of the hereinabove mentioned establishments, either in the office or as accountants.

2. Shall have one day of rest of twenty-four consecutive hours per week: the cooks and their helpers, those occupied with all kinds of cleaning, messengers, waiters and waitresses, elevator-boys, chambermaids, pages, baggage-men and any other employees of either sex designated by the inspector.

3. Notwithstanding Article 2 of the present regulation, hotels, restaurants or clubs employing but one cook, may replace a day of rest of twenty-four consecutive hours, by two holidays of twelve consecutive hours each, to be taken during one and the same week.

4. Office employees of both sexes, in the establishments coming under Article 1 of the present regulations, must be assured of a rest of 12 consecutive hours of each 24 hours.

5. No employee may spend his day off in replacing another employee in another establishment and any proprietor or manager, who employs a substitute under these conditions, knowing that the said individual is profiting by his holiday, to replace an employee, is liable to the fine prescribed in Article 5 of the said Act.

6. All inspectors of industrial and commercial establishments, are authorized to visit, at any time, the establishments, coming under the present regulations, for the purpose of verifying the application of the present regulations, as often as they may deem necessary. Proprietors must furnish them any information requested.

7. The employees of both sexes in the establishments coming under the present regulations

should not do more than twelve consecutive hours of work per twenty-four hours.

8. In the establishments coming under the present regulations a box containing remedies, bandages and other articles necessary for first-aid, while awaiting the doctor, should be kept in a place of easy access.

9. The present regulations do not apply to hotels, restaurants or clubs employing less than five persons, provided that such establishments be situate in municipalities of less than 3,000 souls.

10. All regulations adopted previous to the present regulations, are revoked.

Last April the Royal Inland Hospital at Kamloops, British Columbia, formed a hospital insurance scheme, under which those participating pay one dollar a month and receive free hospital treatment when they are ill. At the beginning of December, 1,200 residents of Kamloops and vicinity had joined the scheme. They are entitled to treatment for three months in any one year in the public ward, and to the benefit of the operating room, the X-Ray machine, laboratory work and stock medicines. Alcoholic, chronic, and venereal disease patients are not eligible for treatment under the scheme.

At a conference of Ontario mayors, held in Hamilton on October 17 and 18, the following resolution was passed calling for a minimum wage for men: "Whereas the determining of a minimum wage for men would prove of immense advantage and eliminate the possibility of subsidizing industry through welfare appropriations: Be it therefore resolved that this Conference forward a resolution to the Federal Government congratulating the Governor in Council for the study they are making of this national problem, and expressing the hope that in the near future legislation will be enacted to provide for a minimum wage for men according to their respective vocations and classifications."

## MINIMUM WAGES FOR WOMEN IN SASKATCHEWAN

### Revised Orders Governing Female Employees in Various Industries

THE Minimum Wage Board of Saskatchewan, at a meeting held on January 11, 1935, approved and passed the following new orders, to become effective on February 4. The orders previously in effect were published in the LABOUR GAZETTE, October, 1933, page 996. By the new Orders the minimum wages of experienced employees are reduced by \$1 per week in the occupations covered by Orders No. 1, 2, 4 and 5, and by 50 cents in those coming under Order No. 3. Corresponding reductions are made in the new rates for learners and minors.

ORDER No. 1.—*Governing employment of females in shops and stores in cities of the Province.*

#### 1. Hours:

(a) No person, firm or corporation shall employ a female or suffer or permit a female to be employed in any shop or store in the cities of Moose Jaw, Regina and Saskatoon for a greater number of hours than forty-nine in any one week, or in the cities of North Battleford, Prince Albert, Swift Current, Weyburn and Yorkton for a greater number of hours than fifty-one in any one week, unless a special permit in writing has been obtained from the secretary of the Board:

Provided that during the period commencing on December 15th and ending on December 31st a female may be employed, without a special permit, for any number of hours not exceeding fifty-six in any one week.

(b) When a statutory holiday occurs in any week the working hours for that week shall be reduced from forty-nine or fifty-one or the number allowed by special permit, as the case may be, by the number of working hours during which the establishment is closed for business on such holiday.

#### 2. Wages:

(a) Experienced Workers: No person, firm or corporation shall employ an experienced female or suffer or permit an experienced female to be employed in a shop or store at a rate of wages less than \$14.00 per week.

(b) Adult Learners: Adult learners shall be paid not less than \$9.00 per week for the first six months, not less than \$11.00 per week for the second six months, and not less than \$12.50 per week for the third six months, and thereafter shall be considered experienced workers and shall be paid not less than the minimum rate prescribed for experienced workers.

(c) Minor Learners: Girls under eighteen years of age may be employed as minor learners and shall be paid not less than \$6.00 per week for the first six months and not less than \$7.00 per week for the next six months, and thereafter shall be considered adult learners and shall be paid on the scale set out above for adult learners. Minor learners shall be considered adult learners upon reaching the age of eighteen years.

(d) Millinery, Dressmaking, Tailoring, Fur Sewing, and Florist Establishments:

Excepting the provisions of sub-clauses (b) and (c) of this clause, this Order shall apply to millinery, dressmaking, tailoring, fur sewing and florist establishments situated in a shop or store. An adult learner shall be paid at a rate of not less than \$3.00 per week for a period of six months, at a rate of not less than \$6.00 per week for the next six months, and at a rate of not less than \$7.00 per week for the next six months, and thereafter shall be considered to be an experienced worker and shall be paid not less than the minimum rate prescribed for experienced workers. A probationary period of six months for which no wages are stipulated is allowed in the case of minor learners after which a minor learner shall be paid at the rate of wages set out above for adult learners.

(e) Overtime: Wages at not less than the minimum rate applicable shall be paid to employees, whether experienced or inexperienced, for all time worked beyond the maximum number of hours provided for by this Order.

(f) Part Time Workers: When a female, whether experienced or inexperienced, is employed for a less number of hours in any one week than that provided for by this Order, the minimum wage above set forth may be proportionately reduced, provided that in no case shall the rate be less than twenty (20) cents per hour, and provided further that the period of employment shall not be less than three consecutive hours.

(g) Holidays: No reduction for statutory holidays shall be made from the minimum wage.

(h) Meals: Where meals are furnished and charged for by the employer, and accepted by the employee, the price shall not exceed twenty (20) cents per meal.

(i) Method of Payment: Wages shall be paid promptly at regular intervals in cash or by certified cheque, and no earning period shall be longer than one month.

#### 3. Seats:

Seats shall be provided in the proportion of at least one seat for every four female employees or fraction thereof.

#### 4. Certificate of Experience:

An employee when leaving her employment shall, on demand, be given a certificate showing her length of time and experience in that employment.

#### 5. Notice:

No employer shall discharge an employee who has been in his service continuously for six months or more without having given her at least one week's written notice of the termination of her employment; but this clause shall not apply to the discharge of an employee for any of the causes set forth in section 3 of The Masters and Servants Act.

#### 6. Register:

Every employer shall keep in each shop or factory a register of the names and addresses and the working hours and the actual earnings of all his employees working therein, and shall on request permit any member or representative of the Board to inspect and examine the same.

### 7. Posting of Order:

Every employer of female labour in a shop or store shall keep a copy of this Order posted in such a position that it can be easily read by female employees.

### 8. Penalty:

An employer who violates any of the provisions of this order is punishable by fine and in default by imprisonment. (See The Minimum Wage Act.)

### 9. Commencement of Order:

This order shall come into force on the fourth day of February, 1935, and shall supersede all other orders of the Board respecting shops and stores.

## ORDER No 2.—*Governing employment of females in laundries and factories in cities of the Province.*

### 1. Hours:

(a) No person, firm or corporation shall employ a female or suffer or permit a female to be employed in any laundry or factory for more than forty-eight hours in any one week; and the hours of working in any one day shall not be later than half-past six o'clock in the afternoon unless a special permit in writing has been obtained from an inspector under The Factories Act. (See The Factories Act, section 11 (1)).

(b) When a statutory holiday occurs in any week the working hours for that week shall be reduced from forty-eight by the number of working hours during which the establishment is closed for business on such holiday.

### 2. Wages:

(a) Experienced Workers: No person, firm or corporation shall employ an experienced female or suffer or permit an experienced female to be employed in a laundry or factory at a rate of wages less than \$13.00 per week.

(b) Learners: Learners shall be paid not less than \$9.00 per week for the first six months and not less than \$11.50 per week for the second six months, and thereafter shall be considered experienced workers and shall be paid not less than the minimum rate prescribed for experienced workers.

(c) Photographic Studios: Female apprentices in photographic studios and workrooms in connection therewith, other than those wholly employed in film developing shall be paid wages at a rate not less than \$5.00 per week for a period of three months and for the twelve months following shall be paid the rate of wages specified in sub-clause (b) for learners.

(d) Kitting, hat and wearing apparel manufacturers and book binders:

Learners in knitting hat and wearing apparel manufactories and book binderies shall be paid wages at a rate not less than \$7.50 per week for a period of six months and for the twelve months following shall be paid the rate of wages specified in sub-clause (b) for learners.

(e) Overtime: Wages at not less than the minimum rate applicable shall be paid to employees, whether experienced or inexperienced, for all time worked beyond the maximum number of hours provided for by this Order.

(f) Part Time Workers: When a female, whether experienced or inexperienced, is employed for a less number of hours in any one

week than that provided for by this Order, the minimum wage may be proportionately reduced, provided that in no case shall the rate be less than twenty (20) cents per hour.

(g) Holidays: No reduction for statutory holidays shall be made from the minimum wage.

(h) Meals: Where meals are furnished and charged for by the employer, and accepted by the employee, the price shall not exceed twenty (20) cents per meal.

(i) Method of Payment: Wages shall be paid promptly at regular intervals in cash or by certified cheque and no earning period shall be longer than one month.

(The remaining sections are as in Order No. 1.)

## ORDER No 3.—*Governing employment of females in mail order houses in the cities of the Province.*

### 1. Hours:

(a) No person, firm or corporation shall employ a female or suffer or permit a female to be employed in any mail order house for a greater number of hours than forty-eight in any one week, unless a special permit in writing has been obtained from the secretary of the Board.

(b) When a statutory holiday occurs in any week the working hours for that week shall be reduced from forty-eight by the number of working hours during which the establishment is closed for business on such holiday.

### 2. Wages:

(a) Experienced Workers: No person, firm or corporation shall employ an experienced female or suffer or permit an experienced female to be employed in any mail order house at a rate of wages less than \$13.50 per week.

(b) Adult Learners: Adult learners shall be paid not less than \$9.00 per week for the first six months and not less than \$11.00 per week for the second six months, and thereafter shall be considered experienced workers and shall be paid not less than the minimum rate prescribed for experienced workers.

(c) Minor Learners: Girls under eighteen years of age may be employed as minor learners and shall be paid not less than \$6.00 per week for the first six months and not less than \$7.00 per week for the next six months, and thereafter shall be considered adult learners and shall be paid on the scale set out above for adult learners. Minor learners shall be considered adult learners upon reaching the age of eighteen years.

(d) Overtime: Wages at not less than the minimum rate applicable shall be paid to employees, whether experienced or inexperienced, for all time worked beyond the maximum number of hours provided for by this Order.

(e) Part Time Workers: When a female, whether experienced or inexperienced, is employed for a less number of hours in any one week than that provided for by this Order, the minimum wage may be proportionately reduced, provided that in no case shall the rate be less than twenty (20) cents per hour.

(f) Holidays: No reduction for statutory holidays shall be made from the minimum wage.

(g) Meals: Where meals are furnished and charged for by the employer, and accepted by the employee, the price shall not exceed twenty (20) cents per meal.

(h) Method of Payment: Wages shall be paid promptly at regular intervals, in cash or by certified cheque and no earning period shall be longer than one month.

(The remaining sections are as in Order No. 1.)

ORDER No. 4.—*Governing employment of females in hotels, restaurants and refreshment rooms in cities of the Province.*

1. Hours:

(a) No person, firm or corporation shall employ a female or suffer or permit a female to be employed in any hotel, restaurant or refreshment room or in more than one establishment of that class for a greater number or combined number of hours than forty-nine in any one week, unless a special permit in writing has been obtained from the secretary of the Board.

(b) Twenty minutes uninterrupted time shall be allowed for each meal where meals are provided as part of remuneration.

2. Wages:

(a) Experienced Workers: No person, firm or corporation shall employ an experienced female or suffer or permit an experienced female to be employed, in any hotel, restaurant or refreshment room at a rate of wages less than \$12.00 per week (\$52.00 per month) except as a kitchen help, in which cases the rate of wages shall not be less than \$10.00 per week (\$43.00 per month).

(b) Learners: Except in the case of kitchen employees, the rate of wages for learners may be less than the minimum rate prescribed for experienced workers; provided that learners shall be paid not less than \$10.00 per week (\$45.00 per month) for the first three months of employment and thereafter shall be considered experienced workers and shall be paid not less than the minimum rate prescribed for experienced workers.

(c) Minors: No female under sixteen years of age shall be employed.

(d) Overtime: Wages at not less than the minimum rate applicable shall be paid to employees, whether experienced or inexperienced, for all time worked beyond the maximum number of hours provided for by this Order.

(e) Part Time: When a female, whether experienced or inexperienced, is employed for a less number of hours than forty-nine in any one week, the minimum wages above set forth may be proportionately reduced.

(f) Method of Payment: Wages shall be paid promptly at regular intervals in cash or by certified cheque and no earning period shall be longer than one month.

3. Board and Lodging:

(a) Where twenty-one meals per week and seven days lodging per week are furnished and charged for by the employer, and accepted by the employee as part payment of wages, the minimum rate of wages shall be \$5.00 per week (\$21.00 per month) for experienced workers and \$4.00 per week (\$17.00 per month) for inexperienced employees and \$3.00 per week (\$13.00 per month) for kitchen employees.

(b) Where meals only are furnished and charged for by the employer, and accepted by the employee, the minimum rate of wages shall be \$7.00 per week (\$30.00 per month) for experienced workers and \$6.00 per week (\$26.00 per month) for inexperienced employees, and \$5.00 per week (\$21.00 per month) for kitchen employees.

(c) Where lodging only is furnished and charged for by the employer and accepted by the employee, the minimum rate of wages for experienced workers shall be \$9.00 per week (\$39.00 per month) and \$8.00 per week, (\$34.00 per month) for inexperienced employees and \$7.00 per week (\$30.00 per month) for kitchen employees.

(d) Where less than twenty-one meals or seven days lodging are furnished in any week, the minimum rate of wages for that week shall be the minimum rate applicable under this clause, plus a sum amounting to not less than twenty cents for each meal and thirty cents for each day's lodging which is not furnished.

(The remaining sections are as in Order No. 1.)

ORDER No. 5.—*Governing employment of females in beauty parlours and barber shops in cities of the province.*

1. Hours:

(a) No person, firm or corporation shall employ a female or suffer or permit a female to be employed in any beauty parlour or barber shop for a greater number of hours than forty-eight in any one week unless a special permit in writing has been obtained from the Secretary of the Board.

(b) Where a statutory holiday occurs in any week the working hours for that week shall be reduced from forty-eight by the number of working hours during which the establishment is closed for business on such holiday.

2. Wages:

(a) Experienced Workers: No person, firm or corporation shall employ an experienced female or suffer or permit an experienced female to be employed in a beauty parlour or barber shop at a rate of wages less than \$14.00 per week.

(b) Learners: There shall be a probationary period of three months for which no wages are payable, after which the employee shall be paid not less than \$5.00 per week for the first six months; not less than \$9.00 per week for the second six months; not less than \$10.50 per week for the third six months and not less than \$12.00 per week for the fourth six months, and thereafter shall be considered an experienced worker and shall be paid not less than the minimum rate prescribed for experienced workers.

Any time served by the learner under tuition shall be deemed to be part of the probationary period.

(c) Apprentices: No employer shall employ or permit to be employed as apprentices in any class of employment in any establishment more than twenty-five per cent of the total number of female employees in that class of employment in that establishment, excepting when the total number of employees is less than four, in which case one apprentice may be employed.

(d) Overtime: Wages at not less than minimum rate applicable shall be paid to employees, whether experienced or inexperienced, for all time worked beyond the maximum number of hours provided for by this Order.

(e) Part Time Workers: When a female, whether experienced or inexperienced, is employed for a less number of hours in any one week than that provided for by this Order, the minimum wage may be proportionately reduced, provided that in no case shall the rate be less than twenty (20) cents per hour.

(f) Holidays: No reduction for statutory holidays shall be made from the minimum wage.

(g) Meals: Where meals are furnished and charged for by the employer, and accepted by the employee, the price shall not exceed twenty (20) cents per meal.

(h) Method of Payment: Wages shall be paid promptly at regular intervals in cash or by certified cheque and no earning period shall be longer than one month.

(The remaining sections are as in Order No. 1.)

## TRADES AND LABOUR CONGRESS OF CANADA

### Legislative Program presented to Dominion Government

THE Executive Committee of the Trades and Labour Congress of Canada, with an associate delegation of Canadian representatives of affiliated National and International Unions, presented to the Dominion Government, on February 6, a memorandum containing a program of legislation recommended by organized labour for enactment by Parliament. The delegates represented every province of Canada. The presentation was made by Tom Moore, president, R. J. Tallon, and Mayor James Simpson, of Toronto, vice-presidents of the Congress. The delegation was received by the Prime Minister, the Right Hon. R. B. Bennett, the Hon. W. A. Gordon, Minister of Labour, and nine other members of the Dominion Cabinet.

The memorandum began by expressing gratification at the announced intention of the Government to enact legislation on lines that had been recommended by the Congress in former years, and made suggestions intended to increase the benefits of the measures now proposed. The paragraphs on the subject of the relief of unemployment were as follows:—

#### Work and Relief for the Unemployed

"With more than one-tenth of the population of this Dominion still dependent upon public assistance for their maintenance, mostly as a result of unemployment and under-employment, it is apparent that steps so far taken to provide employment have been woefully inadequate.

"*Provision of Work:*—There is keen disappointment that the relief works authorized at the last session of Parliament have not been more quickly developed, especially that part of the program affecting building construction. We do most earnestly urge that all building projects authorized will be immediately proceeded with and that further action be taken at the present session of Parliament to appropriate a much larger sum than that voted last year for undertakings to provide employment. In addition to the need for erection, remodelling and repair of many public buildings in all parts of the Dominion we would suggest the time is opportune to undertake the clearing of slum areas, financing of

housing schemes and the granting of increased financial assistance for the elimination of grade railway crossings.

"A further proposal to increase employment which we again re-iterate is that the government set an example to private industry in respect to the reduction of hours of labour in conformity with the constantly increasing productivity of machinery. We look forward hopefully to the adoption of a maximum 30-hour week and, as an immediate step toward this objective, strongly urge ratification of the draft convention (1919) of the International Labour Organization providing for a maximum 8-hour day, with the additional provision of a 5-day week for all industries, and the institution by the government of a maximum 6-hour day on all government undertakings, including relief projects. It is plain that this must be accompanied by a commensurate increase in hourly or weekly wage rates sufficient to maintain previous earning power, as otherwise it would only result in adding to the number of employed persons without increasing the aggregate purchasing power of those employed.

"To restore the necessary equilibrium between production and consumption, a greater purchasing power on the part of the masses is essential, and though there are many ways in which this might be brought about, the most direct is that of putting more money in the pay envelope. In this matter also the government has a responsibility to lead, and while action taken restoring half of the salary deductions imposed upon all employees of the government, whether civil servants or temporary employees, is highly appreciated, we sincerely believe it would be in the public interest if further steps were immediately taken to restore these salaries and wages to their former levels. In regard to the temporary employees we again desire to direct attention to the injustice of imposing the statutory deduction upon these classes whose wage levels have, in most cases, already been materially reduced either by negotiation and agreement with their employers or by such having become the prevailing rate in the district where the work is being done.

"Relief camps continue to shelter some 20,000 or more of the young men of this Dominion, and without under-estimating the amount of protection which this affords for those who otherwise would be compelled to roam the country in search of work, it is apparent that a lengthy stay in such environment, where opportunity for development of a full life as a citizen cannot be provided, is not a satisfactory condition. For this reason we urge that a fair and reasonable wage be paid to those employed therein, instead of the current twenty-five cents per day allowance, thus giving opportunity to these young men to save sufficient from their earnings to quickly return to normal surroundings where they would have a chance of again becoming absorbed in the industrial life of the country.

"All work done by the government, whether classed as relief projects or otherwise, should be subject to the provisions and regulations of the Fair Wages Act of 1930.

"*Relief for the Unemployed*:—So long as need exists for the distribution of direct relief, its application and administration should be uniform throughout the Dominion. The inability of many public authorities to meet this obligation and the extent to which numbers of unemployed workers and their dependants, because of lack of residence qualifications, are often denied essential relief, urges us to press that the Federal Government should accept, as a national responsibility, the payment of direct relief to all needy workers.

"*Unemployment Insurance*:—Another and more satisfactory way of providing maintenance for the unemployed than by the payment of direct relief, continuance of relief camps, etc., is through the institution of a national plan of unemployment insurance. Last June the International Labour Organization adopted a draft convention on this subject, incorporating therein the pooled experience of other industrial countries which have this form of social insurance in effect. We recognize that the standards set out in this convention are only the minimum which should be observed and, therefore, there should be no difficulty in Canada ratifying this convention.

"The Bill now before Parliament has received the most careful study possible during the short time that it has been available for our examination. Based on the general principles respecting this matter adopted by our annual conventions for many years past and decisions reached by this delegation on Bill No. 8 entitled: 'The Employment and Social Insurance Act,' we offer the following obser-

vations and definite recommendations in respect to certain clauses. In doing so we cannot impress too strongly that we are guided solely by the desire to co-operate to the fullest extent in securing the enactment of a measure which will ultimately alleviate conditions for many now thrown entirely upon their own resources and lay the foundation for a more equitable method of providing relief during periods of unemployment without subjecting the recipients to the indignities invariably connected with the payment of direct relief."

"*Bill No. 8*:—We welcome the introduction of this measure as a fair effort to create a practical and equitable unemployment insurance plan suitable to Canada. Its enactment will make plain beyond doubt that unemployment insurance payments are neither public assistance or charity. It will, when in operation, further provide payments for a limited period to many who are now denied any assistance because they are not able to demonstrate that they have actually exhausted all their meagre resources and therefore cannot be classed as entirely destitute.

"We recognize that the machinery provided will probably take several months to build up and that to this must be added the time fixed for payments to be made before benefits are to be paid. Because of this it would seem that it will be from eighteen months to two years before any relief to the unemployed can be expected from its application.

"Again, the many classes who are exempted, coupled with those who, because of not being employed cannot participate, seriously limits the extent of its benefits. All these things emphasize the necessity of every effort being continued to provide work or to make adequate provision for maintenance to needy unemployed, as requested in a preceding part of this memorandum."

The memorandum proceeded to express the hope that the Commission would exercise, as fully and as early as possible, its power to extend the classes covered by the Act, and generally show a liberal spirit. Approval was given of the declaration in the preamble to the Act that the federal government had power, under the treaty-making power reserved to the Dominion, to give effect in Canada to the International Labour Conference convention. The sections providing for labour co-operation in administration were commended, but it was suggested that provision should be made for the compulsory filling, within a period of one month, of vacancies on administrative bodies. In reference to the provision for the retraining and rehabilitation of workers displaced through technical

changes in industrial processes it was pointed out that care should be taken to avoid training men for occupations that are already overcrowded. It was suggested that section 7 (2), in reference to "schemes of assistance" needed clarification. Full agreement was expressed with the proposals to bring the Employment Service entirely under federal administration and to establish a local committee with workers' representation thereon to assist and advise in connection with each of these offices.

It was recommended that Section 20 (3), providing for the enlargement of the first statutory condition for receiving benefits, should be enlarged to empower the Commission to extend the qualifying period to those who, because of special conditions connected with their employment, are unable to fully comply with the provisions of Subsection I and so would be unduly debarred from becoming participants in the insurance scheme.

The memorandum suggested that the provision of forty weeks' contributions in order to qualify for benefits is too long and will debar many from participation.

Appreciation was expressed of the provisions enabling unemployed workers to maintain membership in trade unions and obey their regulations without losing benefits, and also of the provision allowing for moderate supplementary earnings.

Further extension of the period of 78 days for which benefits can be received, was recommended.

The Commission should be made the final authority on doubtful cases, instead of the Exchequer Court.

The National Health section of the Act was approved, the hope being expressed that it would lead to the enactment at an early date of a national scheme of health insurance and generous Dominion aid for such matters in the interim.

In regard to contributions it was recommended that employers, because of the extent of their responsibility for employment, should be called upon to contribute more than the worker toward the unemployment insurance fund; and that the rates of contributions from employers be changed to 30 cents and from workers to 20 cents, instead of an equal 25 cents each as now stated, with proportionate changes for the other classes.

Finally, in connection with the rates of benefits, the delegation asked for an assurance, in view of the very moderate sums to be paid, that there would be no diminution from the weekly rates where only a 5-day week prevails.

## Social Insurance

On this subject the memorandum pointed out that loss of earning power often results from inability to secure or continue in employment because of old age or as a result of sickness and invalidity. Any measure aimed to assure security during such periods should be national in scope and made equally applicable to citizens in every part of Canada.

*Old Age Pensions.*—The memorandum noted that the existing legislation had brought relief to thousands of aged workers who were in need, but expressed regret that after eight years the Act was not in force in Quebec or New Brunswick. It was proposed that full responsibility for the Act should be assumed by the Federal Government; that the qualifying age should be reduced from 70 to 65 years; and that in any event, the requirement of five years' residence in a province, prior to application for a pension, should be removed.

*Sickness and Invalidity Insurance.*—It was recommended that a federal system of sickness and invalidity insurance be established, the memorandum stating that "the enormous loss sustained by inability of workers to meet the high cost of medical attention, hospital charges, etc., neglect of which increases, unnecessarily, the death rate of this country, is our reason for urging full co-operation with provincial authorities by the Federal Government and enactment of such legislation as will effectively deal with this matter."

## Industrial Control and Economic Council

The memorandum expressed the hope that legislation would be passed by Parliament at the present session to remedy the situation revealed by the Royal Commission on Price Spreads and Mass Buying, and to prevent the "continued exploitation of the human element in industry." Other suggestions under this head were as follows:—

The establishment of a National Economic Council to act as a fact finding body on all questions affecting the well being of those engaged in industry, commerce and agriculture, and to make recommendations to the proper authorities to deal with the same; collective bargaining as a necessary basis of the development of codes of fair practices in industry; the right to organize, free from employers' control; extension of Industrial Disputes Investigation Act to all tariff-protected and subsidized industries, thus providing the means whereby employees could obtain public inquiry at any time into unfair conditions of labour; stricter enforcement of minimum wage laws to prevent evasions and violations; closer co-operation between distributors and pro-

ducers to overcome the evil effects of highly seasonal occupations; amendments to the British North America Act to enable the Federal Government to enact and enforce legislation necessary to ensure Dominion-wide protection against unfair and unethical practices and to ensure uniform application of all labour laws. Legislative action was asked for also to prevent the practice of watering of stock by industrial, commercial and public utility enterprises with the end in view that dividends be permitted to be paid only on the actual capital employed by such concerns.

### British North America Act

The memorandum noted with approval that the question of the revision of the B.N.A. Act, so as to give the Dominion Government power to deal effectively with economic problems of national scope, had been referred to a Committee of the House of Commons. It was suggested that the committee consider amendments that would provide as follows:—(1) Ensure full competence of the Federal Government to enact any social and labour legislation affecting Canada as a whole, and particularly that included in the draft conventions and recommendations emanating from the regular and special sessions of the International Labour Office (League of Nations); (2) permit of control over industrial and commercial activities essential to ensuring observance of proper labour standards and eliminate unfair competition between provinces; (3) to empower the Federal authorities to effectively regulate highway transport and thus eliminate unsafe standards of operation and unfair competition with other established methods of transportation; (4) restrict powers of the Senate to veto any bill passed at two separate sessions of the House of Commons, which practice is in harmony with that of the British Parliament; (5) abolish appeals to the Privy Council.

### Banking, Interest Rates, Etc.

*Banking and Credit.*—The memorandum commended "the forward step taken by the enactment of legislation establishing the Bank of Canada," but asked for an amendment to make the bank nationally owned and controlled. The Banking Act, it was suggested, should be amended so as to prohibit interlocking directorates of banks; and stringent control should be provided over loans to brokers for stock market purposes and over speculative investments of banks likely to result in over-capitalization of industrial concerns.

Employees of banks should be given the right of association to organizations of their own choosing and every assistance rendered to

establish the principle of collective bargaining in respect to their conditions of employment. To this end all banking institutions should be brought within the jurisdiction of the Federal Industrial Disputes Investigation Act.

*Interest Rates and Financing of Public Works.*—A reduction was suggested in the interest rates on public loans, mortgages and other debts in respect to which the government may exercise control.

In regard to the financing of public works, the memorandum stated as follows: "It is our studied opinion that the government should at all times use the national credit and issue non-interest bearing certificates (new currency) to the amount involved in the carrying out of any public undertaking, a percentage equivalent to that now set aside for sinking fund to be withdrawn from circulation each year to ensure that the amount of credit used would at no time exceed the value of the assets created."

*Income Tax.*—Section 5 of the Income Tax Act relating to exemptions should, it was contended, be amended so that *bona fide* payments made by trade unionists towards relief of unemployed members of their respective organizations may be included in exemptions allowed in the same manner as if these payments were made through the medium of charitable organizations.

### International Peace

The memorandum recommended that there should be no declaration of war by Canada until a referendum of the people to sanction such action has been taken.

Support was given to international efforts towards disarmament and world peace, and to active Canadian membership of the League of Nations, the World Court and the International Labour Organization. The memorandum asked the Government to put forth greater efforts to support the work of the labour section of the League, especially in respect to the ratification of the Draft Conventions dealt with at the conferences of that body. It was further asked that appointment of delegates and advisers to attend the League and the International Labour Organization should be made as early as possible before the date of the meetings, thus enabling those chosen to be better prepared to fulfil the duties assigned to them.

"Fascism and similar forms of dictatorship," the memorandum continued, "with their perverted nationalism, create a menace to world peace and are constantly pushing nations toward war-like activities. To prevent the growth of a Fascist movement in Canada we ask the prohibition of the wearing of uniforms in public by members of political organizations.

"Peace is also constantly threatened by allowing the manufacture of armaments to remain in the hands of private firms whose sole object is profit. Their urge is always towards an increase in armaments and to prevent this every effort should be made to secure the nationalization of the manufacture, import or export of war material and arms by all countries, supervised and controlled by the League of Nations, and we respectfully ask that the Canadian Government, through its membership in the League of Nations, give its support to these proposals.

"We have also noted with pleasure the action taken during the present session of Parliament to ensure strict observance of Remembrance Day as a public holiday, which action meets the request contained in a resolution adopted at our last convention."

### Other Requests

The memorandum made the following further recommendations:

Repeal of Section 98 of the Criminal code.

Immediate effect to be given to the Canada Shipping Act as amended at last session, with a further amendment so that the definition of "Sailing Ship" be restored as originally set out in Bill E, as passed by the Senate. Without this amendment vessels classed as sailing ships are exempt from its provisions, irrespective of the amount of auxiliary power of engines of the internal combustion type that may be used.

Amendments to Fair Wage Act, 1930, so as to repeal Clause 2, Section 3, and extend its provisions to cover all undertakings financed wholly or in part by Dominion Government funds and to companies or commissions operated by or on behalf of the Government, also to crews of ships having contracts with the Dominion Government. The provisions of Section 5 of the Act should be made effective to prevent abuses.

Revision of Alien Labour Act, its administration to be assigned to a Minister of the Government.

Continued strict enforcement of the Immigration Act and regulations respecting contract labour and refusal by the government to participate directly or indirectly in any scheme of subsidized immigration until those resident in Canada are assured of the opportunity to maintain themselves by their own labour.

Labour representation chosen in agreement with the Trades and Labour Congress of Canada on all appointed bodies dealing with matters affecting the interests of wage earners. (In connection with this matter appreciation was expressed of the action taken continuing labour representation on the National Research Council).

Payment of pensions to blind persons.

Sales Tax amendment, repealing exemptions given to printing establishments whose annual business does not exceed \$3,000 per year.

Amendment of the Copyright Act prohibiting printing from type not set and plates not made in Canada.

Labelling of poisonous materials injurious to the health of workers.

Extension of the Superannuation Act to "prevailing-rate" employees, including marine engineers in government service.

Legalizing of the conducting of sweepstakes under government supervision and control.

Grants for technical education in accord with provisions of the Vocational Educational Act of 1931.

Abolition of all grants for cadet training in schools.

Amendment of the Election Act to provide that ballot papers state the political party which the candidate represents, instead of a description of the occupation followed. It was further asked that proper accommodation be secured for polling booths instead of the use of rooms in private homes where voters are often compelled to hide behind pianos and bed sheets to secure the secrecy of their ballot.

In conclusion, appreciation was expressed for the action taken during the last session of Parliament to amend the Criminal Code by re-inserting the clause defining the right to picket, and also the continued strict enforcement of the Immigration Act and Regulations as they affect the admission to Canada of contract labour.

### The Prime Minister's Reply

The Prime Minister expressed his appreciation of the constructive suggestions in the memorandum. Referring to the delay, of which complaint had been made, in carrying out the \$40,000,000 construction program authorized last session, Mr. Bennett said it partly resulted from the policy of engaging local architects and delay in the preparation of plans. He called attention to the extensive work that had been going on in the repairing and cleaning of public buildings throughout Canada since last summer; this work had put a surprising amount of money into circulation.

The Prime Minister regretted that so far Canada had a bad reputation at Geneva in regard to the ratification of Draft Conventions of the International Labour Conference. This was due to past uncertainty in matters of jurisdiction. For example, the Draft Convention on Unemployment Insurance adopted last year, was framed on the basis of its adoption by a unitary power. It was pro-

posed, however, to have five of the Draft Conventions ratified at the present session of Parliament.

In regard to direct relief Mr. Bennett expressed the view that the distribution of relief would not in the nature of the case be a function of a central government; it was essentially a local matter, the product of the community spirit, and for this reason relief was assigned by our constitution to the local authorities rather than to the Dominion. The purpose of the relief camps, he said, was to prevent young men from becoming derelict wanderers, and he claimed that they had proved their utility, as 19,000 young men had been absorbed into industry from these camps. He pointed out that even in the most prosperous times there was an irreducible number of unemployed people in this country, due to seasonal employment and other causes, averaging 150,000 over a ten year period, but there had never been a time when these unemployed had been so well provided for as in recent years.

As to the Unemployment Insurance Bill now before Parliament, the Prime Minister said that suggestions as to the details of the measure would receive careful study. Its main principles, however, followed those of the English system, and in a new country they could not depart very far from these principles without meeting disaster. The rates of benefit under the Act had been prepared by actuaries and were based on Census figures, rates of contributions and other factors. It was sought in the Bill to keep the unemployment insurance system out of politics, and the various local boards and committees were to be chosen with the advice of the workers and employers. He reminded the delegation that the Commissioners under the Act would have power to extend the provisions of the Act to workers in excepted industries in cases where local conditions might seem to warrant their inclusion.

Mr. Bennett did not favour the proposal to reduce the age for Old Age Pensions, partly on account of the cost, which would mean an additional \$20,000,000, and partly because it would tend to discourage the virtue of thrift. In his opinion a contributory system like that in Great Britain would be preferable, the contributors to build up a reserve from which they would benefit in their old age.

Consideration of amending the British North America Act, he said, was to be undertaken by a Parliamentary committee. As regards appeals to the Privy Council, he pointed out that leave to appeal was granted by Provincial Supreme Courts, and that the Dominion had no authority to prevent such action. The

Supreme Court of Canada had already discontinued appeals in criminal cases.

The Prime Minister re-affirmed the Government's position on the question of the ownership of the Central Bank, stating that he would never consent to the Bank's being made a political organization. Canada, he said, was more subject to political influence than any other British Dominion, except one. He also referred to the reference in the memorandum to the interest rates. He cited the German experience of the danger of inflating currency, pointing out, however, that with a gold coverage lightened in keeping with the standard approved at the recent economic conference at London, the situation in Canada had been relieved.

In regard to the proposed repeal of Section 98 of the Criminal Code the Prime Minister stated that the position in regard to this section had been changed by the decision of the Ontario Supreme Court that membership of certain organizations constituted conspiracy under the section.

### Coal Production in Canada in December, 1934

Coal produced in Canada during December amounted to 1,277,451 tons, a 2.1 per cent decline from the December, 1933, output of 1,304,830 tons. The average output for December during the past five years was 1,298,002 tons. In December, 1934, the production included 751,687 tons of bituminous coal, 64,780 tons of sub-bituminous coal and 460,984 tons of lignite coal. Alberta mines produced 549,484 tons of coal in December as compared with 626,517 tons a year ago. The December, 1934, production in Alberta was made up of 164,840 tons of bituminous coal, 64,780 tons of sub-bituminous coal and 319,864 tons of lignite coal; the December, 1933, total included 163,139 tons of bituminous coal, 72,066 tons of sub-bituminous coal and 391,312 tons of lignite coal. In Nova Scotia, 413,813 tons were mined; this represented an increase of 14.7 per cent over the December, 1933, total. British Columbia's output in December was at approximately the same level as a year ago; the totals were 144,043 tons and 145,883 tons, respectively. Saskatchewan produced 141,120 tons of coal during the month as against 142,861 tons in December, 1933. A slight increase was recorded in the tonnage of coal mined in New Brunswick; the December, 1934, total was 28,991 tons and the output in the corresponding month of 1933 was 28,248 tons.

## ONTARIO EXECUTIVE OF TRADES AND LABOUR CONGRESS PRESENTS LEGISLATIVE PROGRAM TO PROVINCIAL GOVERNMENT

THE Ontario Executive of the Trades and Labour Congress of Canada, on January 31, presented its program of proposed legislation to Premier Mitchell F. Hepburn and members of the Ontario Legislature. In addition to the Executive—which consisted of Messrs. W. G. Russell, Rod Plant, E. S. Walker and D. H. Lamb—supporting the presentation were three officers of the Congress in the persons of Mayor James Simpson, Mr. R. J. Tallon and Mr. P. M. Draper, together with a large delegation of representatives of affiliated national and international unions.

Present with the Premier were: Hon. A. W. Roebuck, Hon. D. A. Croll, Hon. H. C. Nixon, Hon. Dr. L. J. Simpson, Hon. Dr. J. A. Faulkner, Mr. J. F. Marsh, provincial Deputy Minister of Labour, and Mr. A. W. Crawford, chairman of the Minimum Wage Board.

*Unemployment.*—The committee advocated a number of measures on unemployment. Among these were: payment of fair wages in road construction camps; the giving of opportunity for employment to all in need of same without restricting it to those actually registered as on relief; according of the same consideration to unemployed women as to men in the granting of direct relief; stimulation of employment in the building industry by the initiation of all possible work such as the construction of a number of much-needed public buildings (including penal and mental institutions) and the remodelling and renovation of others, bringing them up to the proper sanitary and safety requirements; inauguration of a slum clearance program, financed by a fund made available by the government to municipalities; provision (in works projects) for a maximum six-hour day and thirty-four hour week without reduction of aggregate earnings; purchase of departmental and other supplies during periods of unemployment; clearing of lands for agricultural purposes; further development of free employment bureaux and the abolition of fee-charging agencies; abolition of duality of employment.

*Industrial Control and Minimum Wages.*—Under this heading, the Executive presented a number of recommendations on the question of "legislative control of industry to prevent exploitation of workers." Among these were the following: appointment of sufficient inspectors to ensure enforcement of present and future legislation; the provision (in all industrial regulatory laws) of minimum and maximum hours; uniformity of laws in the

Dominion to prevent inter-provincial competition and evasion of standards (it was suggested that this could be best achieved by amending the British North America Act giving to the Federal government full power to enforce such regulations); adequate penalties for violations of regulatory laws; provision for the co-operation of trade unions by collective agreements; prohibition of exemptions; recognition of the right of organization in unions free from any control whatever by employers or their agents; functioning of trade unions without being compelled to incorporate; trade union representation on all joint bodies created for the purpose of framing, administering or enforcing industrial control legislation.

"By the following of these recommendations," it was claimed, "any apparent need for minimum wages for men, fixed in the same manner as minimum wages for women have previously been dealt with, will be obviated. Experience has shown that these, too often, become the maximum and take no cognizance of other than the barest necessities of life."

### *Other recommendations.*—

Extension of moratorium legislation.

Enactment by legislation to permit consolidation of tax arrears, and payment of arrears over a period of five years.

Amending the Mechanics Lien Act to give workmen added protection and facilitate collection of wages as a first charge.

Amending the Bankruptcy Act to give priority to wage charges.

Adoption of six-hour day and five-day week on all projects undertaken by the government or municipalities (Federal-provincial co-operation was urged in this matter).

Adoption of the three-platoon system or the eight-hour day for all permanent fire departments.

Continuation of the Apprenticeship Act and its extension to include all branches of the construction industry.

Provincial support to the recommendation of reducing the age limit for pensions to 65 years, and the appointment of a labour representative on the provincial commission (the Executive also protested "any tightening up policy" that "would turn old age pensions into an old age pittance").

Granting of the Mothers' Allowances in one-child cases, and raising the property exemption from \$2,500 to \$5,000.

Enactment of legislation providing for sickness and disability insurance.

Licensing of all electricians by a competent board of examiners.

Institution of a system of regulations for the protection of linemen and others in the electrical industry.

Adoption of the recommendations in the report of the National Research Council respecting the operating of moving picture machines (these recommendations pertained to the qualifications of projectionists).

Enactment of legislation restricting the use of one-man street cars with a view of their total abolition.

Enactment of a Fair Wage Act.

Amendments to the Workmen's Compensation Act: (1) ensuring to the workman the prescribed amount of 66½ per cent of wages until fit to resume his usual occupation; (2) compelling all institutions and public service bodies to insure their employees under the Act; (3) extension of the period for the provision and maintenance of artificial limbs, and apparatus; (4) extension of the list of industrial diseases to include silicosis, frost-bite, and poison ivy infection.

Extension of the principle of public ownership of public utilities to "prevent profiteering in connection with natural resources."

Legalizing the advertising of products of Ontario breweries and distilleries.

Enactment of legislation "protecting the workers in all industries in the exercise of their rights to organize, bargain collectively, secure signed agreements," etc.

That legal status, or official recognition (in respect to collective bargaining and agree-

ments) should not be accorded any employees' organization formed or controlled by the employer.

Amending the Factory Act to bring working hours "into line with the present-day requirements of a shorter work day and week."

Stricter enforcement of Operating Engineers' Act, and of the regulations applying to hoisting machinery, and also of the blower laws.

Prohibiting the employment of females and inexperienced males on power cutting machines.

Licensing of all employers and journeymen (steamfitters and pipe fitters) and the putting into effect of the plumbing regulations.

Licensing of barbers in municipalities of over 1,000 population with regulation of prices.

Stricter regulations of the use of poisonous materials.

Regulation of motor transportation under the Board of Railway Commissioners or a similar authority, and the regulating of the working hours of drivers.

Amending the Educational Act to abolish examination fees, and to provide for free school books.

Substitution of physical for military training.

Non-restriction of the operation of the provincial bank.

The plate printing of bond securities in Canada.

Amending the Election Act to abolish obsolete voting practices and protesting against the institution of an election deposit.

Bonding of all lawyers and notaries handling trust funds.

Adjusting of witness fees to conform with present-day incomes.

## Apprentice Training Program in United States

A Federal Committee on Apprentice Training was established in the United States by order of the President last July, its membership including representatives of the Office of Education, the Department of Labour, and the National Recovery Administration. The committee has been instructed to prepare basic standards for use in developing apprentice-training programs. Standards may vary according to occupation or industry but must include provisions that (1) the apprentice-training period shall not be less than 2,000 hours nor more than 10,000 hours of reasonably continuous employment; (2) at least 144 hours shall be devoted to group instruction on general as well as technical subjects under direction of public authorities

and that this time be included in the maximum working hours prescribed in the applicable National Recovery Administration code or codes, provided that where the maximum is 40 hours or less per week the hours devoted to study may, in the discretion of the appropriate authority, be in addition to the regular hours, but with 44 hours per week the absolute maximum including hours of instruction; and (3) the beginning wage ordinarily shall be not less than 25 per cent of the basic rate for journeymen in the locality, the wage to be increased periodically so that the average rate for apprentices for the entire period of apprenticeship shall be not less than 50 per cent of the journeymen's basic wage.

## ALBERTA FEDERATION OF LABOUR

### Proceedings at the Nineteenth Convention, Lethbridge, January, 1935

WITH a representative attendance of delegates, the nineteenth convention of the Alberta Federation of Labour was held in Lethbridge on January 14, 15 and 16. In the annual report of the president and secretary, the problem of the permanent partially disabled workman was stressed, and it was urged that until such have had the opportunity of securing gainful occupation they should be carried on a basis of compensation "that will bear a relationship to the amount the injured workman has received during the period immediately following his accident." The report further declared that "the workman should not be penalized because of his inability to secure light employment—which the Board recommends that he should secure—or payments should not be withheld pending the establishment of loss of earnings, such as is the practice at the present time."

The Committee on compensation submitted about twenty resolutions. Practically all of of these were adopted, although some were amended or revised before being carried. Among the chief recommendations made in these compensation resolutions were the following:

Opposition to any movement to amend the Act providing for Court appeals in the settlement of claims.

Elimination of the three-day waiting period; the putting into effect of a more equitable system of computation of average wages, and the establishment of a minimum rate of compensation at \$20 per week.

Payment of full compensation until the injured workman is able to do a full day's work in the industry in which the injury was sustained, and the provision of institutional treatment during the period of rehabilitation.

Extension of the Industrial Diseases section to include compensation for rheumatism and pulmonary diseases of miners.

Computation of compensation based on the daily earnings at the time of accident.

Establishment of a Board of Review of three members consisting of the Attorney-General and two lay members, one of these to be a trade unionist appointee of the Federation.

Provision of burial expenses not exceeding \$175 instead of \$125; increasing of the monthly payment to widowed dependents from \$35 to \$50; and \$15 per month for each child until the age of 18 years.

Extension of the period of notification in hernia cases to two weeks.

Payment of the medical aid fund by industry instead of by the workers.

In a lengthy resolution, divided into two sections, the convention endorsed certain recommendations regarding the unemployment problem. The first section contained suggestions for immediate relief and the second suggested lines of action "to bring about permanent economic change to the end of its complete eradication from our economic system." In the first section (dealing with immediate relief) were advocated such measures as an unemployment fund (derived from a tax on industry), provisions to supply the adequate necessities of life (including housing and health and medical services), systematic construction of roads and streets, etc. Under the second category, was recommended the establishment of a federal economic council to regulate hours of labour and provide for the absorption of youth into industry and to have power of control over trade and industry, "so that gains arising from the industry of the nation shall belong to the people of Canada."

The recommendations contained among the other resolutions adopted were:

Reduction of the old age pensions limit to fifty years; that the act be made entirely a federal measure; and that there be no deduction in pension in cases of income of less than \$1,000.

Enactment of non-contributory unemployment insurance to include all classes of employment. (Another resolution urged the establishment of a fund by Federal appropriation with provision for repayment by assessments on industry, and the re-training of those displaced by mechanization).

Abolition of relief camps and the treatment of single men on a basis with married unemployed. Another resolution sought payment of single men's relief work at a rate to be set by the Dominion Fair Wage Officer.

To accord to unemployed, or partially employed, home owners the same consideration as given to tenants in the payment of rent.

Stoppage of the practice of municipalities "in exacting a work return" from direct relief recipients.

Establishment of the six-hour day and five-day week for all mine workers (a subsequent

resolution called for a general six-hour day and five-day week).

Enforcement of regulations in all mine wash houses.

Investigation of the possibility of securing a lighter weight of lamp for underground workmen.

Protesting the employment of relief workers (displacing regular miners) in the development of inferior and low grade deposits of coal as a relief measure.

Establishment of a central mine rescue station in Drumheller, and placing the mine rescue service under the Department of Mines.

Nationalization of mines.

Employment in the mines of only British subjects with five years' Canadian residence.

Five dollar per ton subvention to freight rates on coal to Ontario for a period of five years.

Stabilization of wages and working conditions in the building trades.

Establishment of fair wages and working conditions in the dairy industry.

Application of fair wages and working conditions (as designated by the western representative of Federal Department of Labour) to all provincial contracts.

Stricter enforcement of minimum wage laws for women.

Enforcement of a "living annual minimum salary for all school teachers."

Regulation of motor vehicle transportation under the government of Canada, and the limitation of the carrying capacity of trucks "in accordance with the resistance of the highways."

Establishment of an eight-hour day and forty-hour week for bus and truck drivers.

The supplying of free school books in the public and high schools, and the inclusion of "Social Science" on the curriculum.

Enactment of legislation prohibiting the use of poisonous ingredients in spray painting.

Establishment of nationally recognized standards of efficiency and competence in the professional staffs of mental hospitals.

Inauguration of state medicine, hospitalization, etc.

Periodical medical examination of those employed in the sale and handling of foodstuffs.

Institution of an eight-hour day for nurses, and the enactment of a maximum eight hour day in packing plants.

Ten per cent increase in Mothers' Allowances, and the re-establishment of the amount provided in the Act of 1930 for home maintenance, etc.

No labour to be supplied by government employment bureaus at less than the recognized trade union rate.

Display of union label, shop card, etc., as a symbol of efficient workmanship, honest wages, reasonable hours.

Institution of an organizing campaign in Western Canada "to eliminate dual unions and bring the workers into the international trade union movement."

Establishment of a projectionist licence renewal fee of not more than two dollars and the abolition of witness of signature, now required of projectionists.

Comprehensive survey of social legislation by federal and provincial governments.

Appointment of an official capable of passing on plumbing installations.

Restoration of seniority rights to checkweighmen.

Establishment of homes for old people.

Repeal of Section 98 of the Criminal Code, and restoration of the clause defining the legalizing of picketing and freedom of speech.

Continuation of the "non-political" policy.

Amendment of the Industrial Disputes Investigation Act, shortening the period for establishing a conciliation board.

Storage of first-aid supplies in different sections of a mine.

Abolition of cadet training.

Inauguration of a federal-provincial-municipal building program for the unemployed with the payment of fair wages.

Payment of a minimum wage of \$12.50 per week to boys in stores and factories.

Protesting the closing of No. 6, Galt Mine at Lethbridge by the C.P.R.

The election of officers resulted as follows: President, F. J. White; secretary-treasurer, Carl E. Berg; delegate to Trades and Labour Congress convention, A. J. Morrison; delegate to United Farmers of Alberta, E. E. Roper.

## New Labour Organizations in Canada

According to information received in the department, the following organizations have been chartered by the Trades and Labour Congress of Canada:—

Federal Labour Union No. 64, Sturgeon Falls, Ont.; Pres., A. J. Lapensee, Box 292, Sturgeon Falls, Ont. Sec., Armand St. Denis, Sturgeon Falls, Ont.

Hamilton Optical Workers' Federal Union No. 22; Pres., C. Miller, 200 James St. E., Hamilton, Ont. Sec., J. L. Osier, 6 Alexander St., Hamilton, Ont.

## Reform Program of British Trades Union Congress

It was announced in London in January that the General Council of the Trades Union Congress, in preparing a statement of its policy for political purposes, intended to omit any reference to the abstract principles of socialism and to confine itself to a practical and immediate policy which Parliament could carry into effect; in other words the program will consist of proposals for social reform of a definitely evolutionary character. The proposals will deal with industrial legislation, the social services, and national development as the means of preventing unemployment. The measures of industrial legislation include the repeal of the Trade Union Act of 1927, the

raising of industrial standards by the improvement and extension of the Factories and Workshops Acts, the Shops Acts, the Acts relating to the employment of children and young persons, the Minimum Wage Acts, the Workmen's Compensation Acts, and so on, and new legislation to regulate the conditions of employment in offices and the distributive and catering trades. A prominent position is given in this section of the program to the 40-hour week, and also to increasing the spending power of the great body of consumers. The social services which are particularly mentioned are housing, health, education, and the maintenance of the unemployed.

## CANADIAN CONSTRUCTION ASSOCIATION

### Proceedings at the Seventeenth Annual Convention, Montreal, January, 1935

**L**OW cost housing and governmental relations with industry were two of the chief topics under discussion at the seventeenth annual convention of the Canadian Construction Association held in Montreal from January 22 to 24. With a large number of delegates from every part of the Dominion, and representative of the three major groups—general contractors, trade contractors, and manufacturing and supply—the sessions commenced with a review of construction conditions throughout the country.

In his presidential address, Mr. W. H. Yates, quoted construction statistics to show that there had been an increase of 29 per cent in construction over the previous year but that "the industry was still a long way short of the \$300,000,000 volume that constituted an average normal year." The president emphasized "the efficacy of governmental building programs" pointing out that in Great Britain "marvellous results had been achieved at a cost of only a 2 per cent increase in the internal debt," while Canada's program, involving a \$40,000,000 expenditure, was being carried out without adding a cent to the debt. He hoped that the Canadian program would be enlarged "as a means of correcting the unemployment situation and restoring prosperity."

Re-organization of the industry was urged by the president, and also in the report of the honorary treasurer, A. K. Purdy.

The annual report of the general manager, J. Clark Reilly, outlined the activities of the

Association, and the legislation affecting construction which had come into effect during the year. It also touched on the increasing interest in housing.

At the annual banquet of the Association, the Prime Minister, Rt. Hon. R. B. Bennett, made reference to public works and housing. He declared that he was not disappointed in the results of the government's forty million dollar program of public works and hoped to continue in it so as to give employment to increasing numbers this year. He stated that it was "a highly disputatious" subject, and referred to the experience of Great Britain in public works as reported to the League of Nations, pointing out that Canada was a new country as distinguished from an old one. The Prime Minister considered it "a reflection upon Canada's civilization that this young country should be talking about a housing problem." However, housing problems were present in our large cities and would have to be met. It was the duty of government, he said, to determine just to what extent the tax-payer may be called upon for the purpose of assisting communities whose primary obligation it was to supply proper housing for their people. With the co-operation of the Association he hoped to evolve some scheme that would improve the situation.

At one of its sessions the convention debated the problem of slum clearance and low cost housing, papers and addresses being given by eminent authorities on the subject.

"The Relation of Government to Industry" formed the topic of discussion at another ses-

sion during which this whole field was surveyed by various speakers. In this respect, the minimum wage legislation of British Columbia and the Collective Labour Agreements Extension Act of Quebec were explained to the delegates. Out of the discussion came a concrete resolution, reported on by a special committee and adopted, as follows:

"Your Special Committee reports that it has examined the papers submitted, dealing with existing legislation in three of the Canadian Provinces, in regard to the rates of wages and limitation of hours in the construction industry. It is undoubtedly true that legislation dealing with both rates of wages and limitation of hours and other legislation will shortly be introduced in every province. Be it Resolved, therefore, that we urgently recommend that the construction groups in each Province take immediate steps to study all existing and proposed legislation and to immediately make known to their respective governments their willingness to co-operate in the preparation and enforcement of such legislation. It is felt that this proposed legislation, is one of the most important measures ever introduced into the building trades and its outcome will either be in the nature of interference with or assistance to our industry, depending on the steps which are taken by the local construction groups to assist the government in the preparation of suitable legislation. We further suggest that the local groups in each Province make known their identities to our General Manager in Ottawa, in order that these various groups may make available to each other the results of their deliberations."

Following this, the General Contractors' Section submitted the following recommendations, which were approved:

"That this Section recommend to the incoming Executive that a committee be formed to make a thorough study of the question of

providing cheap money through Government assistance, or through Government guarantee; That a committee of five be appointed by the incoming executive to study and report upon evils within the industry, particularly with regard to tenders submitted below cost; That the Association petition the Government of Canada that with respect to all contracts for the execution of public works, same be called for by public advertisement, in conformity with previous practice, and that tenders be opened in public; That whereas the existing situation with respect to the Canadian railways is known to involve the Treasury in heavy outlays of money, thereby burdening the taxpayer, preventing the government from proceeding with necessary constructive measures for the advancement of the national welfare, and generally undermining confidence, this Convention goes on record as petitioning the government to take immediate and definite action to establish our transportation system on an economic basis."

On the question of housing, the following resolution was adopted:

"Whereas the building construction industry is one of the largest industries in Canada, and whereas the building industry normally supports a great number of skilled and unskilled workers; and whereas the said industry is suffering from stagnation to a greater degree than any other in Canada, and whereas the Canadian Construction Association has taken cognizance of the reports on slum clearance and housing already completed or in preparation by responsible bodies in the larger cities of Canada; be it resolved that the Government of the Dominion of Canada is respectfully invited to consider the degree in which the adoption of a Housing Policy would benefit the country as a whole by stimulating recovery in the building trades and to study the various facts and proposals contained in the reports on slum clearance and housing above-mentioned."

### Accident Risks in the Building Industry

In an international survey dealing with the accident risk in the building trade, the *Monthly Summary* of the International Labour Organization states that "the frequency and severity of industrial accidents seem on the whole to be approximately twice as great for the building trade as for the average of all industries."

Statistics of accidents from Austria, Canada, France, Germany, Great Britain, the Netherlands, Spain, Sweden, Switzerland and the United States indicated that the building and construction industry had a high fre-

quency rate when compared with the average of all industrial accidents. In Canada in 1931, it is stated, the building industry took first place with 18.27 per cent of all fatal industrial accidents; in 1932 it was third with 12.73 per cent. The survey further states that the studies of the I.L.O. in the field of industrial safety have shown that the only industries with higher accident rates than the building industry are mining, navigation and lumbering—i.e., those in which the workers have to contend with natural phenomena that are particularly difficult or quite impos-

sible to control, such as outbursts of gas, movements of ground, bad weather, etc.

As a result of the situation disclosed by the survey, the Correspondence Committee on Accident Prevention, meeting in Geneva in November last, adopted a resolution emphasizing the very special sources of dangers that the building and public works industries present, and also the fact that these dangers can be diminished if appropriate measures are taken. The Committee, by resolution, urged

that the question of the safety of building workers be placed on the agenda of the International Labour Conference in 1936 with a view to the adoption of international regulations. It further expressed the hope that it would be invited to discuss, as soon as possible, draft regulations embodying the safety principles that should be generally applied in that industry. These resolutions, it is understood, will be submitted to the Governing Body of the Office at an early session of 1935.

## FISHERIES STATISTICS OF CANADA, 1933

**I**N a volume entitled "Fisheries Statistics of Canada, 1933" the Dominion Bureau of Statistics (in collaboration with Dominion and Provincial Fisheries Departments) has recently published information as to the catch of fish, its market value, the operation of canneries, capital equipment, the number of employees, etc. The fisheries of Canada are reviewed from earliest times, when the Cabots discovered the cod banks of Newfoundland, right down to the modern period of this country's first industry.

According to the summary of 1933 activities, the year's total catch of all kinds of fish, both sea and inland waters, and including shellfish, amounted to 813,357,200 pounds, having a marketed value of \$27,558,053. In comparison with 1932 results these figures represent a decrease of 3,026,000 pounds in catch but an increase of 1,600,943 in marketed value. Of the catch, 725,431,000 pounds were taken in the sea fisheries while 65,595,000 pounds were taken from the inland waters of Canada. The sea fisheries production had a marketed value of \$23,494,695, and the inland fisheries output a value of \$4,063,358.

The total marketed value was divided among the provinces as follows: To British Columbia forty-three per cent, which is five per cent more than in 1932; the three Maritime Provinces thirty-six per cent; Quebec and Ontario seven and one-half each and the Prairie Provinces and Yukon the remainder.

On the basis of market value, the report points out that the chief branch of the industry from the monetary standpoint is the salmon fishery, which had a total marketed value for the year of \$9,758,346, of which British Columbia's share was \$9,184,090, or 94 per cent. The lobster fishery ranked second, with a marketed value of \$3,524,355, while the cod fishery dropped to \$2,598,756. The whitefish fishery, which is the most important of the inland fisheries, had a marketed value of \$1,136,400 which is only a little more than half what it was a few years ago, when market conditions were more favourable.

### Capital Investment

The report summarizes the capital investment and the number of employees in both the primary operations and in fish canning establishments in the following paragraphs:

*Primary Operations.*—The value of the vessels, boats and gear used in primary operations of catching and landing the fish in 1933 is placed at \$25,380,082, compared with \$24,746,066 in 1932 and \$26,240,001 in 1931. To the total value in 1933 the sea fisheries contributed \$21,093,282 and the inland fisheries, \$4,286,800.

*Fish Canning and Curing Establishments.*—The capital investment of the fish canning and curing branch of the fisheries industry in 1933 had a total value of \$15,532,775, compared with \$17,043,212 in 1932 and \$19,085,513 in 1931. The total for 1933 (as calculated on the last day of the business year) is apportioned as follows: land, buildings and machinery, \$9,199,545; materials, fuel and supplies on hand, \$1,053,805; products on hand, \$3,225,995; and cash and accounts and bills receivable, \$2,053,430.

*Total Capital.*—The total amount invested in the Canadian fishing industry in 1933, including vessels, boats and gear and the capital investment of the establishments, was \$40,912,857, compared with \$41,789,278 in 1932 and \$45,325,514 in 1931.

### Employment

*Primary Operations.*—The number of men employed in catching and landing the fish during the season was 65,506, of which 54,745 are credited to the sea fisheries and 10,761 to the inland fisheries. The total number shows an increase over the preceding year of 1,022, and an increase over 1931 of 3,695.

*Fish Canning and Curing Establishments.*—The total number of persons recorded by the establishments during the season of operations was 14,042, compared with 13,724 in 1932 and 13,071 in 1931.

*Total Employees.*—The fishing industry, therefore, in 1933 gave employment during the season to a total of 79,548 persons, compared with 78,208 in 1932 and 74,882 in 1931.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Nineteenth Session of the Conference

THE agenda of the Nineteenth Session of the International Labour Conference, which is to open in Geneva, Switzerland, on June 4th next, will comprise the following items:—

1. Maintenance of rights in course of acquisition and acquired rights under Invalidity, Old Age and Widows' and Orphans' Insurance on behalf of workers who transfer their residence from one country to another (second discussion).

2. Employment of women on underground work in mines of all kinds (second discussion).

3. Unemployment among young persons (first or single discussion).

4. The recruiting of labour in colonies and in other territories with analogous labour conditions (first discussion).

5. Holidays with pay (first discussion).

6. Partial revision of Draft Convention concerning the limitation of hours of work in coal mines (1931).

7. Application of the 40-hour week to public works undertaken or subsidized by Government; iron and steel industry; building and contracting; glass bottle manufacturing; and coal mining.

### Work of the I.L.O. During 1934

A review of the work of the International Labour Organization in 1934 is given in the *Monthly Summary* (Geneva) for December. The year 1934 was marked by the accession of the United States (LABOUR GAZETTE, July, 1934, page 662, and September, page 842) and of the Union of Soviet Socialist Republics (LABOUR GAZETTE, November, 1934, page 1029). These new memberships, with Afghanistan and Ecuador, now make a total of sixty-two nations belonging to the International Labour Organization, which is regarded as now having "reached a decisive stage on its way to becoming definitely a universal institution." It is pointed out that the "universal character has moreover been emphasized within the structure of the Organization itself, as a result of the entry into force of the amendment of the Treaty of Peace—the application of which has remained in suspense for twelve years—allowing the election, for the first time, of an enlarged Governing Body. This new form assures a closer collaboration of the Governments, employers and workers of extra-European countries. These developments will afford the Organization greater possibilities of success in connection with the problems raised by the depression throughout the world, which,

owing to their great and varying scope, can only be dealt with properly by an institution of world-wide extent."

It is considered that "the effective participation of the United States will, on the one hand, provide the Organization with very valuable information on the great effort of economic reconstruction which is being carried on by President Roosevelt's Administration, and which interests all other countries, and, on the other hand, will bring new life and viewpoints into the international discussion of the steps to be taken to combat the stagnation of economic life, as well as unemployment." This gain, it is stated, will be particularly noticeable in dealing with the problem of hours of work, one of the chief tasks of the Organization, and one in connection with which the United States has acquired most valuable first-hand experience.

There was no definite decision on the general question of working hours at the 1934 session of the conference but it has been placed on the agenda of the 1935 conference "in a form which is somewhat analogous to the American system of codes, since it aims at the adoption of a Convention providing for the reduction of hours of work throughout the sphere of economic activity, but allowing the application of the reform industry by industry, with the adaptations appropriate to each case." However, in 1934, the International Labour Conference registered an advance in this field by adopting a convention on the reduction of working hours in automatic sheet glass works (LABOUR GAZETTE, July, 1934, page 671) to the same effect as the one adopted in 1931 for the limitation of hours in coal mines (LABOUR GAZETTE, July, 1931, page 798).

At the same Session, the Conference extended the scope of the 1925 Convention on compensation for occupational diseases so as to include additional processes, one of the diseases so added being silicosis (LABOUR GAZETTE, July, 1934, page 672); it also adopted a partial revision of the 1919 Convention prohibiting the night work of women (LABOUR GAZETTE, July, 1934, page 674). The general lines of the Convention were left untouched, but certain minor changes were made with a view to facilitating ratifications by a larger number of countries.

The total number of Conventions adopted by the 1934 Conference was therefore four; and it also accomplished the first stage in the preparation of two Draft Conventions to be submitted to the 1935 Session for adoption. One of these concerns the conservation of

pension rights of migrant workers (LABOUR GAZETTE, July, 1934, page 660), and is a question of particular interest for countries having a very complete system of social legislation. The other, aiming at the prohibition of the employment of women in underground work in mines (LABOUR GAZETTE, July, 1934, page 660) is, on the contrary, mainly important for countries which are yet only in the first stages of industrial development. The contrast presented by these two problems is characteristic of the wide field of action of the Organization.

In addition to this program for 1935, the Governing body decided to bring to the attention of the Conference the problems of the unemployment of young persons, holidays with pay, and the recruiting of native labour in colonies and in other territories where labour conditions are similar. Reports on these subjects have been prepared by the International Labour Office. Preliminary studies (for submission at a later date) have also been made on such subjects as the safety of workers in the building industry; the employment of children in the cinematograph industry, the recruiting and placing of migrant workers, collective agreements, etc.

Apart from any proposal for international regulations, the International Labour Office has investigated, in the light of the experience already gained in many countries, the necessary lines of a rational public works policy, aimed at ameliorating unemployment and creating new economic activity. In this connection, the 1934 Session of the Conference adopted a resolution in favour of better co-operation in this field between States (LABOUR GAZETTE, July, page 660).

Among the principal studies and reports of the International Labour Office in 1934, special emphasis is accorded the report of one of the Assistant Directors, Mr. Fernand Maurette, on "Social Aspects of Industrial Development in Japan" which aroused the greatest interest in commercial, industrial and labour circles, because "it was a first contribution towards the solution of the questions of competition and standards of living which have arisen almost everywhere owing to the rapid industrial development of certain countries that, until recently, had remained outside the main currents of international competition."

In conclusion, the review states that "the great progress achieved in 1934 by international social legislation in extra-European countries cannot be too greatly emphasized. Of fifty-seven ratifications of the Conventions which were registered during the year, forty-four were by countries of Latin America and three by China.

### Publications of the Office

Under the title "Safety in Spray Painting," the International Labour Office has just published another monograph in the series devoted to problems of industrial safety. This report is the result of close co-operation between the Office and the Correspondence Committee on Accident Prevention. It consists of two parts, the first of which describes modern painting processes, the pigments used, the attendant risks and practical safety measures; the second part contains a survey of safety regulations in a number of countries. There is also a bibliography.

Hours of work in Postal Services is the title of a report in the Studies and Reports Series (Series D, No. 21). This report continues the study, commenced in 1927, of legislation in the various States on the subject of hours of work. The present report is the first of two studies which are to deal with hours of work in communication and transport services; the second will deal with transport undertakings proper (railway, tramway, road, inland, waterway, maritime and air transport). The present work deals with hours of labour in postal, telephone and telegraph undertakings which have certain common features and often form a single State department. It is confined to those European countries for which the Office has been able to collect adequate data.

### *Studies on Industrial Relations: III.*

Under the above title the International Labour Office has just published the third volume of a series of monographs dealing with industrial relations in particular undertakings, the primary object of which is to show the actual development of the relations between employers and workers. The undertakings described in this volume are the Canadian National Railways, the Pequot Mills of the Naumkeag Steam Cotton Company (Salem, Mass.), a Paris Department Store (La Samaritaine), the Norwegian Nitrogen Company and the Arbed Steel Works in Luxemburg. The last-named study covers industrial relations generally in the Grand-Duchy of Luxemburg in view of the fact that the Arbed undertakings are responsible for a large proportion of the industrial activity of the country.

### *Public Works Policy.*

The Office has also issued a report on the systematic organization of public works under the above title. After an introduction outlining the attempts made by the League of Nations and the International Labour Organization to stimulate and co-ordinate public works as a remedy for economic depression, the report examines recent trends in public works policy in different countries, the effect

on employment, and the cost of schemes in relation to the employment provided. A chapter is devoted to financial problems, describing the methods adopted to finance public works in different countries and the international problems involved. A further chapter deals with methods of operation and conditions of employment, with special reference to wages and hours of work. Finally, the report examines the problems of national and international co-ordination of public works schemes. A number of recommendations are put forward at the end of the volume. An appendix contains a list of the programs of works submitted by various Governments to the Committee of Enquiry on Public Works and National Technical Equipment set up by the League of Nations in 1931, and recommended by the committee to the attention of the Council of the League.

### *National Public Works*

The League of Nations Organization for Communications and Transits has recently published the results of an enquiry on National Public Works in 29 countries. It is explained that the publication of this 300-page volume originated at the 66th session of the Council of the League of Nations, which recorded the view that "a continuous international study of general questions relating to public works, including big programs of work financed out of national resources, would undoubtedly be of great value, as permitting of a comparison, in the interests of all the Governments, of the experience acquired in the different countries, particularly as regards the effects of the execution of public works, or of a particular category of public works, on the resumption of economic activity and on unemployment. The Council concluded that it would certainly be useful to collect without delay any preparatory information which might be required on this matter, with a view to subsequent discussion."

In a similar expression of views, the Assembly at its fourteenth session considered that "such information as might be collected on the subject would be particularly useful and would enable Governments to judge of the possibility and desirability of pursuing, under present circumstances, a policy of carrying out programs of public works on parallel lines."

In pursuance of such a policy the Governments were circularized to communicate particulars along the following lines: (1) a brief description of the main public works; (2) the principal administrative methods followed or contemplated for the execution of such works;

(3) the principal methods employed for financing such work; (4) an estimate of the allocation of expenditure "as between materials and equipment provided by national or foreign industries, on the one hand, and labour—that is to say, wages and miscellaneous social expenditure—on the other; (5) the Government's opinion with regard to the effects obtained or expected from the execution of the public works on the resumption of economic and industrial activities and on unemployment."

The replies of the governments are generally given in full but owing to their wide variance "it was thought better to publish the replies received as nearly as possible in their original form, without any attempt to draw up any systematic comparative statement based on the information contained in them."

In view of these conditions the report states:

"It was felt that it would not be possible, until after a study of the replies from the different governments and possibly examination by some appropriate technical organization, to proceed in the light of the results of the present initial enquiry to define more precisely the scope of the information required in the future, in the event of it being thought desirable to collect periodically documentary information covering the whole of the programs of national public works."

The executive committee of the Montreal City Council has presented a report dealing with the problem of providing medical care for the unemployed. Three plans were submitted. The first accorded the unemployed a free selection of doctors from a panel of medical men to be paid at a rate approximating 75 per cent of the schedule provided by the Workmen's Compensation Commission. Plan Number 2 provided that a group of 64 doctors be hired at a salary of \$3,000 a year each to serve exclusively the unemployed. The third plan proposed is to make the medical associations a lump sum payment based on the number of persons drawing relief and leaving the associations to organize the service provided.

It is understood that the Quebec Medical Association protested against the proposal to employ salaried doctors and submitted an alternative schedule of rates to that suggested in the first plan. The recommendation of L'Action Medicale, Inc., was that the principle of the free choice of doctor by the patient be respected, and that the medical society's representatives be consulted in the matter of a schedule of fees.

## UNEMPLOYMENT IN CANADA AS REPORTED BY TRADE UNIONS FOR THE YEAR 1934

THE labour trend among organized workers in Canada during 1934 was quite encouraging and it would appear as though the low point in the depression had been passed. This was apparent from the reports which were received monthly by the Department of Labour from local trade unions imparting their membership and the number of members out of work on the last day of the month. There were on an average 1,716 labour organizations making returns each month during the year under survey, with an average monthly membership of 155,694 persons, 18.2 per cent of whom were on an average unemployed.

The year 1934 has been one of consistent recovery, continuing in a broader sense the improvement of the latter part of 1933, and the employment situation each month was brighter than in the corresponding month of either 1933 or 1932. The most favourable conditions for the year were reflected in October when 16.2 per cent of the members reported were idle, while the percentage of 21.2 indicated in January constituted the unemployment maximum.

The manufacturing industries showed improvement each month over the previous year, the majority of trades participating in this better movement. Pulp and paper makers reported decided betterment of conditions during the year as did also the iron and steel trades. Among garment workers employment was more plentiful in the early months, followed by losses towards the close of the year. The building and construction trades showed little change in the first quarter of the year from the corresponding period of 1933, although activity tended favourably and improvement of more generous proportions were reflected from then onward. Transportation likewise indicated better conditions especially in the late spring and summer, and in services, both governmental and miscellaneous, a greater volume of work was afforded throughout the year. In communication there was little change in the employment level from 1933, several months showing slight increases in activity and others small recessions. The situation for lumber workers and loggers, which was favourable in the winter and early spring and particularly so in the summer months, declined substantially during the autumn period. Conditions in mining were varied, as in the fishing industry, the latter showing extensive employment curtailment in the closing

months of the year. Retail trade on the whole appeared rather slacker than in the previous year.

There was little change in the trade union situation at the close of January, 1934, from the previous month, though the trend was towards lessened activity, manufacturing and services showing a better employment movement, which was just more than offset by the curtailment evident in the remaining groups of trades. Conditions in February, however, were somewhat improved from January, manufacturing and transportation showing employment advances and continued gains in work available of small proportions were noted until the end of October. In November recessions of a seasonal nature were reflected, unemployment rising slightly to the close of the year.

---

### Payment of Doctors for Relief Service at Winnipeg

Speaking on a motion in the House of Commons on January 25, in favour of a national health policy, Dr. J. P. Howden (St. Boniface) described recent arrangements in regard to payment for medical services to persons on relief: "In Greater Winnipeg," he said, "medical men have for some time had to take what they could get and that was very little, but in the last few months we have had established there relief measures. They amount to this: as regards surgeons, for a major operation for which a surgeon could formerly demand and command a fee anywhere from \$100 to \$500, he is to-day paid \$25. Not only has the ordinary routine medical attendance been considerably diminished, but after a medical man completes his month and has given service in each of the several municipalities of Greater Winnipeg—and there are six or seven of them—running up to \$150 or \$200, or something of that kind, all he gets for his combined services in all municipalities is \$100 a month. It is possible, therefore, if a medical man's patients have to a very large degree fallen on evil days and are now on relief, his entire salary may amount to \$100 a month. A salary of \$100 a month is, of course, better than nothing, but compared with the fees that ordinarily would be paid to a doctor for efficient and intelligent services and the quantity of work of this kind he is expected to do, it does not seem to be an entirely fair way of treating him."

## REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD OCTOBER TO DECEMBER, 1934

THE work of the offices of the Employment Service of Canada during the quarter October to December, 1934, as indicated by orders received and placements effected, was about 10 per cent less in volume than during the corresponding quarter of 1933. This was entirely due to the curtailment of relief placements on road construction, there being upwards of 18,000 fewer persons sent to construction work of this and other kinds than during the last quarter of 1933. This decline was partly offset by gains in nearly all other groups, the most important being in services, logging and farming. Placements were higher in Nova Scotia, Quebec and Alberta and of the remaining provinces in all of which losses were reported, by far the largest decrease was in Ontario due to fewer placements on relief work as mentioned above. The accompanying table gives the vacancies and placements of the Employment Service of Canada by industrial groups in the various provinces during the period October to December, 1934.

From the chart on page 189 which accompanies the article on the work of the Employment Service for the month of December, it will be noted that although the curves of both vacancies and placements in relation to applications declined during the last half of both October and November, the tendency was generally upward, and at the close of the quarter both curves were about 11 points higher than at the end of 1933, and the ratios for the quarter as a whole were higher. During the period October to December, 1934, there was a ratio of 60.9 vacancies and 57.9

placements for each 100 applications for employment, as compared with 57.6 vacancies and 55.0 placements during the corresponding period of 1933.

The average number of positions offered daily during the quarter under review was 1,350, of applications registered 2,217, and of placements effected 1,283, in contrast with a daily average of 1,531 vacancies, 2,656 applications and 1,460 placements in regular and casual employment during the last quarter of 1933.

During the three months October to December, 1934, the offices reported that they had referred 104,182 persons to positions and had effected a total of 98,754 placements of which 54,834 were in regular employment and 43,920 in casual work. Of the placements in regular employment, 42,300 were of men and 12,534 of women, while casual work was found for 35,485 men and 8,435 women. Comparison with the same period in 1933 showed that 109,531 placements were then made of which 46,885 were in regular employment and 62,646 in casual work. Applications for employment during the period under review were received from 131,189 men and 39,545 women, a total of 170,734, in contrast with a registration of 199,163 persons during the same period of 1933. Employers notified the Service of 103,928 vacancies, of which 78,609 were for men and 25,319 for women, as compared with 114,817 opportunities for work during the last quarter of 1933.

A report in detail of the transactions of the Employment Service for the month of December, 1934, will be found on page 188.

## EMPLOYMENT CONDITIONS IN CANADA AT THE END OF JANUARY, 1935

### Reports of Superintendents of the Employment Service of Canada

THE employment situation at the end of January, 1935, was reported by the superintendents of the Employment Service to be as follows:

Except for ordinary chores, the delivering of firewood and hauling of ice, farming was quiet in the Maritimes. Adverse weather conditions also hampered the fishing industry and little change was reported in logging. Mines in the New Glasgow area worked from three to six days per week, while those in Cape Breton and vicinity operated from three to five days. No idleness was reported in the iron and steel group. Manufacturers of foodstuffs and confectionery stated business was fairly brisk and pulp mills and provincial wood products were working full time, but smaller concerns were experiencing a dull period. Little building construction was in progress outside of repair work. Many men, however, found employment in highway maintenance. Passenger and freight traffic, for the most part, was good and trade was fair. The usual number of requests was received for household workers in the Women's Division and placements made accordingly.

There were few placements in farming in the Province of Quebec and a decrease in the demand for loggers was reported, as the cutting season in some districts was almost over. Mining was quiet, also manufacturing, except at Montreal, where textiles were noticeably more busy. Notwithstanding the severity of the weather, building construction showed some slight improvement, for in Montreal a few orders were received for building mechanics and a large number of building labourers placed. Many men also found employment in snow removal. Transportation was fair, but trade quiet, apart from stock-taking sales. Activity was noted in the Women's Division, where there was a steady call for experienced cooks.

Very little demand existed in Ontario for any type of farm labour, although many experienced men were available. Heavy snowfalls somewhat hampered the logging industry, but bush workers of all kinds were sent out and contractors reported that good progress was being made on the winter cut. Not much change took place in mining; non-producing mines were very slack, while others were running steadily. A slight improvement was indicated in manufacturing. Local factories were maintaining their staffs and in some instances a few extra hands were being hired. The iron and steel industry was active, filling orders for auto parts, and tobacco factories were running to full capacity. Textile plants,

rubber companies, distilleries and breweries were likewise busy. Harvesting of ice had been delayed, awaiting suitable weather, but a start was expected within a week's time. Little new construction work had started. There were, however, some fairly good jobs pending and it was hoped the volume of building construction would be much better this year than last. Highway work and various relief projects continued throughout the province. Experienced cooks-general were in demand in the Women's Department. Casual work for women, however, was slow. Many applicants were available, but in some instances the required experience was lacking, thus it was difficult to place them in suitable positions.

The movement of farm labour was beginning to decline in the Prairie Provinces, partly due to the fact that the Farm Relief Act terminated January 31st. Cordwood cutters were still in demand and a number of men were sent out to the logging industry. Mines continued busy, but registered no call for miners. Manufacturing was quiet, although some factories reported a good volume of business. Building construction showed little change, severe weather putting a stop to nearly all outside work under way. Very considerable dislocation of road traffic to and from the west resulted from snow slides and provided work for a number of telegraph linemen and snow shovellers. This, however, was only of short duration. Relief camps still received their quota of unemployed. Trade was quiet and there were fewer calls for women domestic workers, with all orders for city work easily filled.

Owing to unprecedented weather conditions throughout British Columbia, all lines of work were practically at a standstill. Farm lands were inundated and no work could be done in the orchards. Logging camps, saw mills and some mines also were forced to close, due to the heavy fall of snow, although local mines at Nanaimo worked full time during the last week in January. Few men were sent out to relief camps, as roads were impassable, but hundreds of unemployed found work on railway gangs and in various municipalities as snow shovellers, in some districts every available man being so employed. Drydocks and shipyards at Prince Rupert and Victoria were fairly busy with overhaul work, and longshoring, while not so active at New Westminster, was good at Prince Rupert, Vancouver and Victoria. Building construction was very slack, no outside work being possible. The women's section was also quiet, with a decrease in applicants reported.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN DECEMBER, 1934

THE following information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on January 1 was 8,965, the employees on their payrolls numbering 883,185 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for December was 1,767 having an aggregate membership of 161,618 persons, 18.0 per

cent of whom were without employment on January 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 65 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

### (1) Employment Situation at the Beginning of January, 1935, as Reported by Employers

According to information recorded during the last fourteen years, employment has invariably declined at the beginning of January, the establishments furnishing data to the Dominion Bureau of Statistics having laid off some 59,600 workers, on the average, between December 1 and January 1 in the years, 1921-1934. At the opening of the present year, there was the customary contraction in industrial activity, but this was on a smaller scale than usual; the workers released from the staffs of the 8,965 co-operating employers numbered 40,993, or not quite 69 per cent of the average since 1920. The reported payrolls were reduced from 924,178 on December 1 to 883,185 at the first of January. This recession, besides being substantially below the average, was also the smallest on record for midwinter with only one exception, viz., January 1, 1934, when some 30,400 persons were laid off by the co-operating employers.

The January 1, 1935, index, based on the 1926 average as 100, stood at 94.4, compared with 98.9 in the preceding month, and 88.6 on the same date in 1934; in consequence of the less-than-normal reduction at the latest date, the seasonally corrected index rose to 101.2, a gain of more than three points over the adjusted figure of 97.9 for December 1, 1934. The crude index for January 1 in the preceding thirteen years was as follows:—1933, 78.5; 1932, 91.6; 1931, 101.7; 1930, 111.2; 1929, 109.1; 1928, 100.7; 1927, 95.9;

1926, 90.7; 1925, 84.9; 1924, 89.8; 1923, 87.3; 1922, 78.8 and 1921, 88.8.

As is customary at the time of year, the contractions in many instances resulted from shutdowns for inventory and over the holiday season, with the anticipation of an early resumption of activity. The experience of the last fourteen years shows that usually, (though not invariably), there is on February 1 a partial recovery from the losses recorded at the beginning of January.

The greatest curtailment on the date under review was in manufacturing establishments, but their losses, both actually and in proportion to the general decline, were very substantially below the average. The contraction in factory employment was the smallest noted in any of the years since 1920, while it constituted less than 48 per cent of the total reduction reported in all industries on January 1, 1935, compared with the proportion of 72 per cent on the same date of 1934, and with the average decrease of nearly 60 per cent in the last fourteen years. The falling-off in manufacturing at the beginning of January in other years of the record has always been followed by a revival during the month, although in no case has the recovery indicated on February 1 equalled the decline noted in the preceding report.

Within the manufacturing group, the largest losses on January 1 occurred in food, textile, lumber, leather and pulp and paper factories.

Among the non-manufacturing industries, there were pronounced seasonable decreases in logging, mining, building and highway construction and transportation, while there were smaller reductions in wholesale trade and communications. On the other hand, railway construction, hotels and restaurants and retail trade reported decided increases, those in retail stores being greater than at the beginning of any other January for which statistics are available.

persons, compared with 75,913 at the beginning of December. Improvement had been noted on January 1, 1934, but the index was then two points lower. The falling-off on the date under review is seasonal, employment having declined on January 1 in nine of the fourteen preceding years; the reduction at the latest date, however, greatly exceeded the average recession recorded in the years 1921-1934.

*Quebec.*—The contraction in Quebec was decidedly smaller than that which occurred

### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

**NOTE.**—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

### Employment by Economic Areas

All provinces recorded reduced activity. As is usual at the time of year, firms in Quebec and Ontario laid off the greatest number of workers, mainly owing to the concentration of manufacturing operations within their borders. The largest percentage decline, however, was in the Maritime Provinces. The situation in all five economic areas was distinctly better than at the beginning of January last year.

*Maritime Provinces.*—There was a decrease in employment in the Maritime Provinces on January 1; this occurred chiefly in logging, mining, construction and manufacturing; within the group of factory employment, there were considerable losses in food, lumber, textile and iron and steel plants. Statements were received from 623 firms employing 70,257

on the same date of last year, and was also considerably less than the average decline at the beginning of January in the years since 1920. The index, at 91.3 at the latest date, was five points higher than on January 1, 1934. Manufacturing (notably in iron and steel, pulp and paper, textile, food, leather, lumber and musical instruments plants), logging, transportation, building and highway construction reported the most pronounced losses, but the tendency was also downward in mining and communications. On the other hand, noteworthy improvement took place in retail trade and in railway construction, while beverage and tobacco factories were also busier. The gains in railway construction were a result of track-clearing operations following heavy snow-falls. In many cases, operations will have been resumed early in

the New Year in the establishments closed down over the holiday season and for purposes of inventory. The labour forces of the 2,131 co-operating employers aggregated 250,481 workers, as against 264,338 on December 1, 1934.

*Ontario.*—Manufacturing showed considerable curtailment in Ontario, that in vegetable food, textile and lumber factories being most noteworthy, although there were also important losses in leather, non-ferrous metal, pulp and paper, electrical apparatus, clay, glass and stone, rubber and some other groups. Iron and steel plants, however, reported marked improvement, mainly in automobile production. In the non-manufacturing industries, there were large contractions in transportation, building, highway and railway construction and mining. Retail trade and logging, on the other hand, recorded heightened activity. A combined payroll of 373,838 persons was employed by the 3,966 firms whose returns were received, and who had 388,063 employees on December 1. The contraction, though larger than that noted on January 1 of last year, was decidedly smaller than the average loss recorded at the beginning of January in the last fourteen years; the index, at 98.0, was some seven points higher than on the same date in 1934, and was also higher than at the beginning of January in either 1933 or 1932.

*Prairie Provinces.*—Declines on much the same scale as at the beginning of January, 1934, were noted in the Prairie Provinces. Statistics were tabulated from 1,319 employers of 114,730 workers, or 3,785 fewer than on December 1. Construction reported the most marked losses, but manufacturing and transportation also showed curtailment, and mining was slacker. On the other hand, improvement occurred in logging and retail trade. The reduction on the date under review was decidedly smaller than the average loss noted at the beginning of January in the years 1921-1934. The index on January 1, 1935, stood at 91.2, as compared with 86.4 on the same date of 1934.

*British Columbia.*—The recession in British Columbia involved fewer workers than that indicated on January 1, last year, when the index, at 80.4, was substantially lower than that of 88.8 on the date under review. The 926 firms furnishing data reported 73,879 employees on January 1, 1935, as against 77,349 in the preceding month. Lumber mills, logging, mining, transportation and construction recorded curtailment, while services and communications showed moderate improvement.

Index numbers of employment by economic areas are given in Table I.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS

(AVERAGE CALENDAR YEAR 1926=100)

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia
Jan. 1, 1921.....	88.8	107.6	84.2	88.8	95.0	76.7

Sept. 1.....	98.8	101.8	95.4	103.3	92.9	96.2
Oct. 1.....	100.0	103.1	96.0	104.8	95.7	95.4
Nov. 1.....	100.2	104.9	98.0	103.6	96.5	94.1
Dec. 1.....	98.9	106.9	96.4	101.7 <sup>1</sup>	94.3	92.9
Jan. 1, 1935.....	94.4	99.0	91.3	98.0	91.2	88.8
Relative Weight of Employment by Economic Areas as at Jan. 1, 1935.....	100.0	7.8	28.0	43.2	12.8	8.2

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated areas to the total number of all employees reported in Canada by the firms making returns for the date under review. <sup>1</sup>Revised index.

### Employment by Cities

There were contractions in six of the eight cities for which separate tabulations are made, firms in Montreal, Quebec City, Toronto, Hamilton, Winnipeg and Vancouver reporting reduced employment, while the tendency was upward in Ottawa and Windsor and the adjacent Border Cities. The losses generally were on a smaller scale than those recorded on January 1, 1934, and the situation in these cities was better than at the opening of last year.

*Montreal.*—The reduction in Montreal involved a much smaller number of workers than that registered on January 1 in any other year since 1920; the index, at 84·8, was over six points higher than at the beginning of January in 1934. Statements were received from 1,248 establishments with 126,485 employees, as compared with 129,296 in the preceding month. Important curtailment was shown in shipping and stevedoring and in manufacturing, especially in food, musical instrument, textile, leather and iron and steel plants. On the other hand, tobacco and beverage factories, steam railway operation, road and street construction and maintenance and retail trade were busier.

*Quebec.*—Transportation reported a considerable seasonal loss, and manufacturing and

construction also afforded less employment, while services and trade showed some improvement; the 161 co-operating employers in Quebec City reduced their staffs from 12,101 persons on December 1, to 11,640 at the beginning of January. This decline was much smaller than that indicated on January 1 of last year, when the index was lower.

*Toronto.*—Toronto firms showed a decidedly smaller seasonal contraction than on January 1 in 1934, or in fact, than on the same date in any other year for which data are available. The index, at 95·8, compared favourably with that of 90·0 at the opening of last year. There were important losses in manufacturing, the most noteworthy being in the textile, electrical apparatus, leather, pulp and paper, iron and steel and vegetable food groups; construction and transportation were also slacker, while retail stores reported very pronounced improvement. Returns were tabulated from 1,329 employers with 116,124 workers, compared with 117,472 in their last report.

*Ottawa.*—Manufacturing registered slight seasonal curtailment, but trade, construction and transportation were rather more active, the gains in the last two being due in part to the removal of snow. The result was an increase in general employment, according to

Relative Weight of Employment by Ci- ties as at Jan. 1, 1935	14·3	1·3	13·1	1·4	3·0	1·4	4·1	3·2

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated city to the total number of all employees reported in Canada by the firms making returns for the date under review.

the 167 reporting establishments, whose staffs aggregated 12,528 persons, as compared with 12,308 in the preceding month. A minor advance had been recorded on the same date last year, when the index was rather lower.

*Hamilton.*—Data were received from 267 firms in Hamilton employing 26,522 workers, as against 27,502 on December 1. Manufacturing and transportation showed reduced activity, while road and street work absorbed a larger number of employees. The declines noted on January 1, 1934, involved the release of about the same number of workers, but the index was then some six points lower.

*Windsor and the adjacent Border Cities.*—There was a further substantial improvement in the number employed in the Border Cities on January 1, 1935, this taking place almost wholly in manufacturing, notably in the automobile and related industries. Returns were compiled from 158 establishments with 11,930 persons in their employ, as compared with 10,497 in the preceding month. Activity was decidedly greater than on January 1, 1934, when a general falling-off had occurred.

*Winnipeg.*—Employment in manufacturing, communications, transportation and construction declined in Winnipeg, while other groups

showed only slight changes. The 443 co-operating firms reported 36,527 employees, compared with 37,169 in the preceding month. This contraction involved fewer workers than that recorded on January 1, 1934; employment was then in smaller volume.

*Vancouver.*—Activity was slightly reduced, on the whole, in Vancouver, according to returns from 392 employers of 27,974 persons, as compared with 28,093 on December 1. A decrease had been indicated on the same date of last year, when the index was decidedly lower. There were losses in manufacturing, but communications and local transportation were rather busier than in the preceding month, while the fluctuations in other industries were small.

Index numbers by cities are given in Table II.

### Employment by Manufacturing Industries

As already stated, the recession in employment in manufacturing was substantially less than the average indicated in the last fourteen years, involving the release of 19,530 operatives from the staffs of the co-operating establishments, as compared with an average loss of 35,300 in the period, 1921-1934. The reduction in manufacturing on January 1, 1935,

Relative Weight of Employment by Industries as at Jan. 1, 1935.....	100.0	48.9	5.6	6.1	2.3	10.0	12.9	2.8	11.4

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada by the firms making returns for the date under review.

was the smallest on record; the falling-off of 21,950 reported on January 1, 1934, was the previous low figure in this comparison, while the greatest losses yet indicated by the employers furnishing statistics were those of 72,300 on January 1, 1921. The contraction on the date under review, as in other years, was partly due to comparatively brief shut-downs for inventory and over the holiday season. In each of the fourteen years for which data are now available, employment has shown partial recovery in the weeks succeeding January 1; on the average, this has amounted up to the date of the next report viz: February 1, to nearly 51 per cent of the decline noted at the beginning of the year.

The manufacturers making returns for January 1, 1935, numbered 5,313, and their payrolls aggregated 437,719, compared with 457,249 on December 1. The index declined from 91.3 in the preceding month to 87.4 on the date

under review, but as compared with 80.0 on January 1, 1934, showed an improvement of 7.4 points on the year. After adjustment for seasonal influences, the index on the latest date was 95.2, or 2.8 points higher than on December 1.

The most extensive reductions on the date under review were in food, textile, lumber, leather and pulp and paper, but the fur, musical instrument, rubber, chemical, clay, glass and stone, electric current, electrical apparatus, iron and steel, non-ferrous metal and miscellaneous manufacturing industries also recorded important curtailment. In many cases, the declines were smaller than those noted on January 1, 1934, notably in the food, rubber, textile and iron and steel groups. Lumber, musical instruments, clay, glass and stone, electric current electrical apparatus and non-ferrous metal factories, however, reported reductions on a greater scale than at the

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY MANUFACTURING INDUSTRIES (AVERAGE 1926=100)

Industries	Relative Weight	Jan. 1 1935	Dec. 1 1934	Jan. 1 1934	Jan. 1 1933	Jan. 1 1932	Jan. 1 1931	Jan. 1 1930

<sup>1</sup>The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

beginning of last year. With rare exceptions, activity in the various groups of factory employment was greater than on January 1, 1934.

*Animal Products—Edible.*—Large reductions were reported in this division, mainly in meat and fish-preserving plants. Statements were received from 250 manufacturers with 19,782 workers, as compared with 20,504 at the beginning of December. This loss was much smaller than that recorded on January 1, 1934, when the index number was over ten points lower. All five economic areas reported reduced employment, the heaviest contractions being in the Maritime Provinces and Quebec.

*Leather Products.*—There was a seasonal decline in the leather industries at the beginning of January, particularly in boot and shoe factories. The shrinkage involved a decidedly smaller number of employees than that noted on the corresponding date last year, when the index was lower. A combined working force of 17,612 persons was registered by the 267 firms making returns, as compared with 19,117 in the preceding month. Most of the loss occurred in Quebec and Ontario.

*Lumber Products.*—Seasonal contractions on a larger scale than on January 1, 1934, were noted in lumber mills, 793 of which reduced their payrolls, from 33,665 on December 1 to 29,910 workers at the beginning of January. Employment was in decidedly better volume than at the corresponding date of last year. Sawmills registered the most pronounced decreases, but there was also curtailment in furniture, vehicle, container and other wood-using industries. There were especially marked reductions in Ontario and British Columbia, although employment generally declined.

*Musical Instruments.*—Thirty-five manufacturers of musical instruments released 750 persons from their staffs, bringing them to 744 at the beginning of January. Practically all the decrease took place in Quebec and Ontario. A smaller recession had been noted on January 1 a year ago, and the index number then was higher.

*Plant Products, Edible.*—There were seasonal reductions in employment in practically all branches of the vegetable food group, the greatest being in canning, sugar and syrup, flour and cereal, bakery, chocolate and confectionery factories. The working forces of the 425 co-operating employers totalled 26,450 persons, as compared with 29,538 in their last report. The contractions in Ontario were most pronounced; the movement however, was generally unfavourable. The declines noted at the beginning of January last year were decidedly larger, and the index number then

was some seven points lower than at the date under review.

*Pulp and Paper Products.*—The shrinkage at the beginning of January, 1935, was slightly less than that noted on the same date in 1934, when employment was in smaller volume. Statistics were received from 578 firms, whose staffs aggregated 55,806 workers, or 1,444 fewer than in their last report. There were considerable losses in Quebec and Ontario. Pulp and paper mills reported a large share of the reduction, but there were also declines in plants producing paper goods, together with smaller contractions in printing and publishing establishments.

*Rubber Products.*—Rubber factories showed a decrease, which however, was rather less than that of January 1, 1934; 52 plants had 11,420 employees on the date under review, as against 11,738 at the beginning of December. The largest losses took place in Ontario. The index number, at 89.8, compared favourably with that of 85.2 on the same date last year.

*Textile Products.*—The 923 textile firms furnishing data released a smaller proportion of their total operatives than was the case among the establishments making returns at the beginning of January, 1934; the index then was five points lower than on the date under review, when it stood at 102.5. The reported payrolls included 87,174 persons on January 1, 1935, as against 91,176 in the last report. Quebec and Ontario recorded the bulk of the shrinkage, which was especially marked in the hosiery and knit goods and garment and personal furnishing divisions.

*Tobacco, Distilled and Malt Liquors.*—There was a slight falling-off in employment at the beginning of January in the tobacco and beverage groups; statements were tabulated from 163 manufacturers in this group, employing 16,639 workers, or 89 fewer than on December 1. Improvement in Quebec was rather more than offset by declines in Ontario.

*Chemical Products.*—Employment in chemical and allied product plants showed a contraction on January 1 as compared with the preceding month, 280 persons having been released from the labour forces of the 181 reporting establishments, which had 9,228 employees. Similar declines were noted on the corresponding date a year ago, when the index number was lower.

*Clay, Glass and Stone Products.*—Further seasonal recessions in employment occurred in the production of these goods; 187 works reported an aggregate staff of 6,682, as compared with 7,538 in the preceding month. All provinces shared in this curtailment, which,

however, was most marked in Quebec and Ontario. Brick, stone and glass plants recorded important declines; these were on a larger scale than those of January 1, 1934, when employment was generally in smaller volume.

*Electric Current.*—Employment in electric current plants again declined, according to statistics from 95 producers, employing 13,839 workers, or 405 fewer than on December 1. Quebec, Ontario and British Columbia reported curtailment. Little general change had been noted at the beginning of January of last year, when the index was over five points lower.

*Electrical Apparatus.*—A decline in personnel was registered by the 106 co-operating electrical apparatus factories, whose labour forces aggregated 11,477 persons on January 1, as compared with 12,159 in the preceding month. Employment was in greater volume than on the same date of 1934, although a smaller reduction had then been noted.

*Iron and Steel Products.*—Crude, rolled and forged, heating appliance, structural iron and steel, iron pipe, sheet metal and some other iron and steel works reported considerable curtailment, while important improvement was shown in agricultural implement and automobile factories. The payrolls of the 823 firms furnishing data in the iron and steel group totalled 93,567, against 94,015 employees on December 1. This contraction, (which occurred in Quebec and the Maritime and Prairie Provinces, while the tendency in Ontario was distinctly favourable), was smaller than that noted on the same date in any other year of this record going back to 1921. The index was higher than on January 1 in 1934, 1933 or 1932.

*Non-Ferrous Metal Products.*—The loss recorded in non-ferrous metal products involved a greater number of workers than that indicated on the same date in 1934, but the index was then many points lower. Returns were compiled from 148 employers of 16,795 persons, as compared with 17,591 at the commencement of December. The most noteworthy reductions were in Ontario. An analysis of the data by industries shows that smelters and refineries and lead, tin, zinc and copper plants released most of the workers who were laid off.

*Mineral Products.*—Decreased activity was noted in this group, comparing unfavourably with the increase registered at the beginning of last year. A combined working force of 13,347 persons was employed by the 121 establishments whose returns were received,

and who had 13,361 employees on December 1. The index was higher than on January 1, 1934, standing at 132.3 at the latest date, as against 127.4 in the same month of last year.

### Logging

Logging showed a considerable decline on January 1; nevertheless, employment was decidedly more active than in January of any other year since 1920, with the exception of 1930. The index stood at 181.3, compared with 198.6 on December, 1934, and 168.8 on January 1, 1934. A combined working force of 50,593 men was reported by the 311 co-operating firms, who had 55,337 employees in the preceding month. Moderate improvement occurred in Ontario and the Prairie Provinces, while elsewhere the trend was downward.

### Mining

*Coal.*—There was a decrease in coal mines, 101 of which reduced their payrolls from 25,828 persons on December 1, to 25,261 at the beginning of January. There were losses in both eastern and western coal fields. The index number on January 1, 1934, was slightly lower, although employment had then shown an advance over the preceding month.

*Metallic Ores.*—A moderate decrease was noted in metallic ore mines, according to data from 141 firms who employed 23,800 persons at the beginning of January, as compared with 24,404 in their last report. The index was decidedly higher than at the same date of last year, when only small losses had occurred.

*Non-Metallic Minerals (Other than Coal).*—The trend of employment in this division continued seasonally downward; the reductions were on a rather larger scale than on January 1 a year ago, but the index was then some five points lower. Statements were received from 77 firms employing 5,351 workers, as compared with 5,911 in the preceding month. All provinces except British Columbia recorded curtailment.

### Communications

Further losses took place on telephones and telegraphs; the situation was practically the same as that indicated on the same date in 1934, when decreases were also noted. The payrolls of the companies and branches furnishing data declined from 20,946 on December 1, to 20,612 employees at the beginning of January.

### Transportation

*Street Railways and Cartage.*—Employment in local transportation showed a slight

seasonal contraction, involving fewer workers than that noted on January 1, 1934, when the index number was practically the same. A combined staff of 24,060 persons was reported by the 196 co-operating firms, who had 24,120 employees in the preceding month. There were reductions in Ontario and the Prairie Provinces, while Quebec and British Columbia recorded improvement.

*Steam Railways.*—Steam railway operation showed a pronounced decline, improvement in the Maritime Provinces being more than offset by contractions elsewhere. The payrolls of the 101 companies and divisional superintendents furnishing returns aggregated 55,333 persons, as against 56,471 in their last report. Little general change had been recorded on the same date last year, when the index was 0.2 points higher than that of 69.6 on January 1, 1935.

*Shipping and Stevedoring.*—There was a large seasonal reduction in employment in water transportation, chiefly in Quebec and Ontario, while an increase, also seasonal in character, was noted in the Maritime Provinces. A smaller number of workers was let out than on January 1, 1934, when the index was practically the same. Returns for the date under review were compiled from 96 employers of 10,535 men, compared with 14,010 in the preceding month.

### Construction and Maintenance

*Building.*—Continued seasonal curtailment of operations was shown in building construction; 657 contractors reduced their staffs from 22,319 at the beginning of December to 18,336 on January 1. The most pronounced declines were in Quebec and Ontario, although there were losses in all five economic areas. Rather smaller decreases had been indicated on January 1 last year, but the index was then some twelve points lower.

*Highway.*—Statements were received from 324 firms employing 61,064 workers, or 12,430 fewer than on December 1. Important losses occurred in all Provinces. Road construction

generally afforded less employment than in the winter of 1933-1934.

*Railway.*—An upward movement was shown in this division, in which 35 employers reported 23,640 persons on their payroll, as compared with 21,788 in the preceding month; the gain was chiefly due to snow-clearing operations following severe storms. The index was the same as on January 1 of a year ago, when gains had been noted. Ontario and the Western Provinces recorded decreases on the date under review, while heightened activity was indicated in the Maritime Provinces and Quebec.

### Services

Little general change occurred in services, in which 433 firms employed 24,642 persons, or 206 more than in the preceding month. There was an increase in hotels and restaurants, but the other divisions of the group showed curtailment. Improvement had taken place at the beginning of January, 1934, when the index was lower.

### Trade

Trade afforded considerably more employment than on December 1, the improvement on the whole being much greater than at the beginning of any other January for which statistics are available. There were moderate seasonal losses in wholesale establishments, but the additions to staffs in retail stores were exceptionally large. The 1,097 co-operating employers had 102,239 persons on their staffs, compared with 97,865 in their last report. Employment was brisker than in any other month since the beginning of January, 1931.

### TABLES

The accompanying tables give index numbers of employment by economic areas, leading cities and industries. The columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on the date indicated.

## (2) Unemployment in Trade Unions at the Close of December, 1934

Unemployment as used in the accompanying article has reference to involuntary idleness due to economic causes. Persons who are occupied at work other than their own trades or who are idle due to illness are not considered as unemployed, while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month, with

consequent variations in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Further declines in the volume of work afforded, though on a small scale, were apparent among local trade unions during December, seasonal quietness combined with

the slowing up of activity consequent upon the holiday season influencing the situation adversely at the close of the month. This was apparent from the reports tabulated from 1,767 labour organizations, with a combined membership of 161,618 persons. Of these, 29,112 were without work at the end of the month, a percentage of 18.0, in comparison with 17.5 per cent of inactivity in November. A higher level of employment was reflected, however, than at the close of December, 1933, when 21.0 per cent of unemployed members was noted. Seasonal dullness in the fishing industry in British Columbia and in transportation, both navigation and

unions also showed an upward employment trend, though the gains recorded from November were but fractional. When contrasting with the returns for December, 1933, Alberta unions reported substantial improvement during the month under review, due in large measure to the considerably better conditions obtaining for coal miners and building tradesmen, though employment generally throughout the various trades and industries was on a higher level. In Ontario and Nova Scotia also, employment advancement on a noteworthy scale was shown, New Brunswick, Manitoba and Saskatchewan unions indicating gains of more moderate propor-

#### PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

steam railway operation, was mainly responsible for the moderate drop in activity reported from that province when compared with November. In Ontario, the manufacturing industries, particularly the pulp and paper, and textile divisions and the lumbering and transportation industries all combined to effect an unfavourable employment balance during December, while in Saskatchewan retarded activity in transportation was almost wholly accountable for the slight change noted. On the contrary, Quebec and Alberta unions showed some employment expansion, which in the former province was most predominant in the manufacturing industries and in the latter, among the coal mines. Nova Scotia, New Brunswick and Manitoba

tions. British Columbia unions, however, reported a fair-sized drop in activity from December a year ago, the fishing industry accounting largely for this adverse change, and in Quebec there was a general downward employment trend during the month reviewed.

Each month the reports on unemployment from the largest city in each province, with the exception of Prince Edward Island, are tabulated separately. Saint John unions reported marked improvement in conditions from November and in Montreal, Edmonton and Halifax increases in activity on a considerably smaller scale were noted. Little variation was evident in the employment level among Winnipeg unions from November, though the tendency was favourable. Van-

couver and Toronto unions indicated a slowing up of industrial activity when compared with the previous month, of rather moderate degree, and in Regina minor contractions in employment were reported. Saint John members, as in the previous comparison, were much better engaged than in December a year ago and in Edmonton substantial recovery was shown. Toronto, Halifax and Winnipeg unions also recorded gains in employment of noteworthy degree, and in Regina there was some slight expansion. The situation in Vancouver was considerably quieter than in December, 1933, and in Montreal there was a slight lessening of the employment volume available.

The chart, which accompanies this article, illustrates the trend of unemployment by months from January, 1928, to date. As shown by the curve, 1934 has been a more favourable year than either 1933 or 1932, the level of the curve each month being below that of the corresponding month in the two preceding years. Employment conditions were at their best for the year in October, when the percentage of idleness stood at 16.2, the January percentage of 21.2 constituting the maximum of unemployment during 1934. There was but little variation in the volume of work afforded during January from December, 1933, though the tendency was toward lessened employment. In February, however, activity as represented by the curve was at a slightly higher level than in January and the situation continued to improve without interruption until the close of October, though the change from month to month was slight. In November, due largely to employment curtailment of a seasonal nature, the curve showed a slight rise from October and extended further in this upward course to the close of the year.

A favourable employment trend from the previous month, was noted in the manufacturing industries during December, though the change was very slight, the 481 labour organizations making returns with 49,416 members reflecting an unemployment percentage of 17.8, in contrast with 18.0 per cent in November. Improvement on a more substantial scale, however, was shown from December a year ago, when 23.4 per cent of the members reported were without work. Textile and carpet workers, general labourers and gas workers were much better engaged than in November and in the garment trades moderate increases in activity were noted. There was little variation in the employment level among iron, steel and leather workers, and bakers and confectioners from November, though the tendency was toward a greater em-

ployment prevalence. Of the recessions which were nearly sufficient to offset these gains the most pronounced were registered by hat, cap and wood workers and metal polishers, with contributing declines, on a smaller scale, among fur and glass workers, paper makers and cigar makers. In the printing trades

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Average 1919.....	3.1	2.0	3.4	2.7	2.1	3.2	2.0	7.9	3.4

the percentage of idleness remained the same as in November. The majority of trades participated in the more favourable employment movement noted from December, 1933, cigar makers, textile and carpet, hat and cap, leather, fur and glass workers and general labourers particularly showing extensively improved conditions during the month reviewed. Among brewery workers and paper makers also the gains were substantial and the iron, steel and printing trades and metal polishers showed noteworthy advancement. Fractional gains only were reported by bakers and confectioners. Wood workers, however, suffered severe losses in available work and garment workers were considerably slacker than in December a year ago.

Coal mining, on the whole, employed larger working forces during December than in either the previous month or December of 1933, unemployment standing at 3.9 per cent, as compared with percentages of 5.4 in November and 6.8 at the close of December a year ago. The December percentage was based on the returns compiled from 51 unions of these workers, with a total 16,505 members, 641 of whom were idle at the end of the month. The Alberta mines absorbed the bulk of the expansion noted over both the previous month and December, 1933, the improvement in the latter comparison being substantial, while in Nova Scotia also activity tended favourably, though the changes were very slight. British Columbia miners, however, showed a sharp drop in employment from December a year ago, but the recessions indicated from November were small. A number of unions of these miners continued to show a substantial proportion of their working membership on short time.

Unemployment in the building and construction trades eased up slightly during December, the 207 organizations from which reports were tabulated, with a combined membership of 17,212 persons, showing 58.6 per cent of idleness, compared with a percentage of 61.6 in November. Pronounced gains in activity were recorded over December, 1933, when 69.1 per cent of the members reported were out of work. Hod carriers and building labourers, electrical workers and tile layers, lathers and roofers indicated employment revival on a large scale when compared with November. Improvement of much lesser degree was apparent among painters, decorators and paperhangers, and plumbers and steamfitters, while the situation for carpenters and joiners was but nominally better. On the other hand, bridge and structural iron workers, whose reported membership was small, were much

slacker than in November and activity for bricklayers, masons and plasterers, steam shovelmen and granite and stonecutters was somewhat curtailed. When a comparison is made with the returns for December, 1933, hod carriers and building labourers, painters, decorators and paperhangers, tile layers, lathers and roofers, and carpenters and joiners all were afforded a much greater volume of employment during the month reviewed, and the situation for plumbers and steamfitters, and steam shovelmen improved considerably. Among electrical workers and bricklayers, masons and plasterers increases in activity on a moderate scale were reported. There was, however, noteworthy curtailment in work afforded bridge and structural iron workers from December a year ago and among granite and stonecutters some falling off in activity was evident.

The transportation industries during December showed little variation in conditions from the preceding month, what slight change was noted being in an unfavourable direction. This was manifest by the returns compiled from 782 organizations, representing a total of 54,112 members, 6,140, or 11.3 per cent of whom were idle at the end of the month, in comparison with 10.4 per cent in November. A rise in employment on a rather small scale was noted from December, 1933, when 13.4 per cent of unemployment was recorded. Navigation workers suffered important losses in activity from November and among steam railway employees, whose returns included about 80 per cent of the entire group membership reported, there was but a fractional adverse change. Among street and electric railway employees, and teamsters and chauffeurs the variation from November was so slight as to be practically negligible. Steam railway employees were almost entirely responsible for the gain in work affected in the transportation industries, as a whole, when compared with December, 1933, though activity for street and electric railway employees tended slightly upward. Conditions for navigation workers, however, were considerably more depressed than in December a year ago and the drop in employment was much heavier than that shown in comparison with the previous month. Teamsters and chauffeurs reflected but nominal declines during the month reviewed.

Activity for retail shop clerks was slightly retarded at the end of December from the preceding month, the 6 unions from which reports were received, embracing 2,409 members, showing an unemployment percentage of 7.8, compared with 5.9 per cent in November. A fully engaged situation was

indicated among these workers at the close of December, 1933.

Civic employees were not quite so busily engaged during December as in either the previous month or December a year ago, unemployment standing at 3·8, in comparison with percentages of 1·2 in November and 2·8 in December, 1933. The percentage for the month surveyed was based on the reports compiled from 78 associations, representing 7,481 members, 288 of whom were idle at the end of the month.

The situation in the miscellaneous group of trades as indicated at the close of December remained identical with that of the previous month, the 116 unions making returns with a total of 3,905 members showing that 601 were unemployed at the end of the month, a percentage of 15·4, the same percentage as was registered at the close of the preceding month. Fluctuations, however, were apparent in the various groups of trades, theatre and stage employees showing fair-sized gains in activity when compared with November, and hotel and restaurant employees, and barbers improvement on a smaller scale. Recessions of counteracting influence, however, were reflected by unclassified workers and stationary engineers and firemen. A higher level of employment was manifest in the miscellaneous group of trades than in December, 1933, when 19·8 per cent of idleness was reported, stationary engineers and firemen showing increases in activity on a pronounced scale. Gains of lesser degree,

though noteworthy, were recorded by theatre and stage employees, while the tendency for hotel and restaurant employees, and barbers was but slightly upward. Unclassified workers alone indicated an unfavourable movement from December a year ago.

Fishermen were very slack during December, the percentage of idleness standing at 88·8, as compared with a percentage of 83·3 at the close of November and with 25·0 per cent in December, 1933. For December reports were compiled from 3 associations of these workers with 694 members, 616 of whom were reported idle on the last day of the month.

Lumber workers and loggers registered a substantial drop in employment during December from the previous month, but the curtailment shown from December, 1933, was much more extensive. This was evident from the reports tabulated from 4 unions involving a membership of 1,450 persons, 733, or 50·6 per cent of whom were idle at the end of the month, in contrast with 38·8 per cent in November and 19·0 per cent at the end of December, 1933.

Table I shows by provinces the percentage of members who are on an average unemployed each year from 1919 to 1933, inclusive, and also the percentage of unemployment by provinces for December of each year from 1919 to 1931, inclusive, and for each month from January, 1932, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

### (3) Employment Office Reports for December, 1934

The volume of business transacted by the offices of the Employment Service of Canada during the month of December, 1934, showed declines in the average daily placements of 7 per cent and 19 per cent respectively when the records were compared with the previous month and also with those of December a year ago. Under the first comparison all groups recorded losses, those in construction and maintenance and services being the largest. The former division was also almost wholly responsible for the heavier decline reported under the second comparison, although increased placements in farming logging and services, part of which was due to the placing of applicants under the Farm Relief Act, helped to offset the total loss registered.

The accompanying chart shows the trend of employment since January, 1932, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Ser-

vice throughout Canada, compilations being made semi-monthly. It will be seen from the graph that the curves of vacancies and placements in relation to applications showed a sharp upward trend throughout the month, and at the close of the period under review both levels were 11 points above those shown at the end of December, 1933. The ratios of vacancies to each 100 applications was 62·7 and 72·9 during the first and second half of December, 1934, in comparison with ratios of 65·6 and 61·6 during the same periods of 1933. The ratios of placements to each 100 applications during the periods under review were 59·1 and 69·6 as compared with 62·7 and 58·6 during the corresponding month of 1933.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during December, 1934, was 1,287 as compared with 1,378 during the preceding month and with 1,588 in December a year ago.

The average number of applications for employment received daily by the offices during the month under review was 1,910 in comparison with 2,241 in November and 2,488 in December, 1933.

The average number of placements made daily by the offices of the Service during December, 1934, was 1,221, of which 585 were in regular employment and 636 in work of one week's duration or less, as compared with a total daily average of 1,315 during the preceding month. Placements in December a

for work, and 37,807 placements in regular and casual employment.

During the year 1934 the offices of the Service throughout Canada reported 427,792 vacancies, 724,365 applications and 406,091 placements in regular and casual employment, a gain of 15 per cent over the placements effected during the preceding year, 1933.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1924, to date:—

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o-o-o-o-o-o

year ago averaged 1,513 daily, consisting of 574 placements in regular and 939 in casual employment.

During the month of December, 1934, offices of the Service referred 31,673 persons to vacancies and effected a total of 30,513 placements. Of these, the placements in regular employment were 14,613, of which 11,041 were of men and 3,572 of women, while placements in casual employment totalled 15,900. The number of vacancies reported by employers was 24,439 for men and 7,726 for women, a total of 32,165, while applications for work numbered 47,746, of which 37,827 were from men and 9,919 from women. Reports for November, 1934, showed 35,809 positions available, 58,243 applications made, and 34,189 placements effected while in December, 1933, there were recorded 39,683 vacancies, 62,193 applications

1934.....	223,564	182,527	406,091

NOVA SCOTIA

Employment opportunities, as indicated by orders received at employment offices in Nova Scotia during December, were over 20 per cent less than in the preceding month and more than 10 per cent below the corresponding

month of 1933. There was a decline also in placements of nearly 20 per cent in comparison with November and of nearly 12 per cent when compared with December a year ago. The decline in placements from December, 1933, was due to the curtailment of relief work on road construction, as small changes only were reported in all other groups. Placements by industrial divisions included construction and maintenance 626; trade 28; and services 299, of which 221 were of household workers. During the month 181 men and 79 women were placed in regular employment.

#### NEW BRUNSWICK

During the month of December positions offered through employment offices in New Brunswick were nearly 9 per cent less than in the preceding month and over 37 per cent below the corresponding month of 1933. There was a decline of over 9 per cent in placements when compared with November and of 37 per cent in comparison with December, 1933. A large reduction in relief placements on road construction accounted for the decline from December a year ago as a loss in manufacturing was nearly offset by a gain in services, and there were small changes only in all other groups. Placements under construction and maintenance numbered 119, and in services 525. Of the latter, 423 were of household workers. Placements in regular employment numbered 130 of men and 74 of women.

#### QUEBEC

There was a decline of over 8 per cent in the number of positions offered through employment offices in the Province of Quebec during December when compared with the preceding month, but a gain of nearly 62 per cent in comparison with the corresponding month of 1933. Placements were nearly 12 per cent less than in November, but over 79 per cent above December a year ago. Placements in logging, construction and maintenance, and services were considerably higher than during December, 1933, and accounted for the gain under this comparison. Small losses were reported in mining and manufacturing. Industrial divisions in which most of the placements were effected during the month were manufacturing 66; logging 1,024; construction and maintenance 610; trade 98; and services 1,668, of which 1,469 were of household workers. There were 1,739 men and 1,141 women placed in regular employment during the month.

#### ONTARIO

The demand for workers, as indicated by orders received at employment offices in

Ontario during December, was over 4 per cent less than in the preceding month and nearly 37 per cent below the corresponding month of 1933. There was a decline of nearly 3 per cent in placements when compared with November and of over 36 per cent in comparison with December a year ago. The large decline in placements from December, 1933, was almost entirely due to the curtailment of relief work on road construction, supplemented by small losses in services and logging. Gains were reported in manufacturing and farming. Placements by industrial divisions included manufacturing 431; logging 678; farming 246; transportation 111; construction and maintenance 9,105; trade 300; and services 2,792, of which 1,717 were of household workers. There were 1,806 men and 1,042 women placed in regular employment during the month.

#### MANITOBA

During December, 1934, employment offices in Manitoba received orders for over 17 per cent less workers than in the preceding month, but over 2 per cent more than during the corresponding month of 1933. There was a decline of nearly 17 per cent in placements when compared with November and of nearly 3 per cent in comparison with December a year ago. Farm placements were considerably higher than during December, 1933, and there was a moderate increase in services. These gains, however, were more than offset by declines in construction and maintenance, and logging. The reduction in relief placements on road construction was slightly larger than placements on farms and the decrease in logging was greater than the gain in services. The changes in other groups were unimportant. Placements by industrial divisions included logging 249; farming 2,104; construction and maintenance 317; and services 737, of which 671 were of household workers. Placements in regular employment numbered 2,593 of men and 476 of women.

#### SASKATCHEWAN

Orders received at employment offices in Saskatchewan during December called for nearly 5 per cent less workers than in the preceding month and nearly 8 per cent less than during the corresponding month of 1933. There was a decline of over 8 per cent in placements when compared with November and of over 5 per cent in comparison with December a year ago. There was a large decrease in relief placements on road construction when compared with December, 1933, supplemented by small losses in manufacturing and logging. These declines were largely offset

## REPORT OF THE EMPLOYMENT OFFICES FOR THE MONTH OF DECEMBER, 1934

\* 188 placements effected by offices since closed.

by gains in farming, services and mining. Industrial divisions in which most of the placements were effected during the month were logging 74; farming, 1,172; mining, 79; construction and maintenance, 373; trade, 41; and services, 688, of which 523 were of household workers. During the month 1,438 men and 379 women were placed in regular employment.

#### ALBERTA

Opportunities for employment, as indicated by orders received at employment offices in Alberta during December, were nearly 16 per cent less favourable than in the preceding month, but over 24 per cent better than during the corresponding month of 1933. There was a decline of over 20 per cent in placements when compared with November, but a gain of over 17 per cent in comparison with December a year ago. The increase in placements over December, 1933, was due to gains in farming, construction and maintenance, logging, and services. The only decline of importance was in mining. Placements by industrial divisions included logging 210; farming 665; construction and maintenance 1,213; and services 370, of which 292 were of household workers. There were 1,913 men and 200 women placed in regular employment during the month.

#### BRITISH COLUMBIA

Orders received at employment offices in British Columbia called for over 23 per cent less workers than in the preceding month and over 19 per cent less than during the corresponding month of 1933. Placements also were nearly 23 per cent less than in November and over 18 per cent below December a year ago. All industrial divisions except services and manufacturing, in which minor gains only were reported, participated in the reduction in placements from December, 1933; the only decline of importance, however, was in construction and maintenance due to the curtailment of relief work on road construction. Placements under construction and maintenance numbered 2,449, and in services 674. Of the latter, 464 were of household workers. During the month 1,241 men and 181 women were placed in regular employment.

#### Movement of Labour

During the month of December, 1934, the offices of the Employment Service of Canada effected 14,613 placements in regular employment, 8,100 of which were of persons for whom the employment found was outside the immediate locality of the offices at which

they were registered. Of the latter, 515 were allowed the Employment Service reduced transportation rate, 417 proceeding to centres within the same province as the despatching office and 98 to other provinces. The reduced transportation rate which is 2.7 cents per mile with a minimum fare of \$4 is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Quebec offices granted 44 certificates for reduced transportation during December, of which 38 were provincial and 6 interprovincial. The latter were issued at the Hull office to bushmen, of whom 5 went to Pembroke and one to Sudbury. Within the province the movement was also of bushmen, travelling from Quebec to employment within the same zone. Business transacted by Ontario offices during December involved the issue of 177 reduced rate certificates, all to provincial points. Of these, 137 were granted at Port Arthur to 116 bush workers, 13 mine workers, and 8 restaurant workers, conveyed to centres within the Port Arthur zone. From Sudbury there were transfers of 24 bush workers, and from Fort William of 10 bush workers within their respective zones, the Sudbury zone also receiving one sawmill labourer from Toronto. Proceeding to the Windsor zone were 2 pattern makers sent from Hamilton and one tool maker from Oshawa, while to the North Bay zone one moulder was transferred from Timmins and one blacksmith from Pembroke. In Manitoba, 100 persons were transported at the reduced rate during December, 8 within the province and 92 to points outside. All of these travelled on certificates secured at Winnipeg, from which centre 3 tractor operators, 2 mine workers, 2 farm hands, and one lumber trimmer went to situations within the Winnipeg zone. Included among the transfers outside the province were 83 bushmen, 3 domestics, 2 farm hands, one hotel chef, one blacksmith, and one miner going to various centres within the Port Arthur zone, and one lumber piler to Prince Albert. Saskatchewan offices issued 48 reduced rate certificates during December, all to points within the province. This provincial movement was largely of bushmen, the Yorkton office despatching 30 and the Prince Albert office 14 within their respective zones. To Yorkton also 2 bushmen were conveyed from Regina, while the Prince Albert zone was, in addition, the destination of one bushman journeying from Saskatoon and of one domestic from Regina. Transfers at the reduced rate in Alberta during December totalled 140, and were effected entirely by the Edmonton office

which despatched 132 bush workers, 4 mine workers, 2 farm domestics, one farm hand and one hotel waitress to employment at various points within its own zone. In British Columbia 6 workers took advantage of the Employment Service reduced transportation rate during December, these going to provincial employment and transferred from Vancouver. To centres within the territory covered by the Vancouver office were

despatched 3 mine workers and one cafe cook, while the Kamloops zone received 2 mine workers.

Of the 515 persons who were transported at the Employment Service reduced transportation rate during December, 412 journeyed by the Canadian National Railways, 96 by the Canadian Pacific Railway, 4 by the Pacific Great Eastern Railway, 2 by the Northern Alberta Railway, and one by the Temiskaming and Northern Ontario Railway.

#### (4) Building Permits Issued in Canada during December, 1934

The building permits issued by 61 cities in December, 1934, represented construction work valued at \$2,496,535, as compared with \$2,606,868 in November, 1934, and \$1,983,292 in December, 1933. There was, therefore, a decrease of \$110,333 or 4.2 per cent in December as compared with the preceding month, but an increase of \$513,243 or 25.9 per cent in the more significant comparison with the same month of 1933. The value of the building authorized during 1934 was \$26,828,209, an increase of \$5,051,713 or 23.2 per cent over the total for 1933; the 1933 figures are based on revised statistics furnished by city officials, while those for 1934 are at present unrevised. Revised figures for 1934 will be published next month.

Detailed statements were received from some 50 cities, showing that they had issued some 125 permits for dwellings valued at more than \$400,000 and over 450 permits for other buildings at an estimated cost of about \$1,900,000. There were also four permits taken out for engineering work at a cost of \$104,000. During November, the construction of some 250 dwellings and 1,500 other buildings was authorized; these were estimated to cost approximately \$900,000 and \$1,605,000, respectively.

As compared with the preceding month, Ontario, Manitoba and Alberta reported increases in the value of the authorized building, Alberta showing the greatest gain of \$144,074 or 230.8 per cent. Declines were indicated in the remaining provinces, that of \$237,597 or 48.3 per cent in Quebec being most pronounced.

Prince Edward Island, Nova Scotia, Ontario, Manitoba, Alberta and British Columbia recorded increases as compared with December, 1933, in the value of the building authorized. In this comparison, Ontario reported the greatest gain of \$826,568 or 83.6 per cent. Of the reductions in the remaining provinces, that of \$583,961 or 69.7 per cent in Quebec was most marked.

Of the four largest cities, Toronto registered increases, both as compared with November, 1934, and December, 1933. Vancouver reported a decline as compared with November, 1934, but an increase over December, 1933, while Montreal and Winnipeg showed reductions in the value of the building permits issued in each comparison. Of the smaller centres, New Glasgow, Moncton, Saint John, Shawinigan Falls, Brantford, Chatham, Hamilton, Niagara Falls, Oshawa, Peterborough, Port Arthur, St. Thomas, Sarnia, York and East York, Welland, Walkerville, Woodstock, St. Boniface, Calgary, Lethbridge and Nanaimo recorded advances as compared with the preceding month, and also with December, 1933.

#### *Cumulative Record for 1934*

The following table shows the value of the building authorized by 61 cities during the Decembers of the years since 1920, and also for the completed years; the 1934 figures are unrevised, while for preceding years the statistics are revised. Index numbers, based upon the total value of the building authorized by these cities during 1926 as 100, are given below, as are the average index numbers of wholesale prices of building materials in the years 1920-34.

Year	Value of permits issued in December	Value of permits issued in twelve months	Indexes of value of permits issued in twelve months (1926=100)	Average indexes of wholesale prices of building materials, twelve months (1926=100)
1934.....	\$ 2,496,535	\$ 26,828,209	17.2	83.0
1933.....	1,983,292	21,776,496	13.9	78.3
1932.....	1,569,255	42,319,397	27.1	77.2
1931.....	7,895,106	112,222,845	71.8	81.0
1930.....	15,440,281	166,379,325	106.4	90.9
1929.....	14,688,682	234,944,549	150.2	99.0
1928.....	16,095,160	219,105,715	140.1	97.1
1927.....	11,755,566	184,613,742	118.0	96.1
1926.....	11,508,818	156,386,607	100.0	100.0
1925.....	7,363,777	125,029,367	79.9	102.9
1924.....	6,463,319	126,583,148	80.9	106.6
1923.....	6,974,256	133,521,621	85.4	111.8
1922.....	9,517,402	148,215,407	94.8	108.7
1921.....	5,537,330	116,794,414	74.7	122.7
1920.....	4,844,354	117,019,622	74.8	144.0

The unrevised statistics for 1934 indicate that last year's aggregate was 23·2 per cent higher than in 1933, though it was lower than in other years since 1920; in this connection, it

should be noted that the Bureau's index numbers of wholesale prices of building materials were also lower in 1934 than in any year from 1920 to 1930.

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND UNITED STATES

### Great Britain

Employment at 17th December showed some improvement as compared with 26th November. It continued to improve in coal mining, in the cotton and motor vehicle industries and in the distributive trades. Some improvement was also recorded in general engineering, hat and cap manufacture, the glass bottle industry, printing and bookbinding, and hotel, boarding house, etc. service. On the other hand, there was a further decline in the building industry and in tinplate manufacture, and some reductions in employment also occurred in the pottery, boot and shoe, woollen and worsted, hosiery and leather industries.

The improvement in employment was most marked in North-East England, while there was also some improvement in London and in the South-Western and North-Western counties of England; but there was a slight decline in Scotland. In London and South-East England employment continued fairly good, and in the South-West and Midlands it was still fair. In the North of England, in Scotland and in Northern Ireland it remained bad, and in Wales very bad.

Among those workpeople of ages 16-64 who were insured against unemployment in Great Britain and Northern Ireland the percentage unemployed at 17th December, 1934 (including those temporarily stopped as well as those wholly unemployed), was 16·1, as compared with 16·4 at 26th November, 1934, and with 17·5 at 18th December, 1933. The percentage wholly unemployed at 17th December, 1934, was 13·8, as compared with 13·9 at 26th November, 1934; while the percentage temporarily stopped was 2·3, as compared with 2·5. For males alone the percentage at 17th December, 1934, was 18·5 and for females, 9·7; at 26th November the corresponding percentages were 18·8 and 10·0.

At 17th December, 1934, the number of persons on the Registers of Employment Exchanges in Great Britain was 1,717,005 wholly unemployed, 288,257 temporarily stopped, and 80,553 normally in casual employment, making a total of 2,085,815. This was 34,970 less than a month before, and 138,264 less than a year

before. The total included 1,686,507 men, 56,277 boys, 299,192 women, and 43,839 girls.

The persons on the Registers included 963,038 persons with claims for insurance benefit, 769,538 insured persons with applications for transitional payments; 227,061 insured persons (including 17,013 insured juveniles under 16 years of age) not in receipt of insurance benefit or transitional payments, and 126,178 uninsured persons. In Great Britain and Northern Ireland the total number of persons on the Registers of Employment Exchanges at 17th December, 1934, was 2,150,741.

### United States

*Manufacturing Industries.*—Factory employment and pay rolls increased from November to December. The employment increase is contrary to the movement shown in 12 of the 15 preceding years. Declines in pay rolls in December have been shown in 8 of the 15 preceding years.

Employment increased 1·7 per cent from November to December and pay rolls increased 6·2 per cent. Forty-four of the 90 manufacturing industries surveyed reported gains in employment in December, and 62 industries reported increased pay rolls. Industries of major importance in which gains in both employment and pay rolls were reported in December were: automobiles, blast furnaces-steel works-rolling mills, foundries and machine shops, machine tools, hardware, woollen, cotton, silk, dyeing and finishing textiles, and boots and shoes.

The Bureau of Labour Statistics' index of factory employment for December, 1934, is 78·1 (preliminary) and the December index of factory pay rolls is 63·2 (preliminary). The level of employment in December, 1934, was 5 per cent above the level of the December, 1933, index (74·4) and pay rolls, were 16 per cent above the level of the December, 1933, index (54·5). The base used in computing these indexes is the average for the 3-year period, 1923-1925, which is taken as 100.

The levels of employment and pay rolls in the separate industries in December, 1934, compared with December, 1933, shows in-

creased employment over the year interval in 62 industries and larger pay rolls in 76 of the 90 industries surveyed.

Employment for the 12-month period ending December, 1934, was 14.2 per cent above the annual average of 1933, 22.9 per cent above the annual average of 1932, and 1.8 per cent above the 1931 average. A similar comparison of pay rolls for the 12 months of 1934 with the annual average of 1933 showed a gain of 27.6 per cent, and compared with the 12-month average of 1932, an increase of 34.3 per cent. The annual average of pay rolls for 1934 was 8.3 per cent below the 12-month average of 1931.

The indexes of factory employment and pay rolls are computed from returns supplied by representative establishments in 90 important manufacturing industries of the country. Reports were received in December from 25,288 establishments employing 3,605,568 workers whose weekly earnings were \$71,080,570 during the pay period ending nearest December 15. The employment reports received from these co-operating establishments cover more than 50 per cent of the total wage earners in all manufacturing industries of the country.

*Non-manufacturing Industries.*—Increases in employment from November to December were shown in 6 of the 18 non-manufacturing industries surveyed monthly by the U.S. Bureau of Labor Statistics and increases in pay rolls were reported in 9 of these industries.

The most pronounced changes over the month interval were seasonal in character. Retail trade establishments, reflecting expansion for holiday trade showed a gain of 8.5 per cent in employment. The group of department stores, variety stores, general merchandise, and mail-order establishments which is most affected by Christmas trade reported an increase of 27.0 per cent in number of workers. In the remaining 53,698 retail trade establishments for which data were available, employment increased 2.3 per cent over the month interval.

Employment in the metalliferous and anthracite mining industries increased 2.8 per cent and 1.4 per cent, respectively, over the month interval. The gains in employment in the remaining 3 industries reporting increases (brokerage, insurance, and real estate) were 0.3 per cent or less.

Among the 12 non-manufacturing industries reporting decreased employment from November to December, the greatest declines were shown in the quarrying and non-metallic mining and the building construction industries. These industries are adversely affected by winter weather. The quarrying industry showed a decrease of 15.1 per cent in employment over the month interval and employment in the building construction industry based on reports supplied by 10,188 contractors employing 70,160 workers in December showed a falling-off of 10.7 per cent.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

REFERENCE was made in the January issue of the LABOUR GAZETTE (pp. 24-25) to amendments made to what are known as the "B" Conditions of the Fair Wages Policy of the Government of Canada applicable to contracts made by various departments of the Federal Government for fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers and other Government officers and employees; mail bags, letter boxes and other postal stores. The fair wages conditions in question were sanctioned by an Order in Council passed on December 31, 1934, and became effective from that date.

The new Fair Wages Clause applicable to all contracts for the manufacture and supply to the Government of the above-mentioned fittings and supplies is as follows:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time

to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rate in such district, then a fair and reasonable rate. In no event shall the wages be less than those set out in the schedule of minimum rates hereunder. The working hours shall be those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor, shall adjust the wages and hours and classification of work so as to give effect to such decision. In the event of a dispute arising as to what is the current or a fair and reasonable rate of wages, or what are

the current hours fixed by the custom of the trade or fair and reasonable hours, or as to rates for overtime, it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with. By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

#### *Schedule of Minimum Wage Rates*

Males (18 years of age or over), 30 cents an hour minimum.

Females (18 years of age or over), 20 cents an hour minimum.

Males and Females under 18 years of age shall not receive less wages than those provided for women and girls in the Minimum Wage Scale of the province in which this work is performed.

In certain of the Maritime Provinces where no minimum wage legislation is in effect, the contractors shall pay to males and females under 18 years of age wages not less than those provided for women and girls in the Minimum Wage Act of the Province of Nova Scotia.

In any province where the Minimum Wage legislation requires payment of wages in excess of those above set out, such higher rates shall apply on this work.

The Fair Wages Policy of the Dominion Government with respect to contracts "for construction, remodelling, repair or demolition of any work" is set forth in an Act of Parliament adopted on May 30, 1930, entitled "The Fair Wages and Eight-Hour Day Act" (chapter 20-21, Geo. V). The full text of this measure appeared in the *LABOUR GAZETTE*, April, 1930, page 383. The Fair Wages and Eight-Hour Day Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repairs or demolition of any work shall be subject to the following conditions respecting wages and hours:—

(a) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(b) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or, except in cases of emergency, as may be approved by the Minister.

The Fair Wages Policy was originally adopted in 1900 and was expressed in an

Order in Council of June 7, 1922, which was subsequently amended by Order in Council of April 9, 1924. The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wages rates for the different classes of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the Department concerned in the terms of contract.

In addition to the requirements of the Fair Wages and Eight-Hour Day Act, government contracts for the construction, remodelling, repair or demolition of any work, contain a number of other provisions known as the "A" conditions, for the protection of the workmen employed, which are sanctioned by the foregoing Orders in Council.

Both in the case of contracts for building and construction work, and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates and working hours.

The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and address of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed, claim therefor may be filed with the Minister of the Department with which the contract has been made and payments of such claim may be made by the latter.

All workmen employed in the execution of the contract shall be residents of Canada,

unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contracts for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially directed by the Fair Wages Orders in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of certain classes of supplies listed in the Fair Wages Orders in Council it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any disputes which may arise.

The Department of Labour is furnished from month to month with information regarding the contracts awarded by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed. During the past month, statements were received in the Department of Labour showing that the following contracts, containing fair wages conditions, have been recently executed by the Government of Canada:

#### DEPARTMENT OF NATIONAL DEFENCE

##### *Contracts in Group "A" (Construction, Remodelling, etc.)*

Construction of Married Quarters at the Permanent Force Barracks, Calgary, Alberta. Name of contractors, R. H. Peach & Co., Ltd., Calgary, Alta. Date of contract, January 18, 1935. Amount of contract, \$35,169.00. A fair wage schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages and less than	Hours of labour not more than
	per hour	per day
Asbestos insulation workers.....	\$0 80	8
Blacksmiths.....	0 70	8
Fireman—stationary.....	0 50	8
Machinists.....	0 70	8
Structural steel workers (ornamental).....	0 75	8
Steam shovel engineers.....	1 00	8
Steam shovel cramenen.....	0 90	8
Steam shovel fireman.....	0 50	8
Operators:—		
Hoist—1 drum.....	0 65	8
Hoist—2 drum.....	0 80	8
Cement mixer—gas or electric.....	0 50	8
Cement mixer—steam.....	0 80	8
Compressor.....	0 60	8
Bucket loader.....	0 60	8
Excavator, bear cat and gasoline shovels.....	0 75	8
Shinglers.....	0 75	8
Cement finishers.....	0 60	8

Labourers.....	0 45	8
Motor truck driver.....	0 45	8
Teamster, team and wagon.....	0 75	8
Teamster.....	0 45	8
Painters and glaziers.....	0 75	8

N.B.—Where, by agreement or current practice, the working hours of any class of workers are less than 48 per week, such lesser hours shall not be exceeded on this work.

Construction of a Mess Building at the Permanent Force Barracks, Calgary Alberta. Name of contractors, The Forster Construction Co., Ltd., Calgary, Alta. Date of contract, January 24, 1935. Amount of contract, \$147,250.00. The above-mentioned fair wages schedule was also inserted in this contract.

##### *Contracts in Group "B" (Manufacture of Supplies, etc.)*

The following is a statement of contracts awarded by the Department of National Defence during the month of January, 1935, for various classes of manufactured goods, under the "B" Conditions as they existed from 1922 until the adoption on December 31st of the new Order in Council above referred to. Tenders had been taken in these cases before the close of the calendar year, although the contracts were not concluded until January.

(The former "B" Conditions have been published from month to month in the LABOUR GAZETTE.)

Goods contracted for	Contractor
Gum rubber boots.....	Canadian Goodrich Co., Kitchener, Ont.
Sweater jackets.....	Dominion Woollens & Worsted, Ltd., Hespeler, Ont.
Pillow slips.....	Dominion Textile Co., Ltd., Montreal, P.Q.
Gum rubber boots.....	Gutta Percha & Rubber Co., Ottawa, Ont.
Drab serge jackets.....	Workman Uniform Co., Montreal, P.Q.
Drab whipcord.....	Paton Mfg. Co., Montreal, P.Q.
Drab cloth.....	Paton Mfg. Co., Montreal, P.Q.
Waterproof cloth.....	Canadian Industries Ltd., New Toronto, Ont.
Cartridges.....	Canadian Industries Ltd., Montreal, P.Q.
Cloth.....	Dominion Woollens & Worsted, Ltd., Toronto, Ont.
Cloth.....	Renfrew Textiles Ltd., Renfrew, Ont.
Cloth.....	Oxford Woollen Mills Ltd., Oxford, N.S.
Drab serge jackets.....	Workman Uniform Co., Montreal, P.Q.
Ankle boots.....	A. E. Wry-Standard Ltd., Amherst, N.S.
Ankle boots.....	Tetrault Shoe Ltd., Montreal, P.Q.
Ankle boots.....	Eugène Fournier, Plessisville, P.Q.
Ankle boots.....	Williams Shoe Ltd., Brampton, Ont.
Ankle boots.....	Acton Shoe Co., Acton Vale, P.Q.
Mackinaw coats.....	Grant-Holden-Graham Ltd., Ottawa, Ont.
Blue cloth.....	Paton Mfg. Co., Montreal, P.Q.
Blue cloth.....	The Horn Bros. Woollen Co., Lindsay, Ont.
Gum rubber boots.....	Miner Rubber Co., Ltd., Granby, P.Q.
Knives and spoons.....	McGlashen Clark Co., Ltd., Niagara Falls, Ont.

Horse rugs.....	Hugh Carson Co., Ltd., Ottawa, Ont.
Metal laths, etc.....	Dominion Reinforcing Steel Co., Ottawa, Ont.
Drab frieze.....	Horn Bros. Woollen Co., Lindsay, Ont.
Gum rubber boots.....	Woodstock Rubber Co., Woodstock, Ont.
Gum rubber boots.....	Northern Rubber Co., Ltd., Guelph, Ont.

The following contracts have been awarded under the revised "B" Labour Conditions of December 31st, set out above:—

Goods Contracted for	Contractor
Drill jackets and trousers.....	Grant-Holden-Graham Ltd., Ottawa, Ont.
Blue serge.....	Dominion Woollens & Worsted, Ltd., Toronto, Ont.
Canvas shoes.....	Great West Felt Co., Elmira, Ont.
Service trousers.....	Houde, Larocche & Cie, St. Croix, P.Q.
Cloth trousers.....	Houde, Larocche & Cie, St. Croix, P.Q.

## DEPARTMENT OF PUBLIC WORKS

### Contracts in Group "A" (Construction, remodelling, etc.)

Construction of a public building at Montreal, P.Q. Name of contractors, A. Janin Co., Ltd., Montreal, P.Q. Date of contract, December 20, 1934. Amount of contract, \$1,289,855.00, plus \$5,670.00 for installation of Durham Differential System, and unit prices for additional work. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Asbestos insulation workers.....	\$0 65	8
Asbestos insulation helpers.....	0 45	8
Blacksmiths.....	0 60	8
Boilermakers.....	0 65	8
Brick and hollow tile layers and masons.....	0 70	8
Carpenters and joiners.....	0 60	8
Cement finishers.....	0 50	8
Compressor operators.....	0 50	8
Concrete mixer operators (gas).....	0 45	8
Concrete mixer operators (steam).....	0 50	8
Derrick and hoist engineers (other than on steel erection).....	0 55	5
Drill runners.....	0 45	8
Electricians.....	0 65	8
Elevator constructors.....	0 85	8
Elevator constructors' helpers.....	0 60	8
Fireman—stationary.....	0 45	8
Hollow metal workers (erectors).....	0 60	8
Kalamein iron workers (erectors).....	0 40	8
Labourers.....	0 40	8
Lathers, metal.....	0 65	8
Linoleum, layers, waxers, polishers.....	0 60	8
Machinists.....	0 65	8
Marble setters.....	0 70	8
Mastic floor layers:		
Kettlemen.....	0 45	8
Finishers, rubbers, spreaders.....	0 60	8
Motor truck drivers.....	0 40	8
Ornamental iron and bronze erectors.....	0 60	8
Painters and glaziers.....	0 60	8
Plasterers.....	0 67	8
Plumbers and steamfitters.....	0 65	8
Powdermen.....	0 45	8
Riggers.....	0 50	8
Roofers: slate and tile.....	0 60	8
Roofers: felt and gravel.....	0 45	8
Roofers: composite.....	0 45	8
Sheet metal workers.....	0 60	8
Steam shovel engineers.....	0 85	8
Steam shovel cranemen.....	0 65	8
Steam shovel fireman.....	0 50	8
Stonecutters:		
Granite.....	0 70	8
Sandstone and limestone.....	0 65	8

N.B.—Where, by agreement or current practice, the working hours of any class of workers are less than 48 per week, such lesser hours shall not be exceeded on this work.

## POST OFFICE DEPARTMENT

Following is a statement of payments made in January, 1935, for supplies ordered by the Post Office Department under contracts which were subject to regulations for the suppression of the sweating system, the securing of payment to the workers of fair wages, and the performance of the work under proper sanitary conditions:

Nature of Orders	Amount
	\$ cts.
<i>Making Metal Dating Stamps and Type, Brass Crown Seals, Cancellers, etc.—</i> Pritchard-Andrews Co. of Ottawa, Ltd., Ottawa, Ont.....	588 34
<i>Making and Repairing Rubber Stamps, Daters, etc.—</i> Pritchard-Andrews Co. of Ottawa, Ltd., Ottawa, Ont.....	455 86
<i>Making and Supplying Letter Carriers' Uniforms—</i> Workmen Uniform Co., Ltd., Montreal, P.Q.....	37 80
Tower Canadian Ltd., Toronto, Ont.....	76 83
Tayside Textiles Ltd., Perth, Ont.....	12,182 21
P. A. Alain, Quebec, P.Q.....	426 14
Maritime Cap Co., Moncton, N.B.....	396 36
<i>Mail Bag Fittings—</i> F. W. Carling, Ottawa, Ont.....	5,565 00
Chas. A. Duff, Montreal, P.Q.....	2,173 00
Capital Brass Ltd., Ottawa, Ont.....	935 59
<i>Stamping Machines, etc.—</i> Machine Works Ltd., Montreal, P.Q.....	2,268 19
<i>Scales—</i> Pritchard-Andrews Co., Ltd., Ottawa, Ont.....	32 45

Regulations relating to bake shops, under the Public Health Act of Alberta, were gazetted on December 5. They lay down rules for the sanitary construction and operation of bake shops, control of persons handling of food, storage and shipping of bread, etc., and for the inspection of bakeshop premises.

## Montreal Tramways Mutual Benefit Association

Members of the Montreal Tramways Mutual Benefit Association have recently voted in favour of certain amendments to the sick benefit and pension plan instituted by the company and approved by the Montreal city council early in 1926 (LABOUR GAZETTE, March, 1926, page 219). The amended plan, as suggested by the company and accepted on a vote of the employees, provides for a reduction in the rate of pension from \$2 per day to \$50 per month, the new rate to be applicable to both present and future pensioners. It is also agreed that sickness and disability benefits of \$10 per week are to be reduced from a total of 26 weeks to a total of 13 weeks.

In order to provide the additional reserve to carry out this plan the following scale of payment by employees is put into effect: up to and including 39 years, \$3.00 per month; 40 to 49 years inclusive, \$3.50 per month; 50 years and over, \$4.00 per month.

This scale indicates that there is no increase in payments from younger members of the association, the additional cost being paid by those 40 years of age and over.

The company on its part agrees to increase its annual contribution, \$31,213.50, commencing January 1, 1935, and continuing until April 30, 1938, when the matter will be further reviewed.

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In each agreement, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Manufacturing: Textiles and Clothing

TORONTO, ONTARIO.—CERTAIN DRESS MANUFACTURERS AND THE INDUSTRIAL UNION OF NEEDLE TRADES WORKERS OF CANADA, AND THE TORONTO DRESSMAKERS JOINT COUNCIL OF CUTTERS, PRESSERS, OPERATORS AND FINISHERS' LOCALS.

Agreement to be in effect from January, 1935, to January 20, 1936, and thereafter from year to year until notice. This agreement was made following the strike reported on page 103 of this issue and renews the agreement in effect last year which was summarized in the LABOUR GAZETTE, February, 1934, page 193. The wage rate for finishers is, however, increased from \$12.50 to \$13.50 per week.

### Transportation and Public Utilities; Water Transportation

HALIFAX, N.S.—CERTAIN STEAMSHIP COMPANIES AND THE INTERNATIONAL LONGSHOREMEN'S ASSOCIATION, LOCAL No. 269.

Agreement to be in effect from December 1, 1934, to November 30, 1935, and thereafter from year to year until notice.

When non-union men are employed on account of shortage of union labour, they shall not be replaced by union men during the remainder of the day on which they are hired.

The regular rate of wages for longshoremen is 68 cents per hour for day work and 77 cents for night work, which is an increase of 5 cents per hour over the rates in effect during the previous two years. An extra 10 cents per hour to be paid for full cargoes of cement, gold concentrates, for handling bulk grain, for full cargoes of slag or fertilizer, or when a ship has more than 100 tons in any hold and for work in refrigerating plant if temperature is 26° Fahrenheit or lower. For work between 6 p.m. and midnight Saturday, time and one-half. For work on Sundays and five holidays and for all work during meal hours and until released, and for work on ships with cargoes on fire, double time to be paid. For work on ships with cargoes on fire on Sundays or holidays, \$2.04 per hour for day work and \$2.31 for night work.

Payment for waiting time: from 7 a.m. to midnight, full rate for first hour and half rate

for succeeding hours until midnight; after midnight, full rate to be paid. If ordered out for or after 9 p.m., payment for waiting time to commence from 9 p.m., except if ordered out for or after 1 a.m. to handle mails, baggage or express goods, when waiting time to be paid at full rates from 1 a.m.

Provision is made for the number of men to be employed in the holds. No men to remain in the holds of ships while grain is running.

Any dispute is to be referred for settlement to a joint committee whose decision will be final.

### Service: Recreational

KITCHENER, ONTARIO.—CERTAIN THEATRES AND THE INTERNATIONAL ALLIANCE OF THEATRICAL STAGE EMPLOYEES AND MOVING PICTURE MACHINE OPERATORS, LOCAL No. 357.

Agreement to be in effect from October 8, 1934, to August 31, 1935.

Only union members to be employed.

Overtime to be paid *pro rata*.

Wages for projectionists: \$37.50 per week except where three projectionists employed, when third projectionist may be paid \$32.50. Extra shows, \$3.50 per man per show. Advertising reels run outside of regular running hours, \$1.00 per reel; all work performed other than projection, also all overtime: \$1.00 per hour.

### Collective Agreements in France

At a plenary session on November 30, 1934, the French National Economic Council discussed the problem of collective agreements, which has been the subject of a comprehensive inquiry during the past year. The standing committee on collective agreements submitted a report, the conclusions of which may be summarized as follows:—

The spread of collective agreements depends on the fulfilment of a number of conditions; employers' and workers' organizations must be developed, and a sense of collective ethics must be acquired, the chief element in which is full realization of the binding force of every freely-concluded contract and the responsibility incurred by the parties. The existing organizations should forthwith make a vigorous effort to establish close relations, co-ordinate their work and draft agreements, in every branch of production in which there is any chance of success. The Council is prepared, at a later date, to examine the results obtained, so as to judge whether the experiment should be encouraged and developed, or whether there is need for correction, restatement or legislative action.

After discussion, the conclusions as a whole were adopted with only two dissentient votes (due to disagreement with the reference to legislative action).

## PRICES, RETAIL AND WHOLESALE, IN CANADA, JANUARY, 1933

### Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was again slight, the cost per week of the family budget in terms of retail prices showing a small decline, while the Dominion Bureau of Statistics index number of wholesale prices advanced somewhat.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was \$7.51 at the beginning of January as compared with \$7.54 for December, 1934; \$7.50 for January, 1934; \$11.88 for January, 1930; \$11.63 for January, 1926; \$14.48 for January, 1921; \$16.92 for June, 1920 (the post war peak); and \$7.73 for January, 1914. The most important change was a seasonal decline in the price of eggs, while the prices of salt pork, bacon, lard, evaporated apples and potatoes were also lower. The prices of beef, veal, mutton, milk and butter were slightly higher. Including the cost of fuel and rent with that of foods the total budget averaged \$15.99 at the beginning of January as compared with \$16.02 for December, 1934; \$15.95 for January, 1934; \$22.17 for January, 1930; \$21.96 for January, 1926; \$21.52 for January, 1922; \$26.92 for July, 1920 (the post war peak); and \$14.49 for January, 1914. Fuel was slightly higher owing mainly to increases in the prices of anthracite coal. No changes were reported in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was slightly higher at 71.5 for January as compared with 71.2 for December, 1934. Comparative figures for certain previous dates are 70.6 for January, 1934; 63.5 for February, 1933 (the low point in recent years); 95.3 for January, 1930; 97.1 for January, 1922; 164.3 for May, 1920 (the post war peak); and 64.9 for January, 1914.

In the grouping according to chief component materials all of the main groups were slightly higher except the Fibres, Textiles and Textile Products group which was unchanged. The Animals and their Products group showed the largest advance. In the grouping according to purpose both consumers' goods and producers' goods were slightly higher, the increase in the former being due to higher prices for certain foods, chiefly fish, fruits, meats and butter and for certain items of household equipment. The advance in producers' goods was due mainly to higher prices for lumber and for materials for the furs and leather goods industries and for the

meat packing industries. Materials for the milling industries were slightly lower.

### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of January of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located but still fairly central, without modern conveniences.

The figures as to rentals are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amounts due.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which statistics were available when first published in the LABOUR GAZETTE in January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made

(Continued on page 212)

**COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN  
TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA**

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family

price per cord from price quoted. f. Petroleum coke. g. Natural gas used extensively. h. Lignite. i. Including  
tion and conveniences. r. Mining company houses in district \$5-\$10 per month; others, five and six rooms,

(Continued from page 204)

for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

### Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living, based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the food group in the weekly

#### CHANGES IN THE COST OF LIVING IN CANADA FROM 1913 TO 1935\*

\*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18½%; Clothing 18½%; Sundries, 20%.

family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number for rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and costs of the various items from 1913 to 1926, weighted according to the importance of each item in workingmen's family expenditure, and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

### Retail Prices

Beef prices were somewhat higher in most localities, sirloin steak being up in the average from 19.3 cents per pound in December to 20 cents in January, rib roast from 14.7 cents per pound in December to 15.5 cents in January, while shoulder roast was ½ cent per pound higher at 10.8 cents. The price of veal averaged 12.1 cents per pound in January as compared with 11.6 cents the previous month. Prices were higher in Ontario and British Columbia than in other provinces. Mutton was up in the average from 18.9 cents per pound to 19.7 cents in January. Salt pork was fractionally lower at an average price of 18.9 cents per pound in January. Bacon was also down from an average of 32.7 cents per pound in December to 32.3 cents in January.

The price of fresh eggs showed a substantial seasonal fall, averaging 37 cents per dozen in January, as compared with 41.4 cents in December and 40.7 cents in January, 1934, while cooking averaged 29.5 cents per dozen in January as compared with 31 cents in December. Milk was fractionally higher at 10.3 cents per quart. The price of creamery butter rose from 25.1 cents per pound in December to 25.5 cents in January. Increases were more pronounced in Ontario than in other provinces.

Onions were fractionally higher at 3.5 cents per pound. The price of potatoes showed little change being 73 cents per ninety pounds in January as compared with 72 cents in December. Evaporated apples were down from an average of 15.3 cents per pound in December to 14.8 cents in January. The price of granulated sugar was lower in many localities, the Dominion average being 6.4 cents per pound. The price of anthracite

\*Prior to 1926 number of commodities was 236, and commencing in January, 1934, the number is 567.

coal was up in the average from \$15.17 per ton to \$15.21.

Following are the prices reported for Welsh coal, domestic sizes: Halifax, \$16; Windsor, Nova Scotia, \$16.50; Moncton, \$16; Saint John, \$14; Quebec, \$14.50; Three Rivers, \$15; Sherbrooke, \$16.25; St. Hyacinthe, \$15.50; Montreal, \$15.75; Ottawa, \$16.75; Kingston, \$16; Belleville, \$16.50; Peterborough, \$16.50; Oshawa, \$14.75; Toronto, \$15; St. Catharines, \$15.50; Hamilton, \$15; Brantford, \$16.25; Galt, \$16.50; Sudbury, \$17.50; Cobalt, \$19; Timmins, \$19; Port Arthur, \$16; Fort William, \$16; Winnipeg, \$19.50.

### Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices again showed little movement. No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, averaged 79 cents per bushel in January as compared with

79.2 cents in December. The price at the beginning of 1934 was 65 cents per bushel. In coarse grains rye declined from an average price of 58.9 cents per bushel in December to 54.3 cents in January and barley from 54.9 cents per bushel to 50.4 cents in January. The price of flax advanced from \$1.40 per bushel in December to \$1.436 in January. Flour at Montreal was 20 cents per barrel lower at \$5.20, while rolled oats at Toronto declined from \$3.15 per ninety pound bag to \$3.05. The price of raw sugar at Montreal was up from \$1.75 per cwt. to \$1.90, while granulated was unchanged at \$4.90 per cwt. Ceylon rubber at New York advanced from 12.8 cents per pound to 13.1 cents. The price in January, 1934, was 9.3 cents per pound. In livestock choice steers at Toronto were up from \$5.38 per hundred pounds to \$5.54 and at Winnipeg from \$3.80 per hundred pounds to \$4.17. Bacon hogs at Toronto advanced from \$8.12 per hundred pounds to \$8.56. Lambs also were higher the price at Toronto being up from \$7.26 per hundred pounds to \$7.55. Creamery butter at Montreal was 2 cents per

pound higher at 24.6 cents. Stocks in cold storage were stated to be 48 per cent in excess of holdings at the beginning of January, 1934 but about 24 per cent less than at the beginning of December. The price of fresh eggs at Montreal was substantially lower at 31 cents per dozen in January as compared with 38.9 cents the previous month, while at Toronto the price averaged 28.5 cents per dozen in January and 35.3 cents in December. Stocks in cold storage at the beginning of the

month were very much higher than a year ago but about 42 per cent less than at the beginning of December, 1934. Raw silk at New York was up from \$1.63 per pound to \$1.71. In lumber spruce scantling advanced from \$11.75 per thousand board feet to \$15, and hard maple from \$55 per thousand board feet to \$60. Electrolytic copper at Montreal was \$7.48 per hundred pounds as compared with \$7.43 the previous month and \$9.30 in January, 1934.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

**T**HE following notes afford information as to recent changes in prices in Great Britain and certain other countries. The authorities for the wholesale prices index numbers are named in all cases. The latest table showing cost of living and wholesale prices index numbers for various countries appeared in "Prices in Canada and Other Countries, 1934" issued as a supplement to the LABOUR GAZETTE, January, 1935.

### Great Britain

**WHOLESALE PRICES.**—The Board of Trade index number, on the base 1924=100, was 62.9 for December, an increase of 0.2 per cent for the month. Small advances were shown in all groups except "other food," "other metals and minerals" and wool, all of which declined slightly.

The *Statist* index number, on the base 1867-1877=100, was 82.8 at the end of December, an advance of 2.2 per cent for the month. All groups contributed to this advance except vegetable food and "sugar, coffee and tea" which were slightly lower. The two groups showing the greatest increase were animal food amounting to 6.5 per cent and textiles 4.5 per cent.

**COST OF LIVING.**—The Ministry of Labour's index number, on the base July, 1914=100, was 143 at the beginning of January, a decrease of one point for the month due to lower food prices, chiefly seasonal reductions in the prices of eggs.

### Germany

**WHOLESALE PRICES.**—The index number of the Federal Statistical Office, on the base 1913=100, was 101.0 for December, a decrease of 0.2 per cent for the month. In any group, where there were any changes recorded, they were very slight.

**COST OF LIVING.**—The official index number, on the base 1913-1914=100, was 122.2 for December, a decrease of 0.1 per cent for the

month, due to a small decrease in food prices. There were no marked changes in any of the groups for the month.

### Italy

**WHOLESALE PRICES.**—The index number of the Provincial Economic Council of Milan, on the base 1913=100, was 277.24 for November, a slight advance over the October level. An increase in industrial materials was recorded due to higher levels in the textiles, minerals and metals and miscellaneous vegetable products groups. Food on the other hand was lower, showing reductions in both vegetable and animal foods.

**COST OF LIVING.**—The national index number, on the base June 1927=100, was 69.81 for November, a slight increase over the October level and is the third successive month to show an increase. The index number for food only showed an advance also.

### United States

**WHOLESALE PRICES.**—The Bureau of Labour Statistics index number, on the base 1926=100, was 76.9 for December, an advance of 0.5 per cent for the month, of 8.6 per cent over December, 1933, and of 22.8 per cent over December, 1932, although the level is still 17.6 per cent below December, 1929. Compared with the previous month, the index number in December, 1934, showed advances in all of the ten groups except for slight decreases in fuel and lighting materials, metals and metal products and housefurnishing goods.

*Bradstreet's* index number (continued by Dun and Bradstreet, Incorporated), which is the sum total of the prices per pound of 96 commodities of common consumption, was \$9.4925 at January 1, an increase of 2.2 per cent for the month. This is the highest point reached in four years and as compared with the low point of March 1, 1933, it is a rise of nearly 50 per cent.

Dun's index number (continued by Dun and Bradstreet, Incorporated), which is based on the cost *per capita* of a year's supply of commodities, was \$173,075 at January 1, a rise of 1.69 per cent for the month, and is the highest point reached since June 1, 1930. The increase for the month was due to higher food and clothing prices.

**COST OF LIVING.**—The index number of the National Industrial Conference Board, on the base 1923 = 100, was 80.8 for December, showing no change from the November level. Small advances in food, clothing, and fuel and light were offset by declines in housing and sundries.

## FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1934

THE number of fatal industrial accidents (including fatalities from industrial diseases reported with fatal accidents by workmen's compensation boards, etc., as well as fatalities to persons incidental to the pursuit of their occupations) which were recorded in the Department as occurring during the fourth quarter of 1934, was 260, there being 107 in October, 93 in November and 60 in December.

The report for the third quarter of 1934, showing 260 fatalities, was given in the LABOUR GAZETTE, November, 1934, page 1075. In the fourth quarter of 1933, 187 fatal accidents were recorded (LABOUR GAZETTE, February, 1934, page 206). The supplementary list of fatal industrial accidents, not reported in time for inclusion in the reports covering the periods in which they occurred, contains 23 fatalities for the first three quarters of 1934.

In this series of reports it is the custom to record industrial accidents under the dates of their occurrence and fatal industrial diseases under the dates on which they prove fatal.

Reports were received from the Provincial Workmen's Compensation Boards, from the Board of Railway Commissioners of Canada, from certain other official sources and from the correspondents of the LABOUR GAZETTE. Information as to accidents is also secured from newspapers.

Classified by groups of industries, the fatalities occurring during the fourth quarter of 1934 were as follows: agriculture, 39; logging, 36; fishing and trapping, 12; mining, non-ferrous smelting and quarrying, 45; manufacturing, 19; construction, 28; electric light and power, 5; transportation and public utilities, 43; trade, 13; service, 20.

Of the mining accidents, 25 were in "metaliferous mining" and 20 in "coal mining."

Of the accidents in manufacturing, 4 were in "vegetable foods, drink and tobacco," 3 in "textiles and clothing," 1 in "leather, fur and products," 1 in "saw and planing mill products," 1 in "pulp, paper and paper products," 3 in "iron, steel and products," 1 in "non-

ferrous metal products," and 5 in "non-metallic mineral products."

In construction there were 8 fatalities in "buildings and structures," 14 in "highway and bridge," and 6 in "miscellaneous construction."

In transportation and public utilities there were 13 fatalities in "steam railways," 2 in "street and electric railways," 21 in "water transportation," 2 in "air transportation," 4 in "local transportation," and 1 in "storage."

In trade there were 6 fatalities in "wholesale," and 7 in "retail."

Of the fatalities in service, 10 were in "public administration," 4 in "custom and repair," 3 in "personal, domestic and business," and 3 in "professional establishments."

Accidents involving the loss of two or more lives were as follows:—

On November 25, a farmer and his son were drowned when they broke through the ice on a river near Connaught, Ontario.

On October 31, a captain and a cook of a fishing schooner were washed overboard in a storm and drowned in Clayoquot Sound, British Columbia.

While installing an oil burner, a plumber and his assistant were killed in an explosion from lighting a match on October 20, at Winnipeg, Manitoba.

When one train ran through an open switch and collided with another at Dundas, Ontario, on December 25, two porters lost their lives.

When a steamer sank in a storm on Lake Muskoka, Ontario, on October 6, the captain and mate were drowned.

On October 28, the owner of a schooner, the engineer and a seaman, were drowned near Quebec City, Quebec, when their schooner was swamped in a storm. Another captain and a seaman were drowned on the same date near Clarke City, Quebec, when their schooner sank in a storm, and when a third schooner foundered in this storm, off Anticosti Island, Quebec, a seaman was drowned on the same date. On November 13, two longshoremen fell into the harbour and were drowned at

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### If Union suspends Pension Fund Beneficiary Cannot Claim Pension

A railway engineer, a member of the Brotherhood of Locomotive Firemen and Engineers since 1917, brought an action against the officers and administrators of the Brotherhood for the sum of \$450. In August, 1920, the Brotherhood granted the plaintiff a pension certificate on the following conditions: total and permanent disablement rendering him incapable of discharging his functions as a railway employee; satisfactory proof of his condition; and acceptance in advance of the rules then laid down by the Brotherhood or as subsequently amended. The plaintiff accepted the certificate with these conditions. He alleged that he was totally and permanently disabled in 1922, that he then became entitled to \$75 per month, and that he received payment of that sum each month until December, 1931, when the Brotherhood informed him that they could pay him no more. The plaintiff applied for the continuation of his pension, first to the president and then to the directors of the Brotherhood, but his application was refused.

As the Brotherhood was not an incorporated union, the plaintiff brought an action against its administrators under the laws of Canada and those of the Province of Quebec. The Superior Court at Kamouraska rejected the claim for the reasons stated by Hon. Judge Bouffard, as follows:

An employee, such as the plaintiff, who is a member of a labour organization and participates in a pension fund, subject to the condition that the union is entitled to make such changes in the fund as it may see fit, and who has agreed in advance to accept such changes, cannot complain if subsequently, at a regular meeting of the union and by a resolution adopted by a majority of its members, the fund is abolished and a new fund established, the latter containing conditions different from those of the original fund, and being such that the plaintiff cannot comply with them. The plaintiff cannot invoke any acquired right in such a case, and can only object to the suspension of his allowance on the ground that the change infringed law, custom and morality.

The Court found, further, that a non-incorporated union, with headquarters in the United States, even though it had members and local unions in Canada, is none the less a foreign union, subject to the laws of the place of its origin, in this case the laws of the State of Ohio. Moreover, Section 4 of the federal Trade Unions Act (Revised Statutes of Can-

ada, 1927, chapter 202), forbids the prosecution of a trade union when the question at issue concerns the application of the funds of a union to provide benefits to its members, as in the present case.

*Simard versus Couturier and others* (Quebec) 1934 *Rapports Judiciaires de Quebec, Cour Supérieure*, vol. 72, page 574.

### Workman cannot sue for Wages agreed on between Contractor and Owner

Action was brought against a contractor by a workman for wages earned in the course of construction of Glenmore reservoir, near Calgary. The circumstances in the case were set forth by Mr. Justice Clarke, in the Alberta Supreme Court, as follows:

"The plaintiff was paid all the wages which the defendant agreed with him to pay, but the plaintiff claims a sum in excess thereof by reason of the following provision in the contract for the construction of the reservoir between the defendant and the city of Calgary:

'The contractor must pay or cause to be paid to all mechanics, workmen, labourers and team owners employed by him or by any sub-contractor under him the execution of this contract, wages not less than the union or prevailing rate of wages for such work as the said mechanics, workmen, labourers, team owners and drivers may be engaged upon, and as such wages may vary from time to time during the progress of this contract until its completion.'

"The contract provides for the determination of all disputes by certain engineers named in the contract whose decision shall be final. The plaintiff having failed to get satisfaction for his claim from the engineers brought this action.

"In my opinion he cannot succeed, for want of privity between him and the defendant regarding the provision in the main contract which I have referred to. It may be also that his claim is *res judicata* by reason of the proceedings before the engineers. I do not decide that point, it may be evidence would be required before determining it. The recent decision of the Privy Council in *Young v. C.N.R.* (LABOUR GAZETTE, December, 1930, page 1472) appears to be conclusive against the plaintiff. I do not see that the plaintiff's position can be strengthened by making the city a party to the action and for that reason there is nothing to be gained by enlarging the motion for that purpose.

"The action must be dismissed with costs, including the costs of examination for discovery, Rule 27, not to apply."

*Ore versus Bennett and White Construction Company, Limited* (Alberta), 1934, *Western Weekly Reports*, vol. 3, page 744.

### Liability of Employer for Accident where Chauffeur has engaged substitute

Further appeal, to the Supreme Court of Canada, was made by the defendant, the Gillespie Grain Company, in the case noted in the LABOUR GAZETTE, May, 1934, page 489, under the title *Kuproski versus North Star Oil Company, Limited*. In this case a truck driver, employed by the defendant contrary to his orders allowed a third person, an experienced driver, to drive the company's truck while remaining in the seat beside him. Due to the negligence of this third person, a stranger was injured.

The Supreme Court of Canada affirmed the judgment of the Appellate Division of the Alberta Supreme Court, which in turn affirmed the judgment of his Honour Judge Ewing. The Court held that the employee's disobedience was merely improper conduct within the scope of his employment, that the employee was in charge of the truck at all times and retained a duty to keep a proper look-out, and that the employer was liable.

*Gillespie Grain Company versus Kuproski* (Alberta) Supreme Court of Canada, 1935, *Dominion Law Reports*, vol. 1, page 81.

### Applicability of Workmen's Compensation to Relief Worker in Ontario

A resident of London, Ontario, was on relief for some months prior to February 6, 1933. The system in force in the city of London at that time was to issue vouchers to an applicant for relief, after his circumstances had been investigated, in favour of the landlord for the rent, water rates and light and heat accounts. A card would be given to the applicant showing the number of hours he must work for the city, and it was expected that he would do this work before a new voucher would be issued. In accordance with this practice a card had been taken by the resident in question to the city employment office where he was told to report to the foreman of the London Public Utilities Commission. This he did, and he was detailed to assist in cutting trees in a park owned by the city. While so engaged, on February 6, 1933, he suffered injuries from which he subsequently died.

The widow of the deceased brought an action against the city, under the provisions of the Fatal Accidents Act (Revised Statutes of Ontario, 1927, chapter 183), to recover damages for the death of her husband, which she alleged had been caused by the negligence of the city or of its servants. It appeared that the foreman was negligent in having failed to warn the men on the job, some of whom had no previous experience in chopping

trees, as to the dangers of their operations.

Mr. Justice Kirwin, who tried the case without a jury, found on the evidence that the foreman had shown negligence as claimed, and that the deceased had not been in any way negligent. For the city it was contended that the municipal corporation was not liable and that the plaintiff should have sued the Public Utilities Commission. On this point the Court declared that the latter Commission was the statutory agent of the municipality. The judgment as summarized in *Ontario Weekly Notes*, proceeded as follows:—

It was next argued that, so far as the claim of the plaintiff was based upon the provisions of Part II of the Workmen's Compensation Act, the action failed because a municipal corporation is not an "industry", which, by sec 1 (i), includes establishment, undertaking, trade and business. It is pointed out that in sec. 1 (2) it is enacted that the exercise and performance of the powers and duties of a municipal corporation shall, for the purposes of Part I, be deemed the trade or business of the corporation, thus inferring that they should not be deemed the trade or business of the corporation for the purposes of Part II. However, the opening part of sec. 1 (2) is controlled by the latter part, which clearly sets forth the object of the subsection.

Although the Supreme Court of Canada in *Lewis v. Nisbet & Auld Limited*, (1934) S.C.R. 333 (LABOUR GAZETTE, July, 1934, page 719) reversed the decision of the Court of Appeal, the judgment of Middleton, J. A. (LABOUR GAZETTE, July, 1933, page 750) gives a clear and concise account of the Workmen's Compensation Act. As pointed out by him, cases falling under Part I would not exhaust the category of accidents, and that, while under sec. 122 farm labourers and domestic and menial servants were left to the rigour of the common law, many remained which it was intended should be covered by the provisions of Part II of the Act. That part is based on the old Provincial Workmen's Compensation for Injuries Acts, but increased materially the liability of the employer. For instance, a workman is given a right of action where personal injury is caused to him by reason of the negligence 'of any person in the service of his employer acting within the scope of his employment,' so that many questions which arose under R.S.O. 1914, ch. 146, and its predecessors, as to whether there had been negligence on the part of a person 'who has any superintendence, entrusted to him whilst in the exercise of such superintendence,' etc., no longer arise. Counsel for the defendant submits that *Switzer v. City of Ottawa* (1928), 63 O.L.R. 168, is au-

thority for the proposition that a municipal corporation is not within Part II of the Act, but a perusal of that decision shows that what the Court was there concerned with was the case of a volunteer, and that the Workmen's Compensation Board had determined that he was not an employee of the city and therefore not entitled to compensation. The Court decided that while it was unfortunate that he was deprived of compensation because he was not an employee, still he could be in no higher position than an employee; that an employee was deprived of his right of action in the courts and that therefore, the plaintiff's action failed.

In the present case the plaintiff has filed a certificate under sec. 14 of the Act, whereby the Board "finds and declares that this is an action the right to bring which is not taken away by Part I of the said Act."

The next point urged was that Humphreys (the deceased) was not a workman, as defined by sec. 1 (p) of the Act, because, it is said, he is not a person who had entered into or worked under a contract of service written or oral, express or implied. The learned Justice said that in his opinion Humphreys was such a person, and that, when he received the voucher referred to above, and went, in accordance with the directions given to him, to Nateby (the foreman) and commenced the work he had entered into a contract of service. . . .

And, finally, if Humphreys was not a workman under the Act, he was not a trespasser; he had a right to be in the city park, and since while there he received injuries through the negligence of employees of the city, as a result of which he died, his widow is entitled to recover damages against the Corporation under the Fatal Accidents Act.

The question of the amount that should be awarded is one of considerable difficulty. The plaintiff had worked both before and after she was married, when she could find work and when she was able to do it. Humphreys did not have any remunerative employment for any great length of time. Humphreys was 26 years of age at the time of his death and his wife was about the same age. They had been married but a short time, and he had been unable to accumulate any of this world's goods. There is one child, born April 4, 1928, and a fair allowance is \$2,400 of which \$1,000 should be paid to the widow, and the balance paid into court to the credit of the infant, there to remain until the infant attains the age of twenty-one years of age, subject to any further order of the Court in the meantime.

*Humphreys versus the City of London* (Ontario), 1935, *Ontario Weekly Notes*, page 36.

### Compensation for Rupture Sustained in the Course of Employment

A railway signal operator in Saskatchewan sued to recover \$2,500 by way of compensation for alleged personal injury by accident arising out of and within the scope of his employment, the accident being alleged to have occurred on December 25, 1933. The plaintiff was on that date, and had for several years been employed as signal operator at a signal tower on the defendant's line of railway at or near Bienfait, Sask. The operating room in this signal tower contains twelve levers, the right six levers being used in the operation of the defendant's trains, while the left six were used in the operation of the C.P.R. Co.'s trains.

The tower was maintained by the Canadian National Railways (defendant) and it was the duty of an employee of the defendant to operate all the levers therein as the occasion required. It was the duty of the plaintiff to let through all passing trains and his hours were from 7:30 to 4:30 for six days in the week. He was not on duty on Sundays and holidays, but had to be within call on these days and after hours to let through passing trains and he was allowed overtime for this work. He was paid at the basic rate of \$100 per month with a 15 per cent reduction and was allowed 1 hour and 20 minutes for each hour of overtime. For the three years preceding December 25, 1933, he had earned not less than \$1,000 per year.

On Christmas day the plaintiff was, in the course of his duty, operating the levers in the signal tower when he felt a sharp pain in his left side, which continued less sharply throughout the evening and became more intense during the night. The next morning he was too ill to attend to his work and had to be operated on, when it was found that he was suffering from a rupture of the sigmoid colon accompanied by a general peritonitis.

In an action under the provincial Workmen's Compensation Act, His Honour Judge Wylie found that the immediate cause of the rupture was the great pressure imposed on the plaintiff's abdominal organs while he was pulling the lever at the time he first felt the pain, although it was probable that the wall of the colon had been weakened by diverticulosis. His Honour held that the plaintiff had suffered a personal injury by an accident arising out of and in the course of his employment, and was, therefore, entitled to compensation under the Act.

On the question of damages Judge Wylie said:—

"The plaintiff has necessarily incurred certain hospital expenses and doctors' bills, all of which I find to be reasonable for the services rendered and the material supplied, and in arriving at actual damages suffered the following items should be allowed:

Doctors' fees.. . . .	\$ 200.00
Drugs, dressings, etc.. . . .	47.08
Hospital accounts (Bienfait & Winnipeg).. . . .	214.05
Loss of wages for 18½ months..	1,850.00
A minimum allowance for pain & suffering.. . . .	300.00
Costs of the necessary subsequent operation in two stages.. . . .	600.00
	<hr/>
	\$3,211.13

The plaintiff, however, can only be compensated within the limits fixed by sec. 15 of the Workmen's Compensation Act which limits the amount to \$2,500. There will therefore be judgment for the plaintiff for \$2,500 and costs.

*Rees versus Canadian National Railways* (Saskatchewan) 1935, *Western Weekly Reports*, vol. 1, page 7.

#### Rights of Survivor in Trade Union Benefit Scheme

A member of the Syndicated Longshoremen of the Port of Montreal died intestate on December 12, 1930, being survived by his father and wife (the plaintiff in this case). The widow claimed the entire amount of the death benefits which the Association had contracted to pay to the heirs or representatives of any of its members who might die while in good standing, in the present case \$200. The Court of first instance took the father's rights into account and divided the amount, allowing the

plaintiff \$100. The deceased had neglected to pay his contribution to the fund for October, 1930, and had therefor been suspended, losing all his rights to benefit, and it was only by subsequently paying the contribution for October, which he did in November, that he had been re-instated and re-established his claim.

At his death, which occurred in December, 1930, less than 90 days had elapsed since his re-instatement. The Union assumed that any right in the matter had been forfeited by the deceased and his heirs, as one of the rules of the Organization provides that any member in arrear with his contributions for 30 days was automatically suspended from membership. Another rule provides for the re-instatement of a member on payment of his arrears up to arrears for six months, with the further provision, however, that the member in such a case shall enjoy no benefits during the period of his suspension, and that in any event he shall have no right to any benefit for a period of 90 days from the date of his re-instatement.

The plaintiff, however, argued that in the present case there was no question of benefit being paid to a re-instated member; it was rather a question as to what the union had undertaken to pay the survivors, the agreement containing a scale of benefits to be paid to the survivors of members in good standing. The Court found that the essential point in the case was that the deceased was in good standing at the time of his death. The provision in regard to the suspension of benefit for 90 days after the re-instatement of a member does not apply to the claims of a survivor where the member dies before that period has expired. *Guilbault versus Association of Syndicated Longshoremen of the Port of Montreal* (Quebec) 1935 *Rapport Judiciaires de Québec* (*Cour du Banc du Roi*) page 1.

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

A MODERATE increase was noted in industrial employment in Canada at the beginning of February, according to returns received by the Dominion Bureau of Statistics from 8,992 firms, each with a minimum of fifteen employees. The staffs of these firms on February 1 aggregated 885,556 persons, as compared with 883,525 on January 1. This increase of rather more than 2,000 workers was smaller than the average gain noted on February 1 in preceding years of the record, which commences with 1921. It is significant, however, that the seasonal recession on January 1 had been decidedly smaller than usual for that date, and a revival of less-than-normal proportions on February 1, might therefore be regarded as not out of the ordinary. The index, based on the 1926 average as 100, rose from 94.4 on January 1 to 94.6 at the beginning of February, as compared with 91.4 at the same date in 1934. On February 1 in the last thirteen years it was as follows: 1933, 77.0; 1932, 89.7; 1931, 100.7; 1930, 111.6; 1929, 110.5; 1928, 102.0; 1927, 96.6; 1926, 91.8; 1925, 87.1; 1924, 91.7; 1923, 90.6; 1922, 79.9; 1921, 91.2. The returns are representative of employment in all industries except agriculture, fishing, hunting and highly specialized business.

At the beginning of February, 1935, reports were forwarded to the Department of Labour by 1,783 local trade unions throughout Canada, with an aggregate of 161,713 members. Of these, 29,284 or a percentage of 18.1 were without employment as compared with percentages of 18.0 at the beginning of January, 1935, and 21.2 at the beginning of February, 1934.

Reports received by the Department of Labour from offices of the Employment Service of Canada showed declines from December, 1934, and from January a year ago in the volume of business recorded as shown by the average daily placements effected, the heaviest losses under the former comparison taking place in farming and construction and maintenance and under the latter in construction

and maintenance and logging. Vacancies in January, 1935, numbered 29,467, applications 54,190 and placements in regular and casual employment 28,131.

In retail prices the cost per week of a family budget of staple foods, fuel and lighting, and rent was slightly higher at \$16.06 at the beginning of February as compared with \$15.99 for January. The increase was due to the higher cost of foods, chiefly meats and butter, which more than offset a seasonal fall in the cost of eggs. Some comparative figures for the cost of the budget are \$16.09 for February, 1934; \$22.12 for February, 1930; \$21.87 for February, 1926; \$21.07 for February, 1922; \$26.92 for July, 1920 (the post war peak); and \$14.54 for February, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, continued to advance, being up from 71.5 to 72.0. Figures for earlier dates are 72.1 in February, 1934; 93.9 in February, 1930; 102.2 in February, 1926; 98.3 in February, 1922; 164.3 in May, 1920 (the post war peak); and 64.8 in February, 1914.

The most recent statistics available reflecting industrial conditions are given in the table on page 222. The index of the physical volume of business was at the same level in January, 1935, as in November, 1934, having recovered from the decline experienced in December. Comparing January of the present year with December, 1934, of the principal factors included in the index those used as indicators of mineral production, construction, electric power output, car loadings and exports were higher, while manufacturing, trade employment and imports were lower. The business index was 11 per cent higher at the beginning of 1935 than at the beginning of 1934 and 42 per cent higher than at the beginning of 1933. In these latter comparisons all of the principal factors showed substantial increases. Information available for February shows increases over January in wholesale prices, car loadings, employment, Canadian National Railroad earnings and in contracts awarded.

(3) Figures for end of previous month.

(4) Figures for four weeks ending March 2, 1935 and corresponding previous periods.

(5) Sugar production given in periods of four weeks ending February 23, January 26, 1935, and December 31, 1934; February 24, January 27, 1934, and December 30, 1933.

(7) MacLean's Building Review.

(8) Operating expenses for 1934 include pensions.

During February there were seven strikes and lockouts, involving 1,545 workers with a time loss of 16,116 man working days, as compared with 9 disputes during January involving 4,792 workers with a time loss of 21,429 working days. In February, 1934, there were 24 disputes on record involving 4,910 workers with a time loss of 30,169 working days. No disputes were added to the record during February, all being carried over from January. Those causing considerable time loss involved coal miners at Corbin, B.C., and at Springhill, N.S. The latter was terminated during February. The higher figures for January were due chiefly to strikes of coal miners at Springhill, N.S., involving 1,100 workers, with a resultant time loss of 7,700 days; dress-makers, Toronto, Ont., 1,450 workers, 5,000 days; also cloak and suit makers, Toronto, Ont., 1,800 workers, time loss 5,000 days. The principal dispute in February, 1934, involved 1,300 loggers on Vancouver Island, B.C., with a time loss of 20,000 days. Of the seven disputes in February, three were recorded as terminated, one resulting in favour of the employer and two in favour of the workers involved. The disputes unterminated at the end of the month numbered four and involved 277 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected, but which had not been called off or definitely declared terminated by the unions involved.

#### **Resolution Providing for Economic Council.**

Rt. Hon. Sir George Perley, acting for the Prime Minister, Rt. Hon. R. B. Bennett, introduced a resolution in the House of Commons on March 8 for the establishment of a National Economic Council. The text of the resolution is as follows:

"That it is expedient to bring in a measure to establish the Economic Council of Canada and to provide for the employment of such officers and employees, and for the payment of such expenses as may be necessary to carry into effect the proposed legislation."

#### **Progress of Federal Program of Social Legislation.**

The Dominion Government's program of social legislation was further advanced in Parliament during the past month. At this writing the Employment and Social Insurance Act (LABOUR GAZETTE, February, 1935, page 135) has received its three readings in the House of Commons and now goes to the Senate.

As detailed on page 233, Bills to incorporate into legislation the Eight-Hour Day and Weekly Rest Conventions of the In-

ternational Labour Organization were introduced by the Prime Minister in the House of Commons. The Eight-Hour Day Bill with certain important amendments (which will be outlined in the next issue) has received its second reading, while the Weekly Rest measure has passed through all its stages in the House of Commons.

By a vote of 45 to 3 a motion for approval of the Eight-Hour Day Convention was adopted by the Senate, which had previously approved four other Conventions—those concerning Seamen's Articles of Agreement; Marking of Weight on Heavy Packages transported by Vessels; Protection of Workers Employed in Loading and Unloading Ships; and the Weekly Rest in Industrial Undertakings.

#### **Special Parliamentary Committee on Housing Appointed.**

A special committee was appointed by the House of Commons, on February 18, on the motion of the Prime Minister, to consider and report upon the inauguration of a national policy of house building. The motion was as follows: "That Messrs. Morand, Bourgeois, Church, Dorion, Elliott, Ganong, Gray, Sullivan, Hanbury, Heaps, Howard, Howden, McIntosh, Peck, Plunkett, Rinfret, Stanley and White (London), be appointed a special committee of this House to consider and report upon the inauguration of a national policy of house building to include the construction, reconstruction and repair of urban and rural dwelling houses in order to provide employment throughout Canada, and also to provide such dwelling houses as may be necessary, upon such terms and conditions as may be best adapted to the needs and requirements of the people, having regard to the cost of such a policy and the burden to be imposed upon the treasury of Canada; and to recommend the manner in which such a work should be proceeded with; and to hear evidence and to send for persons and papers in regard to the matters above set out."

#### **Transfer of Old Age Pensions Administration.**

By Order in Council of March 1 the administration of the Old Age Pensions Act (Chapter 156 of the Revised Statutes of Canada) has been transferred from the Department of Labour to the Department of Finance. It was represented in a joint report by the two Ministers concerned that:

"In order to avoid duplication of Departmental activities and secure centralization of responsibility, and as an important part of the administrative function of the Dominion Government in carrying out the

provisions of the Act involves accounting control and supervision, it is desirable in the opinion of the Ministers that such administration of the provisions of the Act should be under the control of the Minister of Finance."

The transfer becomes effective on April 1, 1935.

#### **Legislatures Announce Social Measures.**

Forecasts of social legislation were conveyed in Speeches from the Throne at the opening sessions of several provincial Legislatures.

In Ontario, the provisions of the Mothers' Allowance Act will be extended to include destitute widows with one child. A measure will also be enacted to give binding effect to voluntary collective agreements between employers and employees in order "to overcome many of the abuses which have existed and to improve conditions in industry."

Public health proposals, resulting from a comprehensive study, will be submitted to all interests concerned in British Columbia. It was also announced that there would be amendments to last year's enactments respecting hours of work and wages.

In Alberta, in addition to the federal-provincial-municipal unemployment program, assistance is to be given needy settlers in new homestead areas, bringing under cultivation a limited amount of land.

The position of Manitoba in regard to constitutional jurisdiction in legislation was definitely stated in the Throne Speech. It was pointed out therein that at the Dominion-Provincial conference in January, 1933, the representatives of Manitoba intimated the willingness of the province "to surrender such jurisdiction as it possesses" in the furtherance of national social measures. It was also intimated that if enabling legislation was required, it would be submitted during the session.

The New Brunswick program indicated amendments to the Forest Operations Commission Act, which was adopted at the last session and which provided minimum wage rates in logging and lumbering. A housing Act, designed to improve conditions and give employment, was also announced.

Among the recommendations in the field of social legislation for Nova Scotia, were the establishment of an economic council, and also the eight-hour day in certain industries.

#### **Trade Union Law in Canada.**

Under the title "Trade Union Law in Canada" the Dominion Department of Labour has recently published a bulletin which reviews the legal status of trade unions under

the common law, and federal and provincial legislation. Quotations are made from numerous legal decisions in Great Britain and Canada involving trade unions and their activities. An outline is also given of the history of this legislation, making the entire presentation one which is not only authoritative but of particular interest at the present time. Tracing the origin of trade union law in Canada, it is explained that, although with other laws it has a common derivation from England, yet Canadian Trade union law differs considerably from the existing law in Great Britain.

In Canada a strike of printers in Toronto (March 25, 1872) precipitated the movement for protective legislation. The printers, striking for reduced working hours, had been imprisoned on charges of criminal conspiracy. Public opinion forced remedial action. Accordingly, in June, 1872, the Trade Unions Act was enacted with the immediate objective of freeing trade unionists from liability under the common law on conspiracy in restraint of trade. The Trade Unions Act, however, differed from its English prototype in that the Canadian Act was declared to apply only to unions registered under the enactment. At the same time, the Criminal Law Amendment Act, also copied from an English Statute of the previous year, was passed to prevent intimidation in connection with industrial disputes. This statute forms the basis of the present law on picketing.

The bulletin proceeds to detail the changes in these two Canadian statutes pertaining to picketing, conspiracy, etc.

The complexities of legislation, due to the jurisdictional provisions of the Canadian constitution, are summarized as follows:

"Statutes affecting trade unions may be either Dominion or provincial according to their subject matter. The Trade Unions Act was passed a few years after Confederation when trade unions were few and isolated and the only phase of the law with which Parliament was then concerned was the criminal law on conspiracy and intimidation. But the Trade Unions Act as copied from that of Britain confers the right to hold property and to sue and be sued in regard to it, a civil right. Criminal law is a matter for the Dominion Parliament but law respecting property and civil rights is a matter for the provincial legislatures under the British North America Act, and the constitutional validity of the Trade Unions Act has been questioned. In fact, provincial statutes concerning trade unions were enacted in British Columbia (Trade Unions Act of British Columbia) and Quebec (Professional Syndicates Act) in 1902 and 1924 respectively."

An analysis is made of the position of trade unions under the law of the Dominion, and as affected by legislation in British Columbia and Quebec with particular reference to the liability of trade unions for the acts of their members and the rights of trade unions to sue.

There is also a section on collective agreements between employers and employed showing their position in English law and under the Collective Labour Agreements Extension Act of Quebec. The latter statute is attracting a good deal of interest just now as a means of protecting the employers and workpeople who enter into agreements as to wages and hours of labour against the employer who would pay inadequate wages for long hours.

The bulletin has been prepared by Miss Margaret Mackintosh, of the Department of Labour.

#### **Restoration of Relief "Cuts" in Great Britain.**

Following public protest against the regulations issued by the new Unemployment Assistance Board in Great Britain, the House of Commons recently passed the Unemployment Assistance (Temporary Provisions) Bill which is summarized elsewhere in this issue. The main purpose of this recent enactment is to restore all the reductions made through the operation of the regulations. It also postpones *sine die* the date (March 1) upon which the Board was to take over the poor law functions of the local authorities for the relief of the able bodied unemployed.

#### **Consolidation of Unemployment Insurance Acts in Great Britain.**

A Bill to consolidate the Unemployment Insurance Acts, 1920 to 1934, and certain other enactments relating to those Acts, received its second reading recently in the House of Lords.

The Bill is in seven Parts (containing 116 clauses) and seven schedules. Part I deals with the classes of persons to be insured; Part II with the contributions to be paid, and Part III with benefit; Part IV deals with matters of administration and finance; Part V with arrangements with associations (whereby, under certain conditions, benefit can be paid to members of trade unions or other associations through those associations), and with special and supplementary schemes; Part VI with matters relating to training, education and the powers of Education Authorities; and Part VII with a number of miscellaneous and general points.

It should be particularly noted, states the *Ministry of Labour Gazette*, (i) that the Bill is a consolidating measure pure and simple; it does not amend or alter the existing Unemployment Insurance Acts in any respect; and (ii) that it does not incorporate Part II of the Unemployment Act of last year (i.e., the Unemployment Assistance Act).

#### **Unemployment Insurance for South Africa.**

One of the major items of legislation which it is expected will be adopted by the Parliament of the Union of South Africa during its present session is the Unemployment Benefit Bill, which was held over from last session. The industries to which the scheme is intended to apply are building, mechanical, electrical and motor engineering, furniture manufacture, gold mining on the Witwatersrand, leather and footwear manufacture, and printing.

#### **Action of Governing Body of I.L.O. respecting Canadian Representation.**

Elsewhere in this issue (page 248) is an article dealing with the resolutions and the discussion pertaining to the Canadian Government Seat on the Governing Body of the International Labour Office at Geneva.

The article also contains the statement on the subject made in the House of Commons by the Minister of Labour, Hon. W. A. Gordon. The Minister, after outlining the criteria on which membership in the Governing Body is based, stated that "the Government are considering the advisability of requesting that steps be taken to clarify and place on a definite and unmistakable basis the procedure to be followed in determining at what periods and in what manner the list of eight states should be revised in future."

#### **Proposed Thirty-hour week in United States.**

Both opposition to and support of the thirty-hour week Bill in the United States have developed before public hearings on the proposed legislation. In opposition to the measure are representatives of the National Association of Manufacturers, the American Publishers Conference and others, while its adoption is advocated by the American Federation of Labor.

The object of the Bill as introduced in the House of Representatives and the Senate is "to provide for a thirty-hour week to relieve unemployment and for other purposes."

It is then declared "that a national emergency resulting from the unemployment of millions of willing workers has imposed upon

State and Federal Governments a burden of unemployment relief and has interfered with the free flow of inter-state commerce to such an extent that action to spread employment uniformly has become essential."

During this "period of national emergency" it is stipulated that "no employee shall be required or permitted by an employer subject to this Act to work more than thirty hours in one week, five days in one week, or six hours in one day by any single employer, or through employment by more than one employer" except under "the circumstances and in the manner provided."

Modifications are granted to employers who are complying with the codes of fair competition under the National Industrial Recovery Act, and then only when contingent upon the existence of exceptional conditions "which make compliance impossible without reducing the total volume of employment or restricting commerce unfairly."

No modification is granted for more than a ninety-day period, and does not permit a worker to be employed for more than an average of 40 hours per week during the period of modification. Provision is made in all such cases for an adjustment in compensation.

The President is empowered to cope with imported and competitive products (produced under conditions that render ineffective the provisions of the Act) by imposing limitations as to quantity and payment of fees.

The Bill extends to all forms of employment but does not apply to agricultural workers, persons in domestic service or employees subject to the Railroad Labour Act.

#### **Dismissal compensation for railway employees in U.S.A.**

A bill has been recently introduced in the United States House of Representatives providing for dismissal compensation for railroad employees displaced from service. According to the proposed measure, dismissal compensation is not to be paid to employees leaving the service because of discharge for disciplinary reasons, resignation, or permanent recession in traffic, but only as the result of the introduction of labour saving improvements resulting from the adoption of projects involved in consolidation, mergers, and unification of facilities which require either governmental authority or relaxation of restrictions, or are prompted or stimulated by the Government.

The determination of such employees as would be compensated under the scheme rests with a board operating under the National Mediation Board, in event of failure of agree-

ment between employee and employer representatives of the industry. Seniority rules already regulating railroad labour and the division of employees into existing groups, crafts, and classes, are adopted for the determination of dismissed compensation rates.

The scale of dismissal compensation is graduated upon service, provides an age differential, is related to earnings, and is closely co-ordinated with the Railroad Retirement Act as regards definitions of service, age, earnings, etc.

In recommending this enactment the Coordinator of Transportation, in his report on transportation legislation, recognized the financial burden which would be imposed upon the railroads, but expressed the opinion that the economies resulting (from labour saving improvements) would cover the attendant cost.

**Retirement of Mr. J. H. Magee, Associate Editor**

The February issue of the LABOUR GAZETTE marked the last number published under the able editorship of Mr. J. H. Magee, who retired on February 28. Mr. Magee has been identified, editorially, with this official publication of the Department of Labour since October, 1919. For the past eight years he has been its associate editor, being the seventh incumbent in that office since the establishment of the Department.

The Dominion Bureau of Statistics (Department of Trade and Commerce) has recently issued a summary of the Trade of Canada, covering the twelve months ending January 1934 and 1935. The total imports for the twelve months ending January, 1935, were \$84,082,713 as compared with \$70,723,192 for the previous twelve months. The total exports were \$650,137,037 as compared with \$546,839,383 for the previous twelve months.

The Dominion Bureau of Statistics (Department of Trade and Commerce) has recently issued a report on the Hat and Cap Industry in Canada, 1933. The report is based on statements received from 149 establishments whose principal output consisted of hats, caps and millinery. The capital invested amounts to \$5,521,356; salaries and wages for the year under review were \$2,755,766; and the number of employees was 3,350.

According to a recent press dispatch, the Government of the Province of Quebec has rejected the proposed amendments to the Workmen's Compensation Act. The amendments were intended to restore the schedule of indemnities which were in force prior to 1932.

## RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

ON February 28, linemen, troublemen and truck drivers in the employ of the Toronto Transportation Commission withdrew their application for the establishment of a Board of Conciliation and Investigation which had been submitted to the Department of Labour on August 31. The dispute related to the employees' request for a new working agreement embodying increased wage rates, etc., the application stating that the men had been unable to meet the officials of the Com-

mission with reference to their demands. An officer of the Department of Labour interviewed the officers of the Company and Union in Toronto in September and made arrangements for conferences to take place between the interested parties. During these negotiations a number of concessions were granted by the Commission and the employees agreed to leave the matter of wages in abeyance for the present.

### STRIKES AND LOCKOUTS IN CANADA DURING FEBRUARY, 1935

THE following table shows the number of disputes, workers involved and time loss for February, 1935, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Feb. 1935...	7	1,545	16,116
*Jan. 1935...	9	4,792	21,429
Feb. 1934...	24	4,910	30,169

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time is frequently not received until some time after its commencement.

The number of strikes and lockouts recorded during February was less than during January and much less than during February of last year, while the numbers of employees involved and the time loss in man working days were considerably lower. The higher figures for January were due chiefly to strikes of coal miners at Springhill, N.S., and of dressmakers and cloakmakers at Toronto, Ont., while the higher figures for February, 1934, were due to a strike of loggers on Vancouver Island.

Seven disputes, involving 1,545 workers, were carried over from January, including a dispute of leather jacket makers employed by one firm in Hamilton, Ont., not reported in time for inclusion in the table in the February issue of the LABOUR GAZETTE. No disputes are recorded as commencing during February. Of the seven disputes on record, three terminated during the month, one in favour of the employer and two in favour of the workers concerned. At the end of February, therefore, there were four disputes in progress recorded as strikes or lockouts, namely: coal miners, Corbin, B.C., bakery employees, Toronto, Ont., leather jacket makers, Hamilton, Ont., and compositors, Calgary, Alta.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not declared terminated. Information is available as to five such disputes, namely: photo engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., May 4, 1931, one employer; motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; moulders, Peterborough, Ont., February 27, 1934, one employer; shoe factory workers, Preston, Ont., September 13, 1934, one employer; and compositors, London, Ont., March 1, 1934.

Disputes involving men on unemployment relief work, who are not paid wages but receive subsistence for which work is performed or may be required, are not included in the record, no relation of employer and employee being involved.

Employees in one shingle mill at Burnaby, B.C., numbering 110 were prevented from working from February 5 to February 13, by

pickets who demanded that the employer should pay higher wages. It is stated that on shingles for sale in Canada and for shipment to the United States the employer paid different scales which averaged approximately the same as the union scale, and that this was accepted by the employees. The picketing was reported to be sponsored by another union and several clashes with police occurred.

A cessation of work by 15 employees in a clothing factory in Winnipeg on February 26, protesting the dismissal of one worker, has been reported in the press. Particulars were not received in time for inclusion in the statistical table.

A dispute involving coal miners employed by one company at Princeton, B.C., toward the end of February has been reported but particulars have not yet been received.

A dispute involving halibut fishermen in British Columbia on the Pacific coast has been reported in the press. It appears that fishing for the new season has been delayed, pending arrangements as to prices and marketing for the season.

Press reports also give particulars of a dispute involving deckhands on two ships at Vancouver and New Westminster, B.C., on February 26. The workers demanded overtime pay for work in port beyond eight hours per day and refused to handle cargo until this was conceded. Firemen also demanded increases in wages. It has been reported that these demands were conceded after one day.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

COAL MINERS, CORBIN, B.C.—This dispute, which commenced on January 21, 1935, remains unteminated. Following the dismissal of one worker for alleged neglect of duty the employees, most of whom were members of the Mine Workers' Union of Canada, ceased work, withdrawing maintenance men. They demanded reinstatement of the man discharged, the installation of a "man trip" for one of the mines, additional repairs to houses, equal division of work and changes in payment of men taken from their regular work. The western representative of the Depart-

#### STRIKES AND LOCKOUTS IN CANADA DURING FEBRUARY, 1935\*

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
<b>(a) Strikes and Lockouts in Progress prior to February, 1935.</b>			
<b>MINING, ETC.—</b>			
Coal miners, Corbin, B.C.....	220	5,280	Commenced Jan. 21, 1935; against dismissal of worker and for certain changes in conditions; unteminated.
Coal miners, Springhill, N.S....	1,100	8,800	Commenced Jan. 24, 1935; for dismissal of 12 members of a dual union; terminated Feb. 9: in favour of workers.
<b>MANUFACTURING—</b>			
<i>Vegetable Foods—</i>			
Bakery employees, Toronto, Ont.....	14	336	Commenced Jan. 2, 1935; for increased wages; unteminated.
<i>Fur, Leather, etc.—</i>			
Leather jacket makers, Hamilton, Ont.	23	550	Commenced Jan. 24, 1935; for increased wages, reduction of overtime and equal distribution of work; unteminated.
<i>Boots and Shoes—</i>			
Shoe factory workers, Montreal, P.Q.	118	470	Commenced Jan. 24, 1935; for increased wages; terminated Feb. 5, 1935; in favour of employer.
<i>Textiles, Clothing, etc.—</i>			
Women's clothing factory workers (cloaks and suits), Toronto, Ont.	50	200	Commenced Jan. 24, 1935; for renewal of union agreement with provision for reduced hours, abolition of overtime and an unemployment fund; terminated Feb. 6, 1935; in favour of workers.
<i>Printing, etc.—</i>			
Compositors, Calgary, Alta...	20	480	Commenced Jan. 10, 1935; against decrease in wages; unteminated.

#### **(b) Strikes and Lockouts commencing during February, 1935.**

None recorded. See text above.

\*In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which working time was lost to an appreciable extent.

ment reached Corbin on February 7 and, following a conference of the parties, the employers agreed to these demands, stipulating, however, that the miners would refrain from pit head strikes, and deal with any future disputes as provided under the agreement in force until March 31. The miners then made further demands on nearly all points, which were refused. At the end of the month the dispute was unterminated.

**COAL MINERS, SPRINGHILL, N.S.**—As stated in the February issue of the *LABOUR GAZETTE*, this strike, called by the United Mine Workers of America, which had an agreement with the employer, to secure the dismissal of certain miners, members of the Amalgamated Mine Workers of Nova Scotia, was terminated on February 10, as a result of conciliation by the provincial authorities, the miners affected applying for membership in the United Mine Workers of America.

**BAKERY EMPLOYEES, TORONTO, ONT.**—This dispute involving fourteen employees of a bakery firm in Toronto, Ont., against the discharge of a driver, was not terminated until early in March, an agreement having been reached with the union providing for the employment of union members only and also for the reinstatement, at fixed dates, of those on strike.

**LEATHER JACKET FACTORY WORKERS, HAMILTON, ONT.**—Information as to this dispute, commencing on January 24, 1935, was not received in time for inclusion in the record in the February issue of the *LABOUR GAZETTE*. Employees in one establishment ceased work

demanding changes in the wage scale, a reduction in overtime work and a fairer distribution of work. The employer stated that the wage rates were higher than in Toronto and the hours were 44 per week. At the end of February a settlement had not been reported.

**SHOE FACTORY WORKERS, MONTREAL, P.Q.**—This strike of some of the employees in one establishment was called off on February 5, with reinstatement of strikers not yet replaced. The strikers had demanded the payment of the wages provided for in the agreement made applicable to all shoe factories in the province under the Quebec Collective Labour Agreements Extension Act (*LABOUR GAZETTE*, September, 1934, page 825). The employer claimed that these were being paid. The provincial conciliation officer and the Deputy Minister of Labour investigated but the strike was called off before any settlement had been reached. It is reported some wage adjustments were then made.

**WOMEN'S CLOTHING FACTORY WORKERS (CLOAKS AND SUITS), TORONTO, ONT.**—An agreement having been reached with most of the employers involved by the end of January, this strike was terminated apparently in all but one establishment, and by February 5, the fifty employees on strike were replaced.

**COMPOSITORS, CALGARY, ALTA.**—The strike of printing compositors employed on one daily newspaper in Calgary, Alta., owing to a reduction in wages, has not been terminated and the employer is reported to have substantially replaced the strikers.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing down to date that given in the issue of February, in the review of Strikes and Lockouts in Canada and Other Countries, 1934. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates. Statistics given in the annual review and in this monthly article are taken as far as possible directly from the Government publica-

tions of the various countries concerned, while information as to particular disputes is obtained for the most part from newspaper reports.

### Great Britain

The number of disputes beginning in January was 40, and 11 were still in progress from the previous month, making a total of 51 disputes in progress during the month, involving 19,000 workers with a time loss of 102,000 working days in the month. Of the 40 disputes beginning in January, 6 were over demands for advances in wages, 12 over other wage questions, 15 over questions respecting the employment of particular classes or persons, 4 over other questions as to working arrangements, and 3 over questions of trade

union principle. Settlements were reached during the month in 34 disputes, of which 16 were in favour of workers, 10 in favour of employers and 8 resulted in compromises; in 2 other disputes, work was resumed pending negotiations.

The dispute involving 1,630 coal miners near Dalkeith, which began December 19, terminated January 16, when it was agreed to bring up any lower wage rates to the average for the district.

#### **The Netherlands**

Preliminary figures for the year 1934 give the number of disputes as 151, involving 422 establishments and 5,410 workers, with a time loss of 108,300 working days for the year.

#### **Switzerland**

The number of disputes in the year 1934 was 20, involving 163 establishments and 2,763 workers, with a time loss of 33,309 working days for the year.

#### **United States**

The number of disputes beginning in November was 84 and 195 were in progress during the month. The number of workers involved in disputes in progress during the month was 100,712 and the time loss for November 1,310,613 working days.

No report of any settlement of the strike of biscuit factory workers in New York City and Philadelphia, which was mentioned in the February LABOUR GAZETTE has been noted.

## **CANADIAN NATIONAL RAILWAYS EMPLOYEES' BOARD OF ADJUSTMENT No. 2**

### **Summary of Recent Decisions**

**R**EPORTS have been received of seven cases recently settled by the Canadian National Railways Employees' Board of Adjustment No. 2. Outlines of previous cases were given in the LABOUR GAZETTE, November, 1934, page 994, and in previous issues. The issue of August, 1930, contained a general summary of the proceedings of the Board, covering the period from January 1, 1928, to December 31, 1929; and a similar summary of proceedings from September 1, 1925 (the date of the inception of the Board) to December 31, 1927, appeared in the issue of October, 1928, page 1060. The text of the memorandum of the agreement made between the railways and the employees concerned for the establishment of the Board was given in these summaries.

The Canadian National Railways Employees' Board of Adjustment No. 2 was established for the purpose of disposing of outstanding grievances or disputes that might arise from the application, non-application or interpretation of the schedule of working conditions for "Clerks and other Classes of Employees as herein named," which are not adjusted between the officers of the railway and the representatives of the employees. The members of the Board are appointed for a term of one year, subject to re-appointment. The Board is composed of four members selected by the management and four members selected by the representatives of the employees concerned. The decisions of the Board are binding upon the parties to the agreement. Provision was made in the agreement constituting the Board for the appoint-

ment of an arbitrator in any case in which the Board might be unable to agree upon an award.

#### **Case No. 125—Operating Department, Headquarters.**

This case centered about the claim of a woman clerk in the General Car Accountant's Office to the position of Rolling Stock Clerk, declared vacant on March 18, 1933. The promotion had been awarded to another woman clerk, who was approximately three months junior to the claimant in point of seniority. The contention of the employees was that the senior employee should have received a fair trial on the position, and that she was competent to perform the required duties in a satisfactory manner.

The railway's contention was that the position had been vacant owing to the removal of the previous incumbent, who was inefficient, and that the junior clerk was appointed because of her experience and ability to perform the duties of the position—qualifications not possessed by the claimant. It was further contended that a clerk with a rating similar to that of the claimant had fallen down on the work required, owing to the specialized nature of the duties, and it was considered that the railway should not be called upon "to try another clerk with no experience of the work, and who, in the opinion of the supervisory officer, has not the requisite ability, when there are other clerks available who have a knowledge of the work and the ability to do it as proven by their

having satisfactorily filled the position previously."

This case was heard on August 29, 1933, but was referred back to the parties. The Board states it is now advised that the general chairman wishes to withdraw the case, which request was acceded to.

#### **Case No. 126.—Operating Department, Headquarters.**

On March 13, 1933, a general utility clerk applied for the vacant position of Per Diem Reclaims Clerk, in the General Car Accountant's office. The position was filled by a clerk junior in service to the claimant. It was contended by the employees that the claimant (who in the previous year had been passed up for a similar promotion) had the ability to perform the duties of Per Diem Reclaims Clerk and was entitled to a fair trial because of the fact that his activities as general utility clerk required him to perform many classes of work in the General Car Accountant's office, including per diem work.

The Railway's contention was that the duties of a Per Diem Reclaims Clerk was of a highly specialized nature; that his previous experience in the per diem group did not necessarily fit him for the position of reclaims clerk; that his answers were being examined on his knowledge of the requirements of the position proved his inadequacy; and that had the position been awarded to him, it "would have been to the detriment of the company, financially."

The case was heard on August 29, 1933, and referred back to the parties. Subsequently, the wish of the general chairman that the case be withdrawn was acceded to.

#### **Case No. 153.—Sleeping and Dining Car Department, Montreal.**

A porter in the sleeping and dining car department, Montreal, was dismissed from service on May 17, 1934, on a charge of "reporting for duty under the influence of liquor." It was contended by the employees that the accused at the time of his suspension, had not been given "a fair and impartial hearing" as called for under Article 3 Rule (a) of the Parlour, Sleeping and Dining Car Employees' schedule, and that other witnesses (not heard) were prepared to testify that the accused was not drunk, and further that the accused was not given an opportunity to refute evidence against him.

The Railway contended that a proper investigation had been held in accordance with Article 3 Clause (a) of the schedule; that the inspector who was inspecting the train noted the condition of the accused; and that the

inspector's conclusion was borne out by another official who declared that the accused porter was "in a state of insobriety." The inspector then telephoned the superintendent that he had removed the porter from duty. The porter had then been instructed by the inspector to report to the superintendent but had refused to do so.

At the preliminary investigation, the porter stated he was in a proper condition for duty and denied having refused to report to the superintendent. At this investigation, the local chairman requested permission to question the porter, this request being made after the official stenographer recording the proceedings had left.

The local chairman was informed he could ask the questions and that decision would then be made if they should be recorded or not. The railway's statement also declared that no mention was made at this hearing to introduce the evidence of the other witnesses that the accused was not drunk, it being considered "there was already sufficient evidence to the effect that he was under the influence of liquor when reporting for duty."

This case was heard by the Board on September 18, 1934, when additional oral evidence was submitted by both parties. The claim of the employees was denied.

#### **Case No. 159.—Sleeping and Dining Car Services, Central Region.**

A sleeping car conductor claimed that, when according to practice, sleeping car conductor's runs were bulletined he exercised his seniority in making his choice, his first being the Montreal-Toronto run, and his second the Montreal-Chicoutimi run, while his third was the Montreal-Winnipeg run (on which he had been operating for a number of years). However, he was not awarded either his first or second choice, and was again assigned to his former Montreal-Winnipeg run. He claimed that although third senior conductor in the district, sleeping car conductors "with little or no previous experience have been assigned to operate on trains 15 and 6 between Montreal and Toronto." It was also contended that the claimant was not awarded the run of his second choice because he did not speak French whereas he speaks the French language fluently.

Quoting Article 2 Rule (k) of the Employers' Schedule—"All employees will be given their choice of runs according to seniority, fitness and ability when Fall change of time schedule goes into effect"—the railway contended that the conductor in this case was not allowed his first choice (Montreal-Toronto) "as it was considered by his super-

intendent that he did not have the necessary fitness and ability to carry out the exacting duties on this run."

It was explained that the sleeping car conductor's duties on the Montreal-Toronto run are much more complicated than on any other run in the system because of the operation of pool trains with an intricate system of reports, tickets, etc. It was also stated that the claimant's record in the past indicated "extreme carelessness and negligence" making it necessary to "frequently assess him demerit marks."

The conductor was not given his second choice because it was not known to the superintendent that he could speak French, the conductor having failed to answer this question on the application form.

The decision of the Board was that the conductor's record justified the action of the management in not awarding the first choice and that his not being assigned to his second choice resulted from his failure to complete the application form. The claim of the employee was therefore denied.

#### **Case No. 160—Sleeping and Dining Car Services, Central Region.**

The steward and crew of a dining car claimed overtime for layover lost while attending an investigation at Toronto on official instructions. Their car had been picked up at Brockville by Train No. 17 en route to Toronto. At the time their car was attached they were in bed. It was alleged that during that night a quantity of liquor and cigars were stolen from a business car on the train. All members of the crew were instructed to report to the investigation department in Toronto, and in doing so lost one-half day layover at their home terminal. No charge was laid against any member of the crew.

For the time lost, on account of being called as witnesses, each member of the crew submitted time slips claiming one-half day's pay, but the railway refused to honour their claims.

The employees contended that under the schedule they were entitled to one-half day's wages for the one-half day of home terminal layover.

The Railway contended that any member of the crew had access to the business car, and on this account "it was considered that there was a possibility that any of these employees might have had guilty knowledge of the alleged theft." They were therefore instructed to report for investigation, not as witnesses, but for the purpose of being given a fair and impartial hearing.

The Railway further contended that the employees lost no wages and had been properly compensated in accordance with the terms of Article 3 Rule (a) of the schedule which provides that where employees are found blameless in such a case they will be reinstated and paid schedule wages for the time lost, but makes no provision for compensation for the rest period lost while attending investigation.

The claim of the employees was sustained.

#### **Case No. 164—Operating Department, Central Region.**

A station porter at Montmagny, Quebec, claimed pay at a freight checker's rate, having been assigned to remain exclusively at the freight shed, checking freight, etc. Prior to June, 1927, there was only one station porter employed at Montmagny who worked both at the station and the freight shed. His salary was \$101 per month. Then a second station porter was put on at the same salary and was detailed to station work and a certain amount of freight shed duties. The senior porter was then assigned entirely to freight shed work. When the senior station porter was retired on pension on July 1, 1932, the claimant in this case was promoted to the position and given the same duties as his predecessor.

The employees contention was that the claimant is performing the duties of freight checker and should be classified as such at a rate of \$130 per month. The Railway contended that when the second porter was put on, arrangements were made to make way cars end at Montmagny, and require the porters to unload or load the wayfreight, thus saving detention to wayfreight trains who previously did this work. The senior porter and, subsequently, the claimant, were then assigned to remain exclusively at the freight shed, checking freight, unloading and loading, etc. Since station porters are required to perform a variety of duties, it was further contended that there was no violation of the schedule or no change of duties in the position.

The claim of the employees was denied.

#### **Case No. 165—Operating Department, Central Region.**

Prior to May 15, 1934, two clerks, in addition to a chief clerk, a freight clerk and a labourer formed the staff at Noranda. On that date, due to a reduction in activity, the position of one clerk was abolished. There was a re-assignment of duties, and all of the car checking work was delegated to the remaining clerk, rated at \$95 per month.

The employees' contention was that this clerk is now performing identically the same work as a number of other car checkers on the Central Region who are paid \$106 and \$111 per month. It was accordingly claimed that the clerk should be classified as a car checker at \$106 per month in conformity with the rates paid other employees for the same duties.

On the part of the Railway it was contended that the position held by this employee was

one of two specifically provided for in the schedule of 1929; that there never was any car checker exclusively employed at Noranda; that car checking work was included in the duties of the \$95 a month clerks; that there had been no change in the duties of the position; and that no exception was taken in regard to the rate of pay for this position until January, 1934.

The claim of the employees was denied.

## SOCIAL LEGISLATION IN PARLIAMENT

### Provisions of Limitation of Hours of Work Act and Weekly Rest in Industrial Undertakings

**L**EGISLATION providing for the application of the eight-hour day (Bill No. 21) as well as the weekly day of rest (Bill No. 22) in industrial undertakings was introduced in the House of Commons on February 22 by the Prime Minister, Right Honourable R. B. Bennett, and received first reading. Both measures are in accordance with Conventions of the International Labour Organization of the League of Nations, and with the Labour Clauses of the Treaty of Versailles (LABOUR GAZETTE, December, 1919, page 1425).

On February 8, the House of Commons agreed to motions made by the Prime Minister declaring it expedient to approve of five Draft Conventions of the International Labour Organization, including the two which are now being incorporated into legislation (LABOUR GAZETTE, February, 1935, page 94).

Bill 21 is cited as The Limitation of Hours of Work Act, and designates the industrial undertakings to which it applies, as follows:—

(a) Mines, quarries, and other works for the extraction of minerals from the earth;

(b) Industries in which articles are manufactured, altered, cleaned, repaired, ornamented, finished, adapted for sale, broken up or demolished, or in which materials are transformed; including shipbuilding and the generation, transformation, and transmission of electricity or motive power of any kind;

(c) Construction, reconstruction, maintenance, repair, alteration, or demolition of any building, railway, tramway, harbour, dock, pier, canal, inland waterway, road, tunnel, bridge, viaduct, sewer, drain, well, telegraphic or telephonic installation, electrical undertaking, gas work, waterwork or other work of construction, as well as the preparation for or laying the foundations of any such work or structure;

(d) Transport of passengers or goods by road or rail, including the handling of goods at docks, quays, wharves or warehouses, but excluding transport by hand.

It is declared that in the above-mentioned industries no person shall be employed "for hours in excess of eight in the day or forty-

eight in the week" except in specified cases or circumstances. This provision does not apply to persons holding positions of supervision or management, or those employed in a confidential capacity.

It is also stipulated that where by law, custom, or agreement between employers' and workers' organizations, or where no such organizations exist, between employers' and workers' representatives, the hours of work on one or more days of the week are less than eight, the limit of eight may be exceeded on the remaining days of the week with the sanction of the Governor in Council or by agreement between such organizations or representatives: Provided, however, that in no case shall the daily limit of eight hours be exceeded by more than one hour.

Where persons are employed in shifts the eight hour day and the forty-eight hour week may be exceeded "if the average number of hours over a period of three weeks or less does not exceed eight per day and forty-eight per week."

The limit of working hours prescribed by the Act may be exceeded "in case of accident, actual or threatened, or in case of urgent work to be done to machinery or plant, or in case of *vis major*, but only so far as may be necessary to avoid serious interference with the ordinary working of the undertaking."

Another exemption from the prescribed limitation is permitted where the nature of the work requires a continuous process carried on by a succession of shifts. In such cases the working hours "shall not exceed fifty-six in the week on the average."

In exceptional cases "where it is recognized that the daily limit of hours of work cannot be applied," and where employers and employees have agreed to increase the daily limit, the Governor in Council is empowered "to give effect to such agreements, and permit

in such cases the said limit of hours to be exceeded," provided "that the average number of hours per week over the number of hours covered by any such agreement shall not exceed forty-eight."

The Governor in Council may also make regulations permitting:—

(a) Permanent exceptions to the limits of hours of work fixed by this Act in case of preparatory or complementary work which must necessarily be carried on outside the limits laid down for the general working of an establishment, or for certain classes of workers whose work is essentially intermittent;

(b) Temporary exceptions to the hours of work fixed by this Act, so that establishments may deal with exceptional cases of pressure of work.

Regulations under this section are to be made "only after consultation with the organizations of employers and workers concerned, if any such organizations exist, and the regulations shall fix the maximum of additional hours in each instance, and the rate of pay for additional hours shall not be less than one and one-quarter times the regular rate."

Provision is made for the conspicuous posting by employers of notices determining the working periods, and all regulations under the Act are to be published in the *Canada Gazette*. Complete information respecting continuous processes, agreements, and regulations is to be communicated to the International Labour Office at Geneva.

Violation of the regulations or failure to comply with any provision by any employer is punishable upon conviction by a "fine not exceeding one hundred dollars and not less than twenty dollars in addition to any other penalty prescribed by law for the same offence."

### The Weekly Rest in Industrial Undertakings Act

Bill 22, cited as the Weekly Rest in Industrial Undertakings Act, includes within its scope the same industrial undertakings as are defined in Bill 21 with the addition of "inland waterways."

The provisions respecting the rest period are given in Section 3, as follows:—

(1) The whole of the staff employed in any industrial undertaking, public or private, or in any branch thereof, shall except as otherwise provided for herein be granted by the employer in every period of seven days a period of rest comprising at least twenty-four consecutive hours.

(2) This period of rest shall wherever possible be granted simultaneously to the whole of the staff of each undertaking.

(3) This period of rest shall wherever possible be the Lord's Day as defined in the *Lord's*

*Day Act*, chapter one hundred and twenty-three of the Revised Statutes of Canada, 1927.

The Governor in Council is empowered to make regulations for total or partial exceptions, and for compensation periods of rest, "except in cases where agreements or customs already provide for such periods." All regulations and amendments are to be communicated to the International Labour Office at Geneva.

Where the weekly rest given does not coincide with the Lord's Day as defined in the *Lord's Day Act*, the "employer shall make known the days and hours of rest by means of notices posted conspicuously in the establishment or any other convenient place, or in any other manner determined by the Governor in Council by regulation."

Subsection two of section five of the *Lord's Day Act* is repealed under this new measure. This section, with its repealed subsection, reads as follows:—

Except in cases of emergency, it shall not be lawful for any person to require any employee engaged in any work of receiving, transmitting or delivering telegraph or telephone messages, or in the work of any industrial process, or in connection with transportation, to do on the Lord's Day the usual work of his ordinary calling, unless such employee is allowed during the next six days of such week, twenty-four consecutive hours without labour.

(2) This section shall not apply to any employee engaged in the work of any industrial process in which the regular day's labour of such employee is not more than eight hours' duration.

With the exception of this section the operation of any provision of the *Lord's Day Act* is not affected.

The same penalties are provided as in Bill 21.

*Unemployment Insurance.*—The Employment and Social Insurance Act (which is reviewed in the last issue of the *LABOUR GAZETTE* at page 135) has received its third reading in the House of Commons and only requires ratification by the Senate.

Following announcement by Hon. David Croll, Ontario Minister of Welfare, of a health insurance plan as noted in this issue, comes the result of a poll on the question by nearly 1,000 physicians of the province. The questionnaire to the doctors read: "Do you approve of the principles of health insurance whereby in the Province of Ontario those below a certain income will be provided with adequate medical service?" To this, 887 doctors replied affirmatively; 30 were opposed and 17 undecided. If the scheme is adopted 853 doctors expressed willingness to act as practitioners, 35 declined and 31 were undecided. To the direct question, "Should the Ontario Medical Association outline a plan of health insurance?" 889 voted in favour, 35 were opposed and 31 were undecided.

## ANNUAL REPORT OF THE DEPARTMENT OF LABOUR OF THE PROVINCE OF QUEBEC FOR 1933-34

THE administrative activities of the Department of Labour of the Province of Quebec are detailed in the annual report for the year ending June 30, 1934, this being the second review covering a year's operations since the Department was established separately from the former joint Department of Public Works and Labour. The functions of the Department of Labour include the instituting and controlling of inquiries into important industrial questions as well as into labour conditions. The Department is also charged with the carrying out of any Acts respecting riots near public works; disputes between employers and employees; municipal strikes and lockouts; employment bureaus; minimum wages for women; safety in public buildings; inspection of scaffolding; protection of the public from fire; installation of lightning rods; safety and inspection of industrial establishments; stationary engineers; weekly day of rest for industrial employees; labour accidents; workmen's compensation; and generally everything concerning artisans, workmen, day and manual labourers.

With reference to the operation of the Collective Labour Agreements Extension Act, the following results were reported:—(a) co-operation between employers and employees in the same industry; (b) curbing of unfair competition; (c) social peace and fewer strikes; and (d) development of workmen's organizations and employers' associations.

The report of the chief inspector of labour indicated that 4,058 different inspections were made during the year as compared with 3,718 a year ago. The registering of boys and girls of 14 to 16 years of age working in industrial establishments reached the figure of 773 for the current year. If these boys and girls are unable to read and write correctly, they are obliged to produce a certificate of study and attendance at night school.

The inspectors enforcing the Industrial Establishments' Act worked with the employers' association for the prevention of labour accidents. Through daily reports of accidents sent by the Workmen's Compensation Commission, it has been possible to make much fuller investigation and to draw up more effective directions for employers in the prevention of labour accidents.

The inspection of public buildings totalled 777 during the year, and several proprietors

were compelled to put in safety ladders to enable the premises to be vacated in case of fire.

Under Pipe-Mechanics' Act, which came into force during the year, journeymen and apprentices pipe-mechanics acting as such in cities and towns of over 10,000 population have to provide themselves with a licence obtained after an examination as to their competency. The Board of Examiners' first report shows that, during the fiscal year 1933-34, the following licences were issued; contractors' licences, 401; journeymen's licences, 759; and apprentices' licences, 368.

The Pressure Vessels Act and the Stationary Enginemen's Act were enforced by a board of examiners. With the help of fifteen inspectors (holders of first class stationary enginemen's diplomas), this inspection board checked all the plans and specifications of the pressure vessels brought into the Province and also supervised installation.

*Board of Examining Electricians.*—The inspections of electrical installations reached the number of 88,277, which exceeds by more than a thousand that of last year. The annual inspections of public buildings totalled 3,385. The inspection became obligatory under the amendments to the Act made by the Legislature last year.

*The Provincial Employment Bureaus.*—This service has considerably increased its activities. Last year 74,542 unemployed persons registered at the various employment offices, as compared with 76,861 during the period under review; positions offered reached 38,100, as compared with 26,788 in the year previous. The number placed last year amounted to 21,006, and this year the number was 30,490, an improvement of over 30 per cent.

*Trade Disputes and Conciliation.*—The report of the registrar deals with conciliation activities in various disputes. Details were given of the arbitration proceedings in several of the chief cases under the Quebec Trades Disputes Act.

*Labour Legislation.*—The report includes the text of labour legislation enacted during the period covered by the report. A review of this legislation was outlined in the *LABOUR GAZETTE*, May, 1934, page 438.

Included also is the report of the Minimum Wage Board reviewed in the following article.

## Women's Minimum Wages in Quebec

THE eighth annual report of the Women's Minimum Wage Commission of the province of Quebec, which reviews the administration of the Act for the year ending June 30, 1934, records a definite increase in the index employment, reflecting a decided change from the tendency of the past two years. The total number of women subject to the minimum wage enactments in 1934 was 35,935 as compared with 30,362 in 1933. Of the 1934 total, 22,083 were in the city of Montreal (19,254 in 1933) while the number of workwomen in the rest of the Province was 13,852 (11,108 in 1933).

An analysis of the statistics also indicates an increase in the weekly basic wage (the sum payable to workwomen if they work through the whole working period—a period determined by the enactments). In Montreal, for all industries, this basic wage per workwoman in 1933 was \$12.25 per week, which increased to \$12.64 in 1934. Throughout the rest of the province, this rate averaged \$9.77 in 1933 and \$9.84 in 1934. However, as the report points out, there is a fairly marked difference between the basic wage, and the actual wage. The total wages paid in 1934 to 35,995 workwomen was \$352,532.35 as compared with \$294,815.02 to 30,362 employees in 1933. On the basis of these totals, the average actual wage in all industries for the whole province works out at \$10.24 per week in 1934 and \$9.70 per week in 1933.

Discussing the problem arising out of the fact that approximately 60 per cent of women in the province are on piece work, the report states:—

"This system of working by the piece gives the employer the prerogative of having at his disposal a number of workwomen out of proportion to his needs. The work done is then divided amongst a great many more workwomen; the latter remain at the workshop during the entire working period, but sometimes have work only a few hours per day. In such cases, the wage received is fairly small, this occasions discontent among the workwomen. The latter make complaints which are followed by investigations which the piece work system makes much more difficult. The Commission examined various methods to put an end to this state of affairs, without, however, restricting the employer's liberty to adopt the piece work system, the day work, hour work or even bonus system; it came to the conclusion that all the enactments be revised and the present system of supervision by means of a check upon the

extent of the experience of each workwoman be replaced by the simple method of exacting a percentage of experienced workwomen as compared with apprentices in a given establishment."

It was considered that the adoption of this method would stabilize employment conditions, result in payment on a merit basis, improve relations between employer and employee, and facilitate the activities of the department's inspection service. Accordingly, this plan was incorporated in the revision of several enactments which followed joint conferences of employers and employees.

During the year the Commission took action in 47 suits against employers guilty of violating the Act. Convictions were secured in all these cases, in which the fines collected amounted to \$1,941. The Commission discovered a much greater number of infringements, but considered that the object of the Act was "to secure a fair remuneration for workwomen rather than indulge in prosecutions" so in these cases it was decided to avoid proceedings against a number of employers who agreed to deliver the balance of wages due to employees. In this way, the Commission collected a total of \$4,504.02 from 52 employers for a total of 93 workwomen, the individual amounts ranging from \$1.19 to \$135.02.

*Permits.*—One of the administrative problems is that of the issuing of permits which authorize aged or infirm women, or those placed at a disadvantage, to work at a wage lower than that established by the regulations. Recent amendments to the Act also allow the Commission to grant special permits by which young women, who have served their apprenticeship may receive a lower wage if the work they are doing is of little importance and requires very slight experience. The number of permits in force on July 1, 1934, was 1,426 of which number 117 were issued on behalf of aged or infirm women and 1,309 to women engaged in minor work.

The chief statistics for 1934 for each industry under the Act are summarized as follows:

*Laundries, Dye Works.*—For the city of Montreal—number of firms, 54; number of women employed, 1,102 (1,192 in 1933); average weekly wage per workwoman, \$9.75 (\$9.88 in 1933). For the rest of the province—number of firms, 24; number of women employed, 233; average weekly wage per workwoman, \$7.70 (\$8.63 in 1933)

*Printing Industry.*—For the city of Montreal—number of firms, 85; number of women employed, 588; average weekly wage per workwoman, \$9.88 (\$11.20 in 1933). For the rest of the province—number of firms, 37; number of women employed, 206; average weekly wage per workwoman, \$9.07 (\$9.11 in 1933).

*Textile Industry.*—For the city of Montreal—number of firms, 38; number of women employed, 2,458; average weekly wage per workwoman, \$11.96 (\$10.72 in 1933). For the rest of the province—number of firms, 61; number of women employed, 7,188; average weekly wage per workwoman, \$9.92 (\$10.40 in 1933).

*Leather Industry.*—For the city of Montreal—number of firms, 77; number of women employed, 2,077; average weekly wage per workwoman, \$10.96 (\$10.34 in 1933). For municipalities over 3,000 population—number of firms, 50; number of women employed, 1,182; average weekly wage per workwoman, \$8.30 (\$7.16 in 1933). For the rest of the province—number of firms, 32; number of women employed, 942; average weekly wage per workwoman, \$7.88 (\$7.35 in 1933).

*Women's, Men's and Boys' Clothing.*—For the city of Montreal—number of firms, 185; number of women employed, 2,511; average weekly wage per workwoman, \$12.49 (\$10.97 in 1933). For the rest of the province—number of firms, 32; number of women employed, 1,597; average weekly wage per workwoman, \$7.68 (\$8.16 in 1933).

*Hat and Cap Factories.*—For the city of Montreal—number of firms, 46; number of

women employed, 958; average weekly wage per workwoman, \$13.73 (\$13.31 in 1933).

*Women's and Children's Dresses, Silk Underwear, etc.*—For the city of Montreal—number of firms, 161; number of women employed, 3,590; average weekly wage per workwoman, \$10.78 (\$10.18 in 1933).

*Manufacturers of Overalls, Mackinaws, Cottons, etc.*—For the city of Montreal—number of firms, 83; number of women employed, 3,241; average weekly wage per workwoman, \$9.61 (\$9.98 in 1933). For the rest of the province—number of firms, 27; number of women employed, 1,360; average weekly wage per workwoman, \$8.04 (\$7.35 in 1933).

*Tobacco, Cigar and Cigarette Industry.*—For the city of Montreal—number of firms, 22; number of women employed, 3,079; average weekly wage per workwoman, \$10.25 (\$9.05 in 1933). For the rest of the province—number of firms, 25; number of women employed, 854; average weekly wage per workwoman, \$7.07 (\$7.02 in 1933).

*Fur Industry.*—For the city of Montreal—number of firms, 95; number of women employed, 576; average weekly wage per workwoman, \$13.82 (\$14.60 in 1933). For the rest of the province—number of firms, 40; number of women employed, 221; average weekly wage per workwoman, \$11.91 (\$10.88 in 1933).

*Food Industry.*—For the city of Montreal—number of firms, 11; number of women employed, 74; average weekly wage per workwoman, \$6.63 (\$6.54 in 1933).

## COLLECTIVE LABOUR AGREEMENTS EXTENSION ACT OF QUEBEC

### Agreements Recently Made Obligatory and Further Applications

RECENT proceedings under the Collective Labour Agreements Extension Act of Quebec include the extension to all employees and employers in the industry and district by Orders in Council of agreements affecting bakers at Sherbrooke, clothing workers employed in the manufacture of men's and boys' clothing throughout the Province, building trades in Hull and district, changes in the Orders in Council affecting building trades in Quebec City and bricklayers and plasterers at Three Rivers; applications for further changes in the Order in Council for building trades at Quebec City and district; applications for the extension of new agreements affecting glove makers throughout the Province, certain building trades at Three Rivers and building trades at Montreal.

Under the Collective Labour Agreements Extension Act Quebec the text of which was printed in the LABOUR GAZETTE May 1934, page 417, applications may be made to the provincial Minister of Labour, by any association of employees or employers who are parties to a collective agreement, to have those terms of such agreement which concern rates of wages and hours of labour made obligatory on all employees and employers in the same trade or industry within the territorial jurisdiction determined by the agreement. The application is then printed in the *Quebec Official Gazette*, and during the following thirty days, objections may be made to the Minister of Labour. After this delay, if the Minister of Labour deems that the provisions of the agreement "have acquired a preponderant

significance and importance" that would make the establishment of these conditions advisable, an Order in Council may be passed making the terms obligatory on all employees and employers in the trade or industry in the territory included in the agreement, from the date of the publication of the Order in Council in the *Quebec Official Gazette* and for the duration of the agreement. The provisions of an agreement thus made obligatory are to govern all individual labour contracts in the specified trades and district, except that those individual contracts which are to the advantage of the employee will have effect unless expressly prohibited in the agreement. Applications for the extension of certain agreements and Orders in Council subsequently passed under this Act have been noted in the *LABOUR GAZETTE* each month beginning in June, 1934.

**BAKERS, SHERBROOKE.**—An Order in Council, approved February 16, 1935, and published in the *Quebec Official Gazette*, February 23, makes obligatory the conditions of an agreement between the Master Bakers' Association of the St. Francis district and the Central Council of the National Catholic Unions of Sherbrooke. (The application for its extension was noted in the *LABOUR GAZETTE*, February, page 149.) The terms of the agreement thus made obligatory (with corrections in Clauses I and II made as requested by the parties) are as follows:—

1.—Minimum of Wages:—

(a) Bakery owners and master-bakers employing three workmen-bakers or more, must remunerate them as follows:—

	Per week
1st workman-baker . . . . .	\$20 00
2nd workman-baker . . . . .	17 00
3rd workman-baker and following..	13 00

(b) Bakery owners and master-bakers employing less than three workmen-bakers must remunerate them as follows:—

	Per week
1st workman-baker . . . . .	\$17 00
2nd workman-baker . . . . .	13 00

In the event of an owner preparing the dough and baking it himself, he shall be considered as a master workman-baker.

(c) Apprentices' wages will be fixed by the Joint Committee but must not, in any case, be less than \$6 per week.

Bakeries must never bake more, per week, than 30 bags of flour per each workman-baker employed. Exception is made for the following bakers: Fontaine & Fils, Ltee, and Walter Allatt or any other bakery which may be equipped with special machinery; in such exceptional cases, the maximum bakery per week shall be 40 bags of flour per each workman-baker.

**NOTE.\***—In the case where a bakery exceeds the maximum hereinabove fixed of 30 to 40 bags per baking, per week and per workman-baker, overtime at the rate of 65 cents per each bag will be divided among the workman-bakers.

II.\*—The wages of workman-bakers and apprentices to be paid weekly.

III.—The territorial jurisdiction determined by the present agreement comprises the town of Sherbrooke.

IV.—The present agreement shall be valid from the date of the publication in the *Quebec Official Gazette* of the Order in Council approving the present request and shall remain in force until the 1st of July, 1935; it shall then renew itself automatically each year, unless a notice be given by one of the contracting parties to the other, that he desires to have the same cancelled. Such notice must be given on or before the 1st day of June.

**CLOTHING WORKERS, PROVINCE OF QUEBEC.**—An Order in Council, approved February 27, 1935, and published in the *Quebec Official Gazette*, March 2, makes obligatory the terms of an agreement made between the Associated Clothing Manufacturers of the Province of Quebec, Inc., the Montreal Clothing Contractors' Association, Inc., certain other clothing manufacturers and the Amalgamated Clothing Workers of America and the Montreal Joint Board of the Amalgamated Clothing Workers of America, with certain modifications made following objections received from interested parties, such modifications having been accepted by the contracting parties. These modifications include the establishment of three zones within the Province, with lower minimum wage rates in two of the zones, in which two zones a 48-hour week is permitted, and the addition of Clauses 10a, 10b, 10c and 10d. (In the original agreement submitted with the application for extension, the wage rates shown below for Zone I and the 44-hour week were to apply throughout the Province.) The original agreement also contained a clause providing that factories were not to be allowed to work part of their employees on the piece rate system and part on the hourly rate system with the exception that 5 per cent of employees might be employed on a piece work basis in a factory on the hourly basis, or 5 per cent on an hourly basis in a factory working on a piece work basis. This clause (Clause 7) is deleted in the Order in Council. The date of the coming into effect of the Order in Council is fixed at April 1. The terms of the agreement as made obligatory are as follows:—

1. (Article 1 states the work to which the agreement applies, that is, the manufacture of men's and boys' clothing—coats, pants, vests, uniforms, etc.)

2.\* The territorial jurisdiction determined by the present agreement comprises all the Province of Quebec. But the territory for the application of the agreement as amended, is divided into three zones, described as follows:—

Zone No. 1: comprising the Island of Montreal and a perimeter of 10 miles around its limits;

Zone No. II: comprises a perimeter of 75 miles outside and around Zone No. I;

Zone No. III: comprises all the Province less Zones Nos. I and II hereinabove designated.

3.\* The hours of labour for the employees in the said industry are fixed as follows:—

Zone No. I: forty-four hours shall constitute one week's work, in the following manner:

From 8 o'clock in the morning until 6 o'clock in the evening, with one hour for lunch, on Mondays, Tuesdays, Wednesdays and Thursdays, and from 8 o'clock in the morning until 5 o'clock in the evening, with one hour for lunch, on Fridays.

Any work performed after the hours hereinabove specified shall be considered as overtime, and such work shall be paid at the rate of time and one-half.

Zones Nos. II and III: forty-eight hours shall constitute one week's work, in the following manner:—

From 8 o'clock in the morning until 6 o'clock in the evening, with one hour for lunch, on Mondays, Tuesdays, Wednesdays and Thursdays; from 8 o'clock in the morning until 5 o'clock in the evening, with one hour for lunch, on Fridays; and from 8 o'clock in the morning until noon, on Saturdays.

Any work performed after the hours hereinabove specified shall be considered as overtime and such work shall be paid at the rate of time and one-half.

4.\* The following minimum rate of wages for the employees in the said industry are fixed, with regard to the different classifications and ability required in the making of garments, as follows:—

For the making of garments, the operations are divided into eight classes, to wit:—

Classes	Rate of Wages per Hour		
	Zone I	Zone II	Zone III
A . . . . .	\$0 68	\$0 61	\$0 59
B . . . . .	0 61½	0 55½	0 52½
C . . . . .	0 57	0 51	0 48
D . . . . .	0 50	0 45	0 42½
E . . . . .	0 41	0 37	0 35
F . . . . .	0 33	0 30	0 28
G . . . . .	0 28½	0 25½	0 24½
H—1st six months	0 13½	0 12½	0 11½
2nd six months	0 18	0 16	0 15
3rd six months	0 21½	0 19	0 18
4th six months	0 25	0 22	0 20
After two yrs.	0 28½	0 25	0 22

### Classifications and Definitions

(Detailed descriptions of the separate operations listed below which are included in the Order in Council are omitted here.)

#### COATS DEPARTMENT

5. The following is a list of operations which should be classed in accordance with the above minimum rates:—

Class A.—Skilled cutters and head operators; shape sewers on unbasted coats.

Class B.—Skilled trimmers and pocket makers.

Class C.—Shapers, 2nd basters, edge basters; offpressers; fitters and top collar makers.

Class D.—Pocket tackers; joiners (2nd operators); examiners and lining makers.

Class E.—Lining basters; undercollar basters; steam machine pressers; underpressers; choppers and machine edge basters.

Class F.—Sleeve makers; lapel makers; arm-hole basters and buttonhole makers.

Class G.—Coat finishers; button sewers; general hands; inside coat tackers; bottom of collar and leaf of collar fellers; canvas makers and canvas basters.

Class H.—Ticket pocket makers; sleeve lining tackers; undercollar makers; fellers of bottom of sleeve lining; pocket closers; basting pullers and buttonhole tackers.

#### APPRENTICE CUTTERS AND TRIMMERS

No one working on any of the above operations or part thereof, or making a complete garment, Class A to H inclusive, whether working on hourly rate system or piece rate system, or so much for a complete garment, shall receive less than the set minimum, with the exception of that listed under the heading of "Special Clauses, Coats, Pants and Vest Departments."

(NOTE.—This last paragraph is also repeated under the headings "Pants Department" and "Vest Department.")

An apprentice chopper is a beginner and shall work under the following schedule:—

	Per week
Start at . . . . .	\$ 7 00
At the end of 6 months . . . . .	9 00
At the end of 12 months . . . . .	11 00
At the end of 18 months . . . . .	13 00
At the end of 24 months . . . . .	15 00
At the end of 30 months . . . . .	18 00

An apprentice trimmer is a beginner and shall work under the following schedule:—

	Per week
Start at . . . . .	\$ 7 00
At the end of 6 months . . . . .	8 00
At the end of 12 months . . . . .	9 00
At the end of 18 months . . . . .	10 00
At the end of 24 months . . . . .	11 00
At the end of 30 months . . . . .	12 50
At the end of 36 months . . . . .	15 00

5a.\* The weekly wages for choppers' apprentices and trimmers' apprentices will be 10 per cent in Zone No. II and 15 per cent in Zone No. III less than those in force in Zone No. I.

#### PANTS DEPARTMENT

The following is a list of operations which should be classed in accordance with the above minimum rates:—

Class A.—Skilled cutter.

Class B.—A front and back pocket maker and trimmer and seamer.

Class C.—A lining stitcher and leg presser.

Class D.—A lining sewer and top presser.

Class E.—A pocket maker and outside seamer on boys' shorts and bloomers and juvenile pants; lining sewer and stitcher on boys' shorts and bloomers and juvenile pants.

Class F.—A fitter, underpresser, trimming maker, buttonhole maker and inside seamer on boys' shorts and bloomers and juvenile pants.

Class G.—A fly maker; pocket serger; tacker; button sewer; loop maker; finisher and examiner.

Class H.—A cleaner and buttonhole tacker.

#### VEST DEPARTMENT

The following is a list of operations which should be classed in accordance with the above minimum rates:—

Class A.—Skilled cutter, tape sewer and pocket maker.

Class B.—Skilled trimmer and 2nd operator.

Class C.—Offpresser.

Class D.—Fitter.

- Class E.—General underpresser.  
 Class F.—Hand baster, lining maker, veve sewer and buttonhole maker.  
 Class G.—Finisher, button sewer, brusher and examiner, ticket sewer; general hand.  
 Class H.—Cleaner and buttonhole tacker.

### Special Clauses

#### COATS, PANTS AND VEST DEPARTMENTS

6. The said wages are to be paid for fully in cash.

7. (Article 7 of submitted agreement, certain rules as to piecework, was deleted in the Order in Council.)

8. It is understood that when employees are employed by a contractor and a violation is made on the part of the contractor by him paying the employees less than the minimum rate and in case a judgment is taken against the violator, that judgment should also be against the manufacturer who has furnished that contractor with work and if it is proved that he has not paid to the contractor the established rate prevailing per garment for that particular grade. Then the manufacturer is to be held responsible to the extent of the difference in proportion to the amount of work furnished the contractor.

### General

9. It shall also be obligatory for every employer to post a copy of this agreement prominently in their establishment, printed both in English and French, where employees will at all times be able to read it.

10. This Agreement shall supersede all agreements, whether collective or otherwise, that may exist between employer or employers and employee or employees except the collective agreements which now exist between the several parties hereto save and except that under no circumstances shall wages be paid under the minimums fixed by the present agreement nor shall the hours of labour be over the maximums fixed by the present agreement.

10a.† Any strike or lockout having for its object a change of the conditions of the present Order in Council, is prohibited.

10b.† Employers actually paying higher wages than those fixed by the present Order in Council are prohibited from reducing them during the duration of the present agreement.

10c.† The contracting parties hereto shall organize a joint Provincial committee wherein employers and employees shall be equally represented, Zone No. I being entitled to a representation in number equal to Zones Nos. II and III together.

The Joint Provincial Committee, for the purpose of administering each particular Zone, shall establish a first sub-committee having jurisdiction over Zones Nos. I and II and a second sub-committee having jurisdiction over Zone No. III.

10d.† The sub-committee shall have the right, subject to ratification by the Joint Provincial Committee, to establish for each class of workmen a minimum production.

A workman not habitually attaining his minimum production may be entered into the next lower class, provided that upon recommendation of a sub-committee, he obtains a permit from the Joint Provincial Committee.

11.\* The present agreement shall come into force on the 1st of April, 1935, and shall remain

in force until the 1st of January, 1936. It shall renew itself automatically each year unless one of the following contracting parties, to wit: the Amalgamated Clothing Workers of America and the Montreal Joint Board of the Amalgamated Clothing Workers of America; the Associated Clothing Manufacturers of the Province of Quebec, Inc.; The Montreal Clothing Contractors' Association, Inc., gives notice to the two other said parties of its intention of amending or revoking same at least ninety days before the expiration of the term of such contract.

**BUILDING TRADES, HULL.**—An Order in Council, approved February 12, 1935, and published in the *Quebec Official Gazette*, February 16, makes obligatory the terms of an agreement between certain general contractors and the Building Trades Council of Ottawa District, Incorporated, representing certain National Catholic building trades unions, the terms of which are as follows:—

1. (a) The words "journeymen-bricklayers," in the present agreement, signify and comprise any workmen who lay bricks, terra-cotta, artificial stone and block gypsum;

(b) The word "mason" signifies any person who lays natural or artificial stone or granite;

(c) By "carpenters and joiners" it is meant any labourer who assembles pieces of wood, does carpentry work, repairs wooden objects, executes any wood work, on construction;

(d) The words "journeymen-plasterers" designate any workman who does the work of plastering, celanite, mortar, cement, stucco, moulding cornices, laying of plaster ornaments and the pouring of said ornaments;

(e) The words "stationary engine men" signify mechanics in charge of an installation of motive power, under the Stationary Engine Men's Act (R. S. Q., 1925, C. 184 and amendments);

(f) The word "mechanics" signifies and comprises any mechanic in charge of a portable motor engine;

(g) The word "labourer" signifies any man who does unclassified classified work and is employed as a helper;

(h) Notwithstanding the foregoing definitions, any workman who holds a certificate of competence either from the Board of Examiners established under article 7, paragraph 2, of the extension Collective Labour Agreement Act or from his own Professional Association, pursuant to article 10 of the same Act, shall be classed as journeyman. Moreover, any unclassified labourer or employee shall benefit by the Act respecting the present Collective Labour Agreement pursuant to the provisions of article 10 of the same Act.

2. (a) In the city of Hull and within a radius of 10 miles of its limits, the rate of wages shall be the following in the different trades hereinafter mentioned:—

Trades	Wages per hour
Bricklayers.. . . .	\$0 90
Masons.. . . .	0 90
Plasterers.. . . .	0 70
Carpenters and joiners.. . . .	0 65
Common labourers and helpers.. . . .	0 40
Mortar makers and Celanite mixers.. . . .	0 45
Plaster pourers.. . . .	0 45
Hod carriers.. . . .	0 45
Stationary and mechanic Enginemen.. . . .	0 65
Drillers.. . . .	0 50

\* As amended in the Order in Council.

† Added in the Order in Council.

(b) Notwithstanding the provisions of the preceding paragraph and with the exception of the city of Hull and within a radius of 10 miles of its limits, it is stipulated and agreed that in all the municipalities of the said jurisdiction, determined in article 5, having a population of less than five thousand (5,000) persons, according to the last census of the Dominion of Canada where the general building contracts whereof the total cost, salaries and material included, is less than \$5,000, the following rate of wages for the different trades hereinafter mentioned shall be put in force, to wit:—

Trades	Wages per hour
Bricklayers.. . . .	\$0 80
Masons.. . . .	0 80
Plasterers.. . . .	0 65
Carpenters and joiners.. . . .	0 60
Common labourers and helpers.. . . .	0 35
Mortar makers and Celanite mixers.. . . .	0 40
Plaster pourers.. . . .	0 40
Hod carriers.. . . .	0 40
Stationary and mechanic Enginemenn.. . . .	0 60
Drillers.. . . .	0 45

3. Any work done outside the regular hours will be paid time and a half, until midnight, and double time after midnight.

4. The hours of labour shall be in conformity with the provisions of the Order in Council No. 1253 of June 14, 1933, for the carrying out of the Act respecting the limiting of working hours (23 Geo. V, ch. 40). For construction work not subject to the said Act, the regular working day will be eight hours for labourers, helpers and common workmen.

(Hours are thus limited to 8 per day with a 40-hour week, except for contracts entered into or assisted by provincial, municipal or other local authorities, for which hours are limited to 6 per day and 36 per week, using a two-shift per day system, LABOUR GAZETTE, July, 1933, page 701.)

5. The territorial jurisdiction determined by the present agreement comprises the counties of Hull, Gatineau, Pontiac, Wright, Labelle and Papineau.

6. The legal holidays shall be all Sundays of the year, Catholic holy days of obligation, Labour Day; workmen obliged to work on these days shall be paid double time.

7. Employees shall be paid regularly each week; payment of wages must never be delayed.

8. The general contractor is personally responsible for the carrying out of the present agreement by his sub-contractors.

9. The present agreement does not apply to building contracts signed before the coming into force of this agreement.

10. The present agreement shall be in force from the date of the publication in the *Quebec Official Gazette* of the Order in Council approving the present request, and shall remain in force until the 1st of May, 1936. It shall be renewed automatically for another year, unless one of the parties hereto have notified the other party of his intention of amending or repealing the same, at least thirty days before its expiration.

**BUILDING TRADES, QUEBEC.**—The Order in Council, the terms of which were published in the LABOUR GAZETTE, September, 1934, page 823, to which was added an additional clause

which was printed in the LABOUR GAZETTE, February, page 149, has been further amended by a new Order in Council, approved February 16, 1935, and published in the *Quebec Official Gazette*, February 23. This provides for the substitution of the following paragraph for paragraph (d) of Article I of the original Order in Council:—

“(d) The words ‘journeyman-plasterer’ designate any worker who executes plastering work such as the laying of celanite, finishing in rock wall, cement, mortar, stucco, plaster mouldings, the laying or pouring of ornaments, the mixing of lime with plaster or the mixing of lime with white cement; the man who prepares the moulding, that is to say, lays the rules for the cutting of the moulding.”

#### BRICKLAYERS AND PLASTERERS, THREE RIVERS.

—The agreement which was made obligatory by Order in Council and which was published in the LABOUR GAZETTE, October, 1934, page 912, has been amended by a further Order in Council, approved February 8, 1935, and published in the *Quebec Official Gazette*, February 16, by adding the following after Article 2 of the original Order in Council:—

2-A.—The rates of wages for apprentices will be the following:—

Apprentices—	Per hour
1st year.. . . .	\$0 15
2nd year.. . . .	0 25
3rd year.. . . .	0 35

**BUILDING TRADES, QUEBEC.**—Requests have been published in the *Quebec Official Gazette* for three additional changes in the Order in Council for these trades, which Order was published in the LABOUR GAZETTE, September, 1934, page 823, with one change already noted in the LABOUR GAZETTE, February, page 149, and another change noted in a preceding paragraph of this article. The additional changes requested are: the inclusion of the counties of Beauce and Charlevoix in the territorial jurisdiction; that calls for tenders upon which no decision has been given or which have remained in abeyance to date are not to be exempt from the provisions of the Order in Council even if tenders were called before the Order in Council came into effect; a change in the definition of the term carpenter-joiner.

**GLOVEMAKERS, PROVINCE OF QUEBEC.**—Application has been made and printed in the *Quebec Official Gazette*, March 2, for the extension of an agreement between certain glove manufacturers and the National Catholic Unions of Glovemakers of Montreal and of Three Rivers. The hours of labour indicated are 49 per week, and the wage rates shown are piece rates.

**BUILDING TRADES, THREE RIVERS.**—Application has been made and printed in the *Quebec Official Gazette*, February 16, for the extension

sion of an agreement covering certain building trades not already included in previous Orders in Council for this district. Wage rates are: 65 cents per hour for hoisting engineers, 60 cents for experts in terrazzo work, tile and mosaic layers, 55 cents for carpenters and joiners and carters with two-horse vehicle, 50 cents for structural steel workers, stationary enginemen, joint finishers, cement finishers, 45 cents for lathers and carters with one-horse vehicle, 40 cents for plaster pourers, hod carriers, mortar makers and celanite mixers and 35 cents for common labourers with wages for apprentices 15 cents during first year, 25 cents during second year and 35 cents during third year. Lower rates of wages are provided for all classes for work on contracts of less than \$5,000 in places of a population of less than 5,000.

**BUILDING TRADES, MONTREAL.**—Application has been made and printed in the *Quebec Official Gazette*, March 2, for the extension of an agreement between the Montreal Builders Exchange, the Building Trades Council of

Montreal and district and the Building Trades Council of Montreal, Incorporated (National Catholic Unions). The wage rates in this agreement are the same as those which came into effect last year (*LABOUR GAZETTE*, July, 1934, page 637), except that the regular rate for plasterers is increased from 67 to 70 cents per hour, the rate for hod carriers reduced from 45 to 40 cents per hour, that the additional classes of shovel enginemen at 75 cents per hour, asbestos coverers at 60 cents, carpenters (concrete forms, shop or job) 60 cents, building caulkers, gas mixer enginemen, compressor enginemen and construction firemen are added at 45 cents per hour. In places outside the Island of Montreal, St. Lambert and Longueuil where the population is less than 5,000, for work on contracts of less than \$10,000, the rate for sheet metal workers is increased from 40 to 45 cents per hour. The wage rates for work on the latter contracts for the trades which are added in the new agreement are proportionately lower.

## HOURS OF WORK IN HAIRDRESSING ESTABLISHMENTS IN QUEBEC

### New Orders under Limiting of Working Hours Act and Industrial Establishments Act

**T**WO new orders relating to the working hours of employees in beauty parlours and ladies' hairdressing establishments in the Province of Quebec were gazetted on February 16. The first order is under the provisions of the Act respecting the Limiting of Working Hours (*LABOUR GAZETTE*, July, 1933, page 695); and the second is under the Commercial and Industrial Establishments Act, which Act was widened in scope last year so as to include shops and stores (*LABOUR GAZETTE*, May, 1934, page 438).

#### ACT RESPECTING THE LIMITING OF WORKING HOURS

The Honourable Minister of Labour, in a memorandum dated February 8, 1935, sets forth:

1. That pursuant to Article 1 of the Act respecting the Limiting of Working Hours (23 Geo. V, ch. 40) the Lieutenant-Governor in Council may order the number of hours, either per day or per week, during which a workman may work;

2. That pursuant to Article 3 of the said Act, beauty parlours and ladies' hairdressing establishments, do not suffer in any manner from competition of other countries or other provinces;

3. That pursuant to article 5 of the said Act, on the 28th of January, 1935, he called a meeting of the official representatives of employers and employees associations of beauty parlours and ladies' hairdressing establishments for the district of Montreal, and consulted them on the mode of limiting the working hours in the said industry;

The Honourable Minister recommends:

That the following provisions be put into force:

Article I.—On and from the date of the publication of the present Order in the *Quebec*

*Official Gazette*, the time of labour in effect, for the employees of both sexes, in beauty parlours and ladies' hairdressing establishments, must not exceed 55 hours per week.

Article II.—The division of working hours to be the following: the first five days of the week, the hours of labour to be distributed between 9 a.m. and 7 p.m.; Saturday between 9 a.m. and 9 p.m.

Article III.—The proprietors of Beauty Parlours or ladies' hairdressing establishments, must grant their employees, each day, one hour for their noon-day meal and on Saturday, one hour for their evening meal.

Article IV.—The present order is applicable within the limits of the Island of Montreal.

#### ACT RESPECTING COMMERCIAL AND INDUSTRIAL ESTABLISHMENTS

The Honourable Minister of Labour, in a memorandum dated February 8, 1935, sets forth:

Whereas pursuant to the 3rd paragraph of article 3 of the Commercial and Industrial Establishments' Act (R.S.Q., 1925, ch. 182 and amendments thereto), the Lieutenant-Governor in Council may exempt certain workshops from the provisions of the Industrial and Commercial Establishments' Act;

Whereas beauty parlours and ladies' hairdressing establishments should benefit by a special regulation in virtue of the Act respecting the Limiting of Working Hours (23 Geo. V, ch. 30) in so far as it affects the duration of labour of its employees.

The Honourable Minister recommends:

That the Order in Council No. 1492 of June 13, 1934, concerning the general regulations for the carrying out of the Industrial and Commercial Establishments' Act, be amended by the addition of the following article 97:

No. 97.—"Beauty parlours and ladies' hairdressing establishments shall be exempted from the provisions respecting the time of labour for women, girls and boys under 18 years of age."

## BRITISH COLUMBIA BOARD OF INDUSTRIAL RELATIONS

### Orders under Male Minimum Wage Act governing Stationary Engineers and Elevator Operators

THE Board of Industrial Relations of British Columbia issued the following new Orders on February 8, 1935. The Board is composed of the following members: Mr. Adam Bell, Deputy Minister of Labour (chairman); Professor W. A. Carrothers, chairman of the Economic Council; Mr. C. J. McDowell; Mrs. Fraudena Eaton; and Mr. James Thompson.

#### ORDER No. 18.—Order establishing a Minimum wage in the Occupation of Stationary Steam Engineers

Pursuant to the provisions of the "male Minimum Wage Act," being chapter 47 of the Statutes of British Columbia, 1934, the Board of Industrial Relations hereby orders:

1. That where used in this Order the expression "stationary steam engineer" means every employee engaged in the occupation of producing steam in a steam plant under the authority of a certificate of competency, as defined by section 28(1) of the "Boiler Inspection Act," being chapter 6 of the Statutes of British Columbia, 1931, or who is in charge of, or responsible for, any steam boiler or engine while

under steam-pressure or in motion; and the expression "special engineer" means every such employee operating under the authority of a special certificate or a temporary certificate, as defined by the said section 28 (1) of the said "Boiler Inspection Act."

2. That, subject to the exemptions granted from time to time under section 6 of the said "Male Minimum wage Act" the minimum wage for every such stationary steam engineer shall be fifty cents (50c.) per hour.

3. That, subject to the exemptions granted from time to time under section 6 of the said "Male Minimum Wage Act," the minimum wage for every such special engineer shall be forty cents (40c.) per hour.

#### ORDER No. 19.—Order establishing a Minimum Wage for Elevator Operators

Pursuant to the provisions of the "Male Minimum Wage Act," being chapter 47 of the Statutes of British Columbia, 1934, the Board of Industrial Relations hereby orders:

That, subject to the exemptions granted from time to time under section 6 of the said Act, the minimum wage for every elevator operator over the age of 18 years shall be fourteen (\$14.00) a week of forty-eight (48) hours, or twenty-nine and one-sixth cents (29 1/6c.) an hour.

## MEDICAL SERVICE FOR INDIGENT PERSONS IN ONTARIO

THE Hon. David Croll, Minister of Public Welfare for Ontario, announced on February 12 that the following plan for providing medical service for destitute persons would become operative on March 1, 1935. The plan, which was framed by the provincial government after consultation with the Ontario Medical Association, provides as follows:—

1. Medical services of the highest quality will be available whenever necessary to every indigent—man, woman, or child—in all organized municipalities of Ontario.

2. The same services will be provided for the war veteran with a small pension, and for his family, if they are receiving relief from the Federal Government.

3. The plan is compulsory upon all organized municipalities, in contrast with the present medical relief system, which is purely permissive, and in practice has been confined to the larger centres.

4. For the service, the Province and the municipality will jointly pay monthly the sum of 25 cents for every individual on relief. This amount is fixed by agreement between the Government and the Ontario Medical Association, and will be calculated on the maximum number on relief in the municipality

during the month. The division as between Province and municipality will be on the same ratio as the division of direct-relief costs—in most instances, two-thirds from the Province, one-third from the municipality.

5. The patient will have the right to designate his own doctor, nor will he be confined in his choice to the physicians in his own municipality; and he is at liberty, on notice to the Relief Officer, to change doctors if he is not satisfied with the service he is receiving.

6. All qualified medical practitioners, whether or not they are members of the Ontario Medical Association, can participate.

7. Every member of the relief recipient's family must receive, under the agreement, service equal to that provided by the doctor to his private patients.

8. All necessary medicines must be prescribed by the doctor and dispensed by a qualified druggist, and the cost is included in the fixed payment of 25 cents made by Province and municipality. An exception is made in the case of outlying districts, without pharmaceutical facilities, where the doctor may dispense his own medicines, without increase in cost.

9. Administration, without cost, will be in the hands of local committees of the Ontario

Medical Association and pharmacists, on a county or city basis. The committee will distribute funds made available by the Province and municipality.

10. The doctor will prescribe for all the patient's needs.

11. The cost to the Province will be no greater, but the service to the indigent, until

now confined to the larger centres, will extend to all parts of the Province.

12. Unorganized municipalities in Northern Ontario do not come within the scope of the new plan, because of their sparse population and problems of travelling. An effort will be made to meet their special needs through another system.

## CHILD WELFARE AND MOTHERS' ALLOWANCES IN SASKATCHEWAN

The administration of mothers' allowances, child welfare and old age pensions in Saskatchewan during the year ended April 30, 1934, is reviewed in the recently published annual report of the Bureau of Child Protection in which is included the Old Age Pensions Branch.

In an outline of the procedure and methods employed, the Commissioner of Child Welfare reported that since the inception of the department 4,218 children have been made permanent wards and approximately the same number have been placed in homes. During the fiscal year under review, there were 1,166 dependent children under official care, of whom 881 were wards of the Commission, the balance being under the five children's aid societies of the province. The total amount in trust accounts and bank savings in the names of children at the end of the fiscal year was \$7,011.72.

Other phases of child welfare activity dealt with juvenile delinquency, mental defectives, legal adoption of children, children of unmarried parents, blind children, and the work of the children's aid societies.

*Mothers' Allowances.*—The annual report of the Mothers' Allowances Branch noted the "same steady increase during the year as was evident since the province has suffered from poor crops and unemployment." It was pointed out that the problems of administration had become intensified during recent years. In particular there was the problem of the family with children over sixteen years of age, and for which there is no provision under the Act. Consequently their support is often of necessity derived from the amount allowed for the children under sixteen years. There was also the problem of the father, certified as unfit for manual labour, but for whom there was no other employment.

The statistics indicated the following situation as at April 30, 1934: number of widows, 1,771; number of dependents, 663; number of guardians, 100; number of deserted wives, 74; total families, 2,608; number of children under

sixteen years, 6,794; amount paid, \$34,715.00; average paid per recipient, \$13.31; average paid per child, \$5.10. The total amount paid in allowances throughout the year was \$407,993.

*Old Age Pensions.*—There is also presented the annual review of the Old Age Pensions Branch. However, information respecting old age pensions in Saskatchewan, as well as for the whole of Canada, is given quarterly in the LABOUR GAZETTE. The most recent quarterly summary appeared in the LABOUR GAZETTE for February, 1935, page 142.

## Registered Trade Unions in Great Britain

The Chief Registrar of Friendly Societies has issued, in advance of Part 4 of his annual report for the year 1934, a report on registered trade unions in Great Britain during the past ten years. A summary table is given which shows that in 1933 there were 458 unions on the register, with 3,346,662 members at the end of the year. (The figures include 89 employers' associations with 53,809 members.) The largest industrial group of unions is "transport and general labour" followed by "metals, machines, implements and conveyances," "mining and quarrying" and "building, decorating, etc."

The income of these unions for 1933 included £6,392,124 received from members, £4,000,598 received as allowance from the Ministry of Labour for unemployment insurance and administration expenses; and £595,907 received from other sources.

Expenditures for the same year included £5,016,760 for unemployment, travelling and emigration benefit; £189,904 for dispute benefits; £620,719 for sick and accident benefit; £344,495 for funeral benefit; £1,061,531 for superannuation benefit and £302,195 for other benefits; £94,392 for political fund; and £207,672 for grants, etc., to federations and other bodies.

At the end of the year funds to the amount of £11,760,465 were standing to the credit of the union.

## UNEMPLOYMENT INSURANCE IN AGRICULTURE RECOMMENDED IN GREAT BRITAIN

THE British Ministry of LABOUR GAZETTE, February, 1935, contains a report on Unemployment Insurance in Agriculture upon which the following article is based. Section 20 (1) of the Unemployment Insurance Act, 1934, required that as soon as possible after the passing of the Act, the Unemployment Insurance Statutory Committee should make such proposals as might seem to them practicable for the insurance against unemployment of persons engaged in employment in agriculture (including horticulture and forestry), and make a report to the Minister of Labour containing their proposals and recommendations on the subject. The report of the Committee, of which Sir William Beveridge is Chairman, has now been laid before Parliament and published.

The Report opens with a review of the previous investigations and public discussion of the subject, the development of opinion on the desirability of unemployment insurance for agriculture, and a statement of the new factors in the present position.

In concluding this part of their Report, the Committee quote a report prepared by the Standing Committee of the Council of Agriculture for England, dated December 13, 1934, in which the Council reaffirm their view, previously expressed, that a scheme of unemployment insurance for agricultural workers is eminently desirable. They add that the scheme should be self-contained, and should have special provisions to meet the peculiar case of agriculture.

The Committee proceed to consider the relation of insurance in agriculture to insurance in other industries. Agricultural workers, in their opinion, cannot be put direct into the general scheme because (i) the general level of money wages is lower than in other industries; (ii) unemployment in agriculture, though substantial, is less than in the insured industries taken as a whole; (iii) agriculture has not been insured during the past fourteen years, and therefore should not be made liable for any part of the debt of the Unemployment Fund which was incurred during those years. They therefore recommend that agricultural workers should pay only such contributions as are required to provide a lower rate of benefit than in the general scheme, without any liability for the existing debt of the Unemployment Fund. They propose further that, while there should not be a legally separate unemployment fund for agriculture, the agricultural scheme should be

self-contained in finance with separate accounting.

The rates of contribution suggested are 1s. a week for males aged 21 to 64, and 10½d. a week for females of those ages, with lower rates for younger workers. The committee recommends that the contributions should be paid in equal amounts by the employer, the employed person and the state, as in the general scheme, i.e., 4d. from each for men, and 3½d. from each for women; they reject the plea that was put before them that the state should pay more than one-third of the total contribution.

The rates of benefit suggested are 12s. a week for a man aged 21 to 64 and 10s. 6d. for a woman between those ages, with lower rates for younger workers: the rates quoted compare with 17s. and 15s. respectively, in the general scheme. For adult dependents the committee suggest 6s. 6d. a week as compared with 9s. in the general scheme. As regards benefits for dependents' children, the committee make alternative suggestions: either 2s. a week for each dependent child, as in the general scheme; or 3s. for the first dependent child and 2s. 6d. for each of the other children. In either case the maximum payment to any one claimant should be 30s. a week.

The Committee discuss five special problems relating to the scope of insurance in agriculture, viz., the family farm, the piece-work contractor, the special seasonal worker, the Irish emigratory labourer and the private gardener. The report makes suggestions as to the number of contributions necessary before one may qualify for benefits. It was represented to the committee that, if all casual and seasonal agricultural workers were included their claims on the fund would be insupportable. The Committee consider that this problem cannot be dealt with either by exception or exemption or by the application of the seasonal workers' regulations under the Anomalies Act. They think, however, that the difficulty would be met by the ratio rule which is outlined in the report.

According to statistics presented in the National Safety News published under the auspices of the National Safety Council (United States) fatal accidents in the United States totalled 99,000 during 1934. These fatalities were grouped as follows: motor vehicle, 35,500; other public vehicle, 17,500; home, 33,000; and occupational, 15,500.

## UNEMPLOYMENT ASSISTANCE IN GREAT BRITAIN

### Temporary Restoration of Reductions Made Under the Regulations

A REVIEW of the draft regulations issued by the Unemployment Assistance Board governing the administration of Unemployment Assistance in Great Britain was given in the January issue of *THE LABOUR GAZETTE*, at page 21. These regulations contained the scale of allowances for relief purposes.

On February 5, the Minister of Labour announced the temporary restoration of reductions made under these regulations, his announcement in the House of Commons being as follows:

"The (Unemployment Assistance) Board have decided, and the Chairman has so informed me, that they are issuing immediate instructions to all their officers that all applicants to the Board should be assessed at the assessment under the Regulations if that is higher than the current transitional payments determination, or, where the current transitional payments determination has been reduced by the operation of the Regulations, at the current determination. Where reductions due to the Regulations have already taken place, retrospective payments will be completed as soon as the pressure of work permits. This arrangement can only be temporary, and for their subsequent procedure the Board will require the necessary Parliamentary sanction."

On February 15, the Unemployment Assistance (Temporary Provisions) Act, 1935, received the Royal Assent.

The Act is described in the preamble as "an Act to make temporary provision for securing, as nearly as may be, that the allowance pay-

able under Part II of the Unemployment Act, 1934 (*LABOUR GAZETTE*, August, 1934, page 744) to persons who but for the operation of subsection (2) of section 59 of that Act, would at any time since January 6, 1935, have been entitled to transitional payments, shall not be less than the transitional payments that would have been payable to them but for the operation of the said subsection. . . .

"The new Act provides that, upon any application for an allowance under Part II of the Unemployment Act, 1934 (i.e., the Unemployment Assistance Act, 1934) made in respect of the period for which the section is or is deemed to have been in operation . . . there shall be ascertained the amount which would, in the opinion of the officer, or on an appeal, the appeal tribunal by whom the application is determined, have been payable to him by way of transitional payments under subsection (1) of section 59 of the said Act, but for the operation of subsection (2) of that section; and that a supplementary allowance shall be paid to him equal to the amount, if any, by which the amount so ascertained exceeds the allowance payable to him under the said Part II, or if, by reason only of his inability to prove that he is in need of such an allowance, no such allowance is payable in his case, a supplementary allowance shall be paid equal to the amount payable by way of transitional payments; and any such supplementary allowance shall be in addition to any other sum payable to him by way of allowance under the said Part II."

### Subsistence Homesteads in the United States

An account of the federal program for the encouragement of subsistence homesteads in the United States is given in the *Monthly Labour Review* (Washington), January, 1935. The following paragraphs, taken from this account, give details of the new policy, and the progress made up to the end of 1934, in giving it effect.

A federal program of subsistence homesteads is being carried out by which it is hoped to demonstrate the value and feasibility, for wage earners, of the combination of part-time industrial employment with home gardening on a scale large enough to furnish a considerable proportion of the family food supply. Two agencies of the Federal Government are supporting this program—the Subsistence Homesteads Division of the Department of

the Interior and the Federal Emergency Relief Administration. The Subsistence Homesteads Division was allotted \$25,000,000 for the purpose, from funds available under the National Industrial Recovery Act. The Federal Emergency Relief Administration is promoting subsistence-homesteads projects as part of its program of rural rehabilitation. Thus the homesteads projects of the former are mainly for industrial workers and those of the latter for rural and agricultural workers.

Up to the end of December, 1934, the Subsistence Homesteads Division had approved 62 projects (43 of which had been publicly announced) and study was being made of about two dozen more. The house-construction stage had been reached in some 20 projects and land improvement work was

under way in nearly all of the remainder. In 8 projects the first group of houses had been completed and in 5 projects houses were occupied by their future owners.

Some of the projects of the Subsistence Homesteads Division have necessitated the establishment of entirely new communities with their own municipal, school, water, power, etc., systems, others are so located as to be able to make use of the facilities of existing towns or cities, and still others are built within the town or city limits. All three of the Federal Emergency Relief Administration projects have involved the construction of new villages, with all the pioneering work attendant thereon.

The Federal Emergency Relief Administration projects are designed to aid families now on relief to become self-supporting. Those of the Subsistence Homesteads Division are intended as steps in a process of redistribution of surplus populations and have provided for stranded groups, part-time industrial workers, and (in small measure) farmers on submarginal land; some of these families have also been on relief but the program is not designed as a relief program primarily.

The homesteaders in the Subsistence Homesteads Division projects will purchase their homes at 3 per cent interest, and the amortization period will be 30 years. While it is possible that a similar step will be taken in regard to the Federal Emergency Relief Administration projects, at the present the plan is to rent the homesteads to the families selected for participation in the experiment.

In all cases it is expected that a considerable proportion of the family's food supply will be derived from the home garden, poultry, etc., which will be features of every homestead. The net value of the food produced per settler is expected to be about \$200 per year, but will vary somewhat according to the size of the homestead, the fertility of the soil, and the methods of cultivation employed. It has been found that half an acre of good land is sufficient to produce all the fresh and canned vegetables for a family of five for the entire year, while an acre and a half will produce not only the vegetables but enough fruit and potatoes for the whole year.

One of the most difficult problems will be the provision of part-time employment at equitable rates in some industrial or other occupation which will yield a cash income. The ability of the leaders to solve this problem satisfactorily will in a large measure determine the degree of success of the program. It is planned that such employment will be furnished through (1) self-help work on the project, paid for partly in cash and partly in credit, (2) home crafts adapted to

the skills and aptitudes of the settlers, and (3) industrial enterprises which it is hoped to attract to the community.

It is emphasized that these homesteads are intended to be not merely a means of obtaining the family living but a new way of life. They are regarded as an 'anchor of social security' in that they will furnish both food and shelter, the two items most important in the budget. The homestead life will also provide an outlet, in many cases, for the creative instinct and skills of the settlers through the development of handicrafts. Those thus far initiated are weaving, basketry; wood carving, metal work, and the making of craft furniture. In several cases—as in West Virginia—handicrafts are assuming an important role in community economy. Of particular importance will be the social and cultural aspects of community life which it will be one function of the program to develop.

### Employment Service Activities in United States

Under the title "Twelve and One-half Million Registered For Work" the United States Department of Labour has recently published a report of the activities of the State Employment Services affiliated with the United States Employment Service and of the National Re-Employment Service for the year ended June 30, 1934.

As stated in the introduction, the passage of the Wagner-Peyser Act on June 6, 1933, provided for the inauguration of a nation-wide system of Federal-State public employment offices. With the abolition of the existing 150 federally operated employment offices on April 1, 1933, there were in existence at the time the Act was passed, 23 independent State employment services operating 192 offices in 120 cities.

On July 1 the new United States Employment Service set in motion the machinery to weld these 23 State services into a single co-operative Federal-State system and to encourage the organization and development of other State employment services which could be brought into the co-operative national system.

In response to the urgent demands of the recovery program, the United States Employment Service created the National Re-employment Service as a temporary emergency division to establish and operate offices in those counties and cities which could not be served by the existing or newly created State offices.

The results are presented in the bulletin which tells something of the nearly 13,000,000 persons who have registered with the offices of the United States Employment Service and affiliated services and of the 7,000,000 jobs on which some of the applicants have been placed.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Canadian Government Seat on the Governing Body of the International Labour Office

THE Governing Body of the International Labour Office, in the course of its 69th session from January 29th to February 2nd at Geneva, adopted a resolution in the terms following by 24 votes to 1 (that of the Canadian Government Representative, Dr. W. A. Riddell):—

The Governing Body,

Having considered the reports submitted by its Officers concerning the revision of the list of the eight States of chief industrial importance,

Recognizes that the eight States Members of the International Labour Organization of chief industrial importance are, in the French alphabetical order: Germany, the United States of America, Great Britain, France, India, Italy, Japan, Union of Socialist Soviet Republics.

Accordingly the representatives of the Governments of the above States will sit on the Governing Body as from the beginning of the next Session as representatives of the eight Members of chief industrial importance.

The following additional resolution was then adopted unanimously:—

The Governing Body,

Considering, moreover, that it would be just and expedient to enable the States which no longer figure on that list and which at present sit on the Governing Body to be associated with its work until the next elections of the Governing Body,

Decides to apply to them by analogy Article 3 of the Standing Orders of the Governing Body, and to regard them as Government deputy members.

In the discussion which occurred in the Governing Body on the reports made by its officers and by certain experts on the selection of the eight States of chief industrial importance, Dr. W. A. Riddell, the Canadian Government Representative, expressed disagreement with the conclusions reached in these reports. While admitting that the Governing Body could take note of the actual changes which might arise in the situation of the eight States of chief industrial importance, he contested its competence to fix the list of these States, on the ground that that duty belonged, in the first instance, to the International Labour Conference, and, in the event of dispute, to the Council of the League of Nations. Dr. Riddell argued that, in any case, the new list could not be applied immediately, since the composition of the Governing Body could not be modified during the period of three years which was the term of office of the elected members of the Governing Body. He criticized the criteria which had been employed with a view to determining the eight States of chief industrial importance. In conclusion he stated that Canada was entirely in favour of all necessary steps which would ensure that the United States would collaborate as soon

as possible in the International Labour Organization. He maintained, however, that the procedure proposed was contrary both to the letter and spirit of the constitution of the International Labour Organization, and that some other solution should be sought.

The following statement on this subject was made in the House of Commons on February 7th by the Minister of Labour:—

Mr. Speaker, a few days ago the hon. member for Quebec East (Mr. Lapointe) inquired with respect to Canada's permanent seat on the International Labour Organization, and I promised to give the answer as soon as I had the information. With the permission of the House I would like to read a short statement.

Part 13 of the Treaty of Versailles, which established the International Labour Organization, provided that its governing body should consist of representatives (a) of member States; (b) of employers' organizations, and (c) of workers' organizations. The States represented on the Governing Body were to be the eight States of chief industrial importance among the members of the International Labour Organization, who were to have permanent seats on the body, plus a number of States, first four and now eight, elected by the International Labour Conference for a three year term.

The question of determining which were the eight States of chief industrial importance presented difficulties from the inception of the organization. The first provisional list prepared in 1919 was challenged by a number of governments which thought they should be included in the first eight. It was not then known whether Germany and the United States would become members of the organization, and it was thought inexpedient to proceed to the establishment of a list which, everyone recognized, would require reconsideration if either of these great industrial States joined the International Labour Organization. Subsequently Germany decided to join the organization in 1920, but the United States deferred its application to enter until the summer of 1934.

In 1922 the Council of the League to which the question had been referred decided that the eight members of the International Labour Organization should be Germany, Belgium, Canada, France, Great Britain, India, Italy and Japan. This list was prepared on the basis of seven criteria, namely:—

(1) Total industrial population (in the strict sense of the term) including the mining and transport industries;

(2) The proportion which the industrial population bears to the whole population;

(3) Total horse-power (steam and water power), not including locomotives and vessels;

(4) Horse-power per head of population;

(5) Total length of railways;

(6) Length of railways per thousand square kilometres of territory;

(7) Development of the mercantile marine.

The list thus established has been in effect since 1922. Last year, however, the entry of Russia into the League of Nations, which involved its accession to the International Labour Organization and the decision of the United States of America to adhere to the International Labour Organization, created a new situation which was further complicated by the withdrawal of Germany from the League and the International Labour Organization—subject to two years' notice of denunciation—which will elapse in November, 1935. It was clear to everyone concerned that this new situation would require the preparation of a new list of the eight members of chief industrial importance.

It was the view of the Canadian Government that the determination of the eight States of chief industrial importance was, in the first instance, the function of the International Labour Conference—a body on which all members of the organization are represented—and which appoints three-quarters of the Governing Body, and that, consequently, the Governing Body itself was not warranted in assuming that function. From a careful study of the treaty and of the decisions affecting its interpretation we were led to the conclusion that whatever authority was competent to determine the list of eight States, this list should only be revised when the three-year term of the elected members of the Governing Body had expired. Finally, the question arose as to the criteria to be adopted.

These problems, primarily of a legal and constitutional nature arising out of the interpretation of the relevant parts of the Treaty of Versailles and of the opinions expressed on earlier occasions in the Council of the League of Nations, have been the subject of careful consideration by the Government. They were discussed with representatives of the International Labour Organization in Geneva by the Canadian delegation to the last assembly of the League. We have since kept in close touch with the discussions which preceded the last meeting of the Governing Body, at which it was decided to revise the list of eight States of chief industrial importance, and bring the revised list into force at the first opportunity. Our concern in these discussions has been to see that the International Labour Organization remained

constant to its constitution as it was laid down by the labour articles of the Treaty and has been interpreted by the competent authorities established for that purpose.

The legal and constitutional questions raised in the course of the consideration of this question are of importance to the smooth functioning of the International Labour Organization, and the Government are considering the advisability of requesting that steps be taken to clarify and place on a definite and unmistakable basis the procedure to be followed in determining at what periods and in what manner the list of eight States should be revised in future.

At the session of the Governing Body which ended on January 31, the Governing Body adopted a revised list of eight countries of chief industrial importance, namely, the United States, Great Britain, Germany, France, India, Russia, Italy and Japan, and voted unanimously to accord Canada and Belgium seats on the Governing Body as deputy members until 1937. This solution of a difficult question has the great merit of securing the close co-operation and responsibility of the United States in the work of an organization with which Canada has been associated from the beginning and to which it is the policy of this Government to give unwavering support. Nevertheless, the constitutional administrative question cannot be said to be satisfactorily settled.

#### Australia and the Organization

In the course of a discussion which occurred in the Australian Commonwealth Senate on December 12 regarding the value of the work being done by the International Labour Organization, Sir George Pearce, the Minister for External Affairs, made a statement in the terms following:—

We have to remember (he said) that, industrially, Australia is in the vanguard of nations. Our workers enjoy a higher standard than those of almost any other country. This means that, in international trade, countries having a lower standard of wages and conditions for their workers are able more effectively to compete with Australia. From this it follows that any action taken to increase the standards of living in other countries which are in competition with us must be of material benefit to the Commonwealth. . . . Every Convention that has the effect of improving standards in other countries makes better our position in competition for world markets. . . . The Government feels that Australia has much to gain from continued representation at the Conference, and arrangements are now being made for the selection of delegates for 1935.

## ANNUAL REVIEW OF BUILDING PERMITS ISSUED IN CANADA DURING 1934

THE Dominion Bureau of Statistics recently issued an Annual Review of Building Permits issued by 61 cities in Canada in 1934, with comparative data for the years 1920-1933. The report, containing charts and numerous tables, presents full information as to the extent of building activities throughout the Dominion, statistics being shown for building activities by provinces and cities and by types of buildings. Some paragraphs from the report are as follows:—

The partial recovery in business generally characterizing 1934 extended moderately to the building industry, according to revised statistics of building authorizations furnished by 61 leading cities to the Dominion Bureau of Statistics. The value of permits issued for construction was \$27,457,524; compared with the 1933 aggregate of \$21,776,596, this was an increase of \$5,681,028 or 26.1 per cent. The aggregate for last year, however, was considerably lower than in any of the years, 1920-1932. On the average, the value of the building permits issued in the preceding fourteen years for which data are available was \$136,065,161, of which the 1934 authorization constituted little more than a fifth. The wholesale prices of building materials during 1934, though higher than in the years, 1933-31, were decidedly lower than in any other year since 1920. The average index number of wholesale prices of construction materials, as compiled in the Internal Trade Branch of the Bureau on the 1926 average as 100, stood at 83.0 in 1934, compared with 78.3 in 1933, but with an average of 101.3 in the years, 1920-1933. Labour costs showed a further decline in 1934, according to the Labour Department's index of wage rates in the building trades, based on the 1913 average as 100. This index was 154.8 for the year under review, compared with 158.0 in 1933, 178.2 in 1932, 195.7 in 1931 and 203.2 in 1930, the maximum in the fifteen years for which building permits figures are available for the 61 centres.

The *MacLean Building Review* makes a monthly tabulation of the value of construction contracts awarded throughout the Dominion; during 1934, these totalled \$125,811,500, compared with \$97,289,800 in 1933, \$132,872,400 in 1932, \$315,482,000 in 1931, \$456,999,600 in 1930, \$576,651,800 in 1929, \$472,033,000 in 1928, \$418,951,600 in 1927, \$372,947,900 in 1926 and \$297,973,000 in 1925. There was, therefore, an increase of 29.3 per cent in 1934 as compared with the preceding year, but the 1934 total was lower than that for any other year since 1918. The value of the building permits

issued in the 61 cities in 1934 constituted 21.8 per cent of the total value of construction contracts awarded throughout the Dominion, while in 1933 this proportion was 22.4. The percentages in these two years were lower than in any other of the fifteen years for which figures for the cities are available. In 1921, when the 61 cities reported their highest proportion of total building work in the country, the percentage was 48.6, while the average percentage in the years 1920-1934 was 39.4.

Cities in four of the nine provinces (viz., Prince Edward Island, Quebec, Manitoba and British Columbia), showed a falling-off in the value of the building permits issued as compared with 1933; the largest decrease was in Quebec, where the 1934 authorizations were lower by \$1,011,098, or 14.4 per cent. On the other hand, there were increases in Nova Scotia, New Brunswick, Ontario, Saskatchewan and Alberta. The greatest gain, amounting to \$5,234,637, or 57.4 per cent, was in Ontario, while New Brunswick also reported a considerable increase of \$882,819, or 223.8 per cent.

Some 57 cities furnished detailed statements showing that they had issued nearly 2,580 permits for dwellings estimated to cost about \$8,590,000, and approximately 13,700 permits for other buildings at a proposed cost of almost \$14,407,000, while engineering projects valued at about \$555,000 were also reported during 1934. The average estimated cost per dwelling was therefore about \$3,334, while the average for other buildings was not quite \$1,051. The former category includes houses and apartments, and in many but not all cases, repairs and alterations. Permits for garages usually constitute a large proportion of the total number of buildings other than residential, but in most cases have a low valuation. During 1933, nearly 3,050 permits were granted for dwellings at a proposed cost of \$7,217,300, an average of \$2,370; some 14,200 permits were also issued for other buildings valued at \$12,628,000, giving a mean of not quite \$890 per building. There were also engineering projects undertaken, valued at about \$243,000.

### Hours of Work Act (British Columbia)

The *British Columbia Gazette* of February 28 contains notice of regulation No. 20 issued by the Board of Industrial Relations under the Hours of Work Act, 1934, whereby the occupation of elevator operator is added to the schedule.

## EMPLOYMENT CONDITIONS IN CANADA AT THE END OF FEBRUARY, 1935

### Reports of Superintendents of the Employment Service

THE employment situation at the end of February, 1935, was reported by the Superintendents of the Employment Service to be as follows:—

Farming in the Maritime Provinces remained quiet, except for the cutting and hauling of firewood and other seasonal chores. Some logging camps throughout the Miramichi district were gradually closing, as all contracts for cutting were filled, but others, elsewhere, were running as usual, or were busy preparing for the spring drive. Fishing was fair. Mines in the New Glasgow area operated from two to six days per week, while those in Cape Breton and vicinity worked from three to five days. Manufacturers of foodstuffs and confectionery reported business improving and saw-mills were busy, while other plants showed little change. A considerable drop was noted in the number of men employed in the steel industry, due to the close of the rail mill and shipping piers, however, with the opening of navigation a number of these workers would be re-employed. Building construction remained quiet, but relief work on highways and various other projects continued. Transportation, both passenger and freight, was good. Trade was fair. The customary demand for workers in household service was in evidence, with placements made accordingly.

Very little activity was reported in farming in the Province of Quebec, but the demand for loggers in certain sections of the province was very active. A slight change was noted in manufacturing. In Montreal, all trades, except clothing, were quiet; in Quebec City, although some factories were operating on reduced time, others showed some improvement, and in Three Rivers, a gain was noticeable in the paper industry. Little building construction was being carried on and at Montreal the demand for building labourers had declined, but snow removal, sidewalk cleaning and other work of a casual nature provided employment for a large number of idle men. Transportation was satisfactory and trade fair. Placements of women workers in domestic service were not as high as usual, for although orders in some centres were numerous enough, the registration of applicants was somewhat smaller.

Employment for farm workers in the Province of Ontario remained quiet, but enquiries were coming in regarding help for early spring work. Milder weather was having its effect in the logging group, as some operators were putting on extra men in order to assure delivery of logs to the mills before the spring

break-up of the logging roads. Mining was fairly active and reports from different areas indicated a busier time as soon as the snow disappeared. Many manufacturing firms reported business much improved over that of a year ago. Activity in the automobile industries was steadily increasing; iron and steel companies showed improvement; manufacturers of foodstuffs were also busy and textile factories were running well. Building construction remained at a low level, with little work being carried on other than that of a casual nature, repair jobs, or relief projects sponsored by the Government. Highway camps also received their quota of men. Requests for workers in the women's division remained steady, with wages slightly better.

Throughout the Prairie Provinces there was a good recovery in the demand for farm workers, although some sections reported a decline in placements, which was largely due to the fact that the men were unable to pay their fares. Logging was active, with the call for experienced men exceeding the supply. Milder weather had decreased coal orders considerably, so that some of the larger mines had started to reduce the number of their employees. Outside of Winnipeg, little building construction was underway and relief camps were still receiving their quota of men. Trade showed no noteworthy change, although a slight improvement was noted in the sale of hardware, automotive supplies and dry-goods. An increase was shown in vacancies, applications and placements in the women's division, with no difficulty found in filling city orders.

There were not many calls for farm help in British Columbia. Logging camps and saw-mills, however, were active and lumber export excellent. Prospects were good in the metal mining areas, but coal mines were not so busy, due to milder weather. No improvement of any importance was recorded in manufacturing. Little building construction was in progress, except that done as relief work by the Government, although Vancouver reported the outlook better than at the corresponding period last year. Relief camps also were in operation and receiving numbers of men. Shipping and longshoring were active at Prince Rupert, but not so good at New Westminster, while at Victoria, although the shipyards were quiet, work on the waterfront was good. Merchants reported a reasonable amount of business. Little change occurred in the women's section, except for a decline in the registration of new applicants.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN JANUARY, 1935

THE following information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on February 1 was 8,992, the employees on their payrolls numbering 885,556 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for January was 1,783 having an aggregate membership of 161,713 persons, 18.1 per

cent of whom were without employment on February 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 65 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

### (1) Employment Situation at the Beginning of February, 1935, as reported by Employers

Employment on February 1, 1935, showed some recovery from the seasonal contractions indicated at the beginning of January, according to data tabulated by the Dominion Bureau of Statistics from 8,992 firms whose payrolls aggregated 885,556 persons, compared with 883,525 in the preceding month. This increase of rather more than 2,000 workers since January 1, was smaller than the average gain indicated on February 1 in preceding years of the record, which commences with 1921, so that the index, after correction for seasonal influences, showed a decline of slightly over one point. It is significant, however, that the seasonal recession on January 1 had been decidedly smaller than usual for that date, and a revival of less-than-normal-proportions on February 1 might therefore be regarded as not out of the ordinary. The seasonally adjusted index, at 99.9 at the latest date, was higher than in any other month since the autumn of 1931, with the exception of January 1, 1935, when it stood at 101.2. The crude index, (based on the 1926 average as 100), rose from 94.4 on January 1 to 94.6 at the beginning of February, as compared with 91.4 at the same date in 1934. On February 1 in the other years for which data are available, the unadjusted index was as follows:—1933, 77.0; 1932, 89.7; 1931, 100.7; 1930, 111.6; 1929, 110.5; 1928, 102.0; 1927, 96.6; 1926, 91.8; 1925, 87.1; 1924, 91.7; 1923, 90.6; 1922, 79.9 and 1921, 91.2.

An analysis of the returns by industries shows that the most pronounced recovery on the date under review was that of a seasonal character in manufacturing, in which there was an increase of 13,749 workers, or 3.1 p.c. as compared with January 1, 1935; this improvement, like the year-end loss which preceded it, was below the average indicated on the same date in the fourteen preceding years for which data are available. Within the group of factory employment, the iron and steel, textile, leather and non-ferrous metal divisions showed the largest gains. Among the non-manufacturing industries, logging, coal and metallic ore mining, steam railway transportation and railway construction and maintenance also recorded heightened activity; the increased employment in railway construction and maintenance was chiefly caused by snow-clearing operations following severe storms. Declines were indicated, on the whole, in the remaining groups; local transportation, services, communications, building and highway construction reported moderate reductions in personnel, while there were very large, seasonal losses in retail trade, succeeding the intense activity of the holiday season. The contraction in retail establishments on February 1, like the gains which had been made in the preceding month, substantially exceeded the average for the years since 1920.

### Employment by Economic Areas

Improvement was recorded in the Maritime Provinces, Ontario and British Columbia, while the trend was unfavourable in Quebec and the Prairie Provinces. The advance in Ontario was considerable. Employment was more active than at the beginning of February of last year in each of the economic areas, except the Maritimes, where the index was slightly lower.

*Maritime Provinces.*—The trend of employment in the Maritime Provinces has very frequently been downward at the beginning of February in the fourteen preceding years of which employment data are available. On

ported largely increased staffs and there were smaller gains in leather and some other factories. The additions to payrolls in construction occurred in railway and highway work and were chiefly due to snow-clearing operations occasioned by severe storms. A greater increase had been recorded on February 1 in 1934, when the level of employment was slightly higher; the index at the beginning of February, 1935, stood at 100.1, as compared with 101.3 on the same date of last year.

*Quebec.*—Contrary to the favourable movement recorded in Quebec on February 1, 1934, there was a decrease on the date under review, when the working forces of the 2,142 co-

### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

**NOTE.**—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

February 1 of the present year, however, activity showed a moderate increase, 758 persons having been added to the reported payrolls; statistics were received from 628 firms, employing 71,236 workers, compared with 70,478 at the beginning of January. Manufacturing, logging, communications and retail trade reported curtailment, but substantial improvement took place in transportation and construction and maintenance, while coal-mining was also rather brisker. Within the manufacturing group, pulp and paper, textile and electric current plants showed reduced activity, but iron and steel works re-

operating employers aggregated 245,493, as against 250,469 on January 1, 1935. There were large gains, on the whole, in manufacturing, notably in leather, lumber, textile and iron and steel plants, while pulp and paper, tobacco and beverage factories were slacker. Logging also showed improvement. On the other hand, important curtailment in services, transportation, trade and construction reduced general employment in the province. The index on February 1, 1934, stood at 89.5, as compared with that of 88.5 indicated at the same date of last year; a considerable advance had then been reported, which

was due in part to extra staffs put on to clear the roads and railway tracks following heavy snow-falls; however, manufacturing had then also shown increases on a larger scale, while the seasonal declines in trade had involved the release of fewer workers than at the latest date.

*Ontario.*—Substantial improvement was shown in Ontario, where decided recovery was made in manufacturing, particularly in iron and steel, textile, pulp and paper, vegetable food, non-ferrous metal, lumber and leather factories; logging, mining and construction also recorded considerably greater employment. Trade, on the other hand, showed pronounced seasonal reductions, following the intense activity of the holiday season. Part of the gain in construction represented the absorption of additional men in the unemployment relief camps, but in general the numbers added to such staffs were decidedly smaller than at the first of February of last year. Data were received from 3,970 firms employing 382,083 persons on the date under review, as compared with 373,734 at the beginning of January. This increase of 8,349 workers, though smaller than that noted on February 1, 1934, exceeded the average increase at midwinter in the fourteen pre-

ceding years for which statistics are available. The index at 100.2 at the latest date, compared favourably with that of 95.3 at the beginning of February last winter.

*Prairie Provinces.*—Employment in the Prairie Provinces has, with few exceptions, declined on February 1 in the fourteen years for which records are available. The tendency was also unfavourable on the date under review, when 1,329 co-operating employers reduced their staffs by 2,754 persons, to 112,234 on February 1. Manufacturing, particularly of animal food products, communications, construction and trade showed lowered activity, but mining and logging reported improvement. The general loss was rather larger than the average decline indicated on February 1, in the years, 1921-1934. The index, at 89.2 on the date under review, was 4.5 points higher than at the beginning of February of last year.

*British Columbia.*—There was a moderate increase in employment on February 1, this took place mainly in construction, but manufacturing (notably in pulp and paper, iron and steel and non-ferrous metal works), coal-mining and shipping also showed heightened activity. On the other hand, logging, trade and services were slacker. Though not par-

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS

(AVERAGE CALENDAR YEAR 1926=100)

Feb. 1.....	94.6	100.1	89.5	100.2	89.2	89.6
Relative Weight of Employment by Economic Areas as at Feb. 1, 1935.....	100.0	8.1	27.7	43.1	12.7	8.4

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada by the firms making returns for the date under review.

ticularly large, the additions to staffs exceeded the average increase reported in the last fourteen years. The working forces of the 923 reporting firms aggregated 74,510, a gain of 654 persons as compared with their pay-rolls in the preceding month. Greater improvement had been indicated on February 1, 1934, but the index, at 84.1, was then several points lower than at the beginning of February in the present year, when it was 89.6.

Index numbers of employment by economic areas are given in Table I.

### Employment by Cities

The trend of employment was downward in Montreal, Toronto, Winnipeg and Vancouver, while in Quebec City, Ottawa, Hamilton and Windsor and the adjacent Border Cities, the tendency was favourable, the gains in the Border Cities being especially pronounced.

*Montreal.*—Manufactures showed considerable recovery, on the whole, notably in the footwear, textile and iron and steel groups, while tobacco and beverage factories were slacker. Transportation, trade and construction and maintenance also reported curtailment, to a considerable extent of a seasonal character. Data were received from 1,251

firms employing 121,642 workers, or 4,820 fewer than on January 1. Industrial activity in Montreal has usually advanced on February 1 in the years since 1923 when statistics for that city were first segregated. The index at the latest date, standing at 81.6, was fractionally higher than at the beginning of February in 1934.

*Quebec.*—Returns tabulated from 161 employers in Quebec City showed that they had enlarged their staffs from 11,640 in the preceding month to 11,761 persons on February 1, the index rising from 88.9 on the former to 90.0 on the date under review. Manufacturing afforded more employment, mainly in leather-using plants, and transportation was also busier. Trade and services, on the other hand, were seasonally dull. The index was fractionally higher than on the corresponding date of last year, when a rather larger gain had been noted.

*Toronto.*—Heavy seasonal losses took place in retail trade, and transportation and construction also reported curtailment; on the other hand, manufacturing showed pronounced improvement, mainly in vegetable food, pulp and paper, textile and iron and steel works. On the whole, there was a decrease of 3,519 in the number employed by the 1,326 co-operating firms, who had

Feb. 1.....	81.6	90.0	93.0	93.2	84.6	109.1	82.6	88.0
Relative Weight of Employment by Ci- ties as at Feb. 1, 1935	13.7	1.3	12.7	1.4	3.1	1.7	4.0	3.1

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated city to the total number of all employees reported in Canada by the firms making returns for the date under review.

112,589 employees. This decline was decidedly larger than that indicated on February 1 of a year ago, but the index of employment then was lower by over three points than on the date under review, when it stood at 93.0.

*Ottawa.*—There were seasonal declines in retail trade and building, but manufacturing and road construction and maintenance were rather more active; the gains in the latter were largely due to snow-clearing operations. One hundred and sixty-nine employers in Ottawa had 12,615 workers, or 64 more than on January 1. Employment was in practically the same volume as at the beginning of February, 1934, when a greater increase, on the whole, had been noted.

*Hamilton.*—Employment in Hamilton showed an important advance, mainly in the manufacturing group, in which large gains were shown by iron and steel plants. There were, however, losses of seasonal character in trade. Statistics were tabulated from 263 firms employing 27,029 persons, compared with 26,466 in the preceding month. The index, at 84.6, was nearly four points higher than on February 1 of a year ago; more marked improvement had then occurred.

*Windsor and the adjacent Border Cities.*—Considerable recovery was indicated in automobile factories, while other industries in the Border Cities showed little general change. The 163 co-operating firms reported 14,752 workers, as against 11,973 on January 1. The situation was decidedly better than at the same date in 1934, when the trend had also been upward, although the advance was on a smaller scale; the index then stood at 90.9, compared with 109.1 at the beginning of February in the present year.

*Winnipeg.*—The number employed in Winnipeg showed a large contraction, mainly in retail trade, while manufacturing reported a slight falling-off, and there were also small losses in construction and communications. Returns were compiled from 439 firms with 35,213 employees, compared with 36,504 in the preceding month. Employment was rather brisker than on February 1 of last year, when the curtailment indicated had been less extensive.

*Vancouver.*—Manufacturing on the whole reported moderately increased employment, particularly in the lumber, vegetable food and non-ferrous metal groups, while iron and steel plants were slacker; transportation and

Relative Weight of Employment by Industries as at Feb. 1, 1935.....	100.0	50.9	5.8	6.2	2.3	10.2	11.5	2.7	10.4

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada by the firms making returns for the date under review.

trade also released employees. The 390 reporting firms employed 27,767 persons, as against 27,948 on January 1. The index at 88.0, was some four points higher than at the same date in 1934, when a gain had been reported.

Index number of employment by cities are given in Table II.

### Employment by Manufacturing Industries

Considerable improvement was noted in factory employment on February 1, 1935, when the 5,319 co-operating manufacturers reported 451,195 operatives, compared with 437,446 in the preceding month. This increase of 13,749 persons raised the index from 87.4 on January 1 to 90.1 at the beginning of February. The advance, however, was smaller than the average indicated in the years since 1920, so the seasonally adjusted curve dis-

played a slightly downward trend from January 1, although, with that exception, it was higher than in any other month since July, 1931. Last month's review of employment pointed out that the experience of the manufacturing industries in the last fourteen years has shown on February 1 a substantial measure of recovery from the regular year-end losses; approximating, on the average, 51 p.c. of the preceding decline. The January bulletin also remarked that the seasonal contractions on January 1, 1935, (involving the release of 19,530 workers), were considerably below the average; while the revival on February 1 was likewise less than the average, the number reinstated nevertheless constituted over 70 p.c. of those laid off in the preceding month. This compares favourably with the average proportion of reemployment during the years for which statistics are available, although it was decidedly smaller than

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY MANUFACTURING INDUSTRIES (AVERAGE 1926=100)

Industries	Relative Weight	Feb. 1 1935	Jan. 1 1935	Feb. 1 1934	Feb. 1 1933	Feb. 1 1932	Feb. 1 1931	Feb. 1 1930

<sup>1</sup> The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

the February 1, 1934, percentage of recovery, which was nearly 95 p.c. of the contraction at the first of January in that year.

The February 1, 1935, index of employment in manufacturing stood at 90.1, compared with 87.4 in the preceding month, while at the beginning of February in the last fourteen years it was as follows:—1934, 84.2; 1933, 75.0; 1932, 85.9; 1931, 96.1; 1930, 110.2; 1929, 112.8; 1928, 102.3; 1927, 98.2; 1926, 93.0; 1925, 85.8; 1924, 91.9; 1923, 92.0; 1922, 79.0 and 1921, 91.8.

The most pronounced improvement on February 1 over the preceding month occurred in iron and steel plants, in which more than 9,200 additional workers were reported by the firms furnishing data, this gain being larger than the average increase between January 1 and February 1 in the years since 1920. There were also important gains in leather and textile factories, with smaller additions to staffs in the lumber, vegetable food, rubber, chemical, non-ferrous metal and miscellaneous manufacturing industries. On the other hand, animal food, fur, beverage, clay, glass and stone, electric current and mineral product plants showed curtailment.

The record for past years shows on March 1 a continuance of the upward movement indicated in manufacturing at the beginning of February.

*Animal Products, Edible.*—There was a considerable decrease in employment in this group at the beginning of February, comparing unfavourably with the moderate gain noted on the corresponding date last year, when the index, at 95.3, was between seven and eight points lower. Statements were tabulated from 251 firms employing 19,343 workers, as compared with 19,789 in the preceding month. Dairies, meat and fish-preserving plants reported losses.

*Leather and Products.*—Employment in boot and shoe factories very substantially increased, while other branches of the leather industry experienced only slight general changes. A combined working force of 20,021 persons was reported by the 276 co-operating manufacturers, who had 17,644 employees at the beginning of January. Most of the advance took place in Quebec and Ontario. Activity was decidedly greater than on February 1 of a year ago, the index at the latest date standing at 98.7 compared with 89.2 on the same date in 1934.

*Lumber and Products.*—Moderate expansion was indicated in sawmills and in container, furniture, vehicle and other lumber-using factories; 573 workers were taken on by the 790 firms making returns, who had 30,570 on their

staffs. This increase was much smaller than that registered at the beginning of February, 1934, when the index of employment was slightly lower. The gains in Quebec and Ontario were most extensive, while the tendency in British Columbia was downward.

*Musical Instruments.*—Thirty-five manufacturers of musical instruments (not including radios) reported partial recovery on February 1 from their seasonal declines in the preceding month; their staffs numbered 889 persons, as compared with 744 on January 1. The index stood at 31.1, as against 32.5 on the same date of last year, when contractions had been indicated.

*Plant Products, Edible.*—There was important improvement in the vegetable food group, according to the 420 reporting establishments, which employed 26,815 workers, compared with 26,393 in the preceding month. Starch and glucose plants showed losses, while other branches of the industry reported increased activity. A larger gain had been made on February 1 of last year, when the index stood at 89.1, as compared with 94.0 on the date under review.

*Pulp and Paper.*—Pulp and paper mills were slacker, while printing and publishing and paper product factories reported moderate gains. The general index was over five points higher than on February 1, 1934, when additions to staffs had been recorded. Data were received from 583 employers of 55,901 workers, as against 55,827 at the beginning of January, 1935; improvement in Ontario and the Western Provinces was nearly offset by declines in the Maritime Provinces and Quebec.

*Rubber Products.*—The trend of employment in rubber factories was upward, 52 of these enlarging their payrolls from 11,395 persons on January 1 to 11,565 on February 1. The index, at 90.7, was over four points higher than on the same date in 1934, when a greater gain had been indicated.

*Textile Products.*—The advance in employment in the co-operating factories was not so pronounced as that noted on February 1, 1934, when activity was, however, at a rather lower level than at the date under review. Silk, woollen, headwear, garment and personal furnishing and knitting establishments registered important increases in personnel, while cotton factories were decidedly slacker; the working force of the 924 co-operating firms aggregated 89,351 persons on February 1, 1935, as compared with 87,179 in their last report. Ontario and Quebec showed marked improvement.

*Tobacco, Distilled and Malt Liquors.*—There was a reduction in employment in this division, occurring mainly in beverage works. Returns for the beginning of February were tabulated from 162 manufacturers with 15,957 employees, or 689 fewer than in their last report. Employment was brisker than on February 1 of a year ago, when a rather larger number of workers had been laid off.

*Chemicals and Allied Products.*—Statements were compiled from 181 firms in this group, whose staffs aggregated 9,480, as compared with 9,245 at the beginning of January. Employment was more active than in the winter of 1934.

*Clay, Glass and Stone Products.*—A downward movement was recorded in this group on the date under review, according to 187 manufacturers, whose labour forces included 6,518 workers, or 177 fewer than in the preceding month. Employment generally was brisker than on February 1, 1934; an improvement had then been indicated.

*Electric Current.*—Curtailement was noted in electric current plants at the beginning of February; the 98 co-operating manufacturers reported 13,375 employees, compared with 13,880 at January 1. Activity was greater than on February 1 of last year, although the declines which had then taken place were on a smaller scale.

*Electrical Appliances.*—Employment in electrical appliance works showed little general change from January 1, but the index was almost seven points higher than on the same date of a year ago, when the tendency had been favourable. Data were received from 105 establishments employing 11,417 operatives, as against 11,447 on January 1, 1935.

*Iron and Steel Products.*—There were particularly important increases in employment in iron and steel factories, where the gains were larger than the average indicated on February 1 in the years since 1920. The recovery was most noteworthy in automobile and other vehicle and crude, rolled and forged works, while the agricultural implement, machinery, boiler, engine and tank, heating appliance, small hardware, sheet metal, foundry and machine shop and some other groups were also busier. The improvement in Ontario was most pronounced, but the trend was generally upward. Statistics were tabulated from 819 firms, whose staffs stood at 102,493, compared with 93,250 on January 1. The index, at 77.9, was nearly ten points higher than on the corresponding date of last year, when rather larger advances had been indicated.

*Non-ferrous Metal Products.*—Smelters and refineries and lead, tin, zinc, copper and other

works in this division recorded heightened activity. The gain in the group as a whole was not quite so large as that noted on February 1, 1934, when the index, at 97.5, was several points lower than at the date under review (viz., 111.5). The working force of the 150 co-operating manufacturers included 17,641 employees, or 803 more than at the beginning of January, 1935. The increase took place largely in Ontario and British Columbia.

*Mineral Products.*—One hundred and twenty-one establishments in the mineral products group reported 12,679 workers, as compared with 13,312 in the preceding month. Employment on the whole was slightly less than at mid-winter in 1934, when only a small decline had been indicated.

### Logging

A moderate increase was recorded in logging, in which employment was brisker than in any other month since February 1, 1930, except December 1, 1934. Statements were received from 317 operators employing 51,209 workers, as against 50,628 on January 1. The trend of employment was downward in the Maritime Provinces and British Columbia, but elsewhere improvement was reported.

### Mining

Coal and metallic ore mining showed heightened employment, while quarries and other non-metallic mineral mines were slacker. On the whole, there was an increase of 557 persons in the forces of the operators furnishing returns, who numbered 325. Their staffs aggregated 54,987 employees, of whom 25,616 were engaged in the mining of coal, 24,222 in metallic ores and 5,149 in non-metallic minerals, other than coal. A greater gain had been indicated in the groups as a whole on February 1, 1934, when the index was many points lower than on the date under review.

### Communications

The working force of the companies and branches reporting stood at 20,605 persons, compared with 20,795 in the preceding month, most of the reduction taking place on telephones. The number employed was rather greater than on the same date in 1934, when larger declines had been recorded.

### Transportation

*Street Railways and Cartage.*—There was a downward trend in employment in this division on February 1; the losses exceeded those noted on the same date in 1934, and the index then was fractionally higher. The 199 co-operating employers had 23,783 persons on their payrolls, or 409 fewer than

in the preceding month. There were small losses in all economic areas except the Maritimes where no general change occurred.

*Steam Railways.*—Improvement was noted at the beginning of February, when 410 persons were added to the operating staffs of the steam railways, mainly in the Maritime and Prairie Provinces. Returns were compiled from 101 companies and branches in this group, whose working forces aggregated 55,743 employees, as compared with 55,333 on January 1. Smaller gains had been noted on February 1 of last year, when the index stood at 69.9, as compared with 70.1 at the late under review.

*Shipping and Stevedoring.*—Employment in water transportation showed a slight falling-off; 95 employers released 43 workers from their payrolls, bringing them to 10,481 on February 1 of the present year. The index was fractionally higher than on the same date in 1934; the losses then recorded had been rather larger.

### Construction and Maintenance

*Building.*—Employment in building construction declined on February 1; the index, at 43.3, was nearly nine points higher than at the beginning of February a year ago, when an advance had been recorded. Statistics were received from 630 contractors, with 17,345 persons in their employ on the date under review, as against 18,248 on January 1, 1935. There were fairly small gains in the Western Provinces, but elsewhere the tendency was unfavourable.

*Highway.*—The number of persons reported by 315 employers in the highway construction and maintenance group was 59,586, or 1,476 fewer than in the preceding month. Activity advanced in the Maritime Provinces, Ontario and British Columbia, while there were decreases in Quebec and the Prairies!

*Railway.*—Considerable additions to staffs were noted in railway construction and maintenance, due to track-clearance after the heavy

snowfalls. Greater gains had been recorded on the same date in 1934, when the index was five points higher. Statements were tabulated from 34 employers in this group, with 24,954 persons on their payrolls, as compared with 23,639 in the last report. Increases in personnel were registered in the Maritime Provinces, Ontario and British Columbia, the greatest gain being in the Maritimes.

### Services

Employment in services was not so active as in the preceding month; 440 establishments had 24,067 employees, or 691 fewer than on January 1, 1935. The index, at 111.9, was some three points higher than on February 1 of last year, when smaller declines had been noted in this group.

### Trade

Following the heightened activity resulting from the Christmas and holiday season, there was a considerable falling-off in the number employed in trade on February 1. The losses, like the gains in the preceding month, were on a larger scale than these noted on the same date in 1934, and any other year of the record. The index of employment stood at 116.6 on February 1, 1935, compared with 111.6 on the same date of last year. The 1,132 trading establishments furnishing data reduced their payrolls from 102,470 employees on January 1, 1935, to 91,601 at the beginning of February. There were marked decreases in retail stores, while wholesale establishments showed a slight decline.

### Tables

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area, or industry, is of the total number of employees reported in Canada by the firms making returns on February 1, 1935.

## (2) Unemployment in Trade Unions at the Close of January, 1935

THE term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged at work outside their own trades or who are idle due to illness are not considered as unemployed. Unions which are involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of

unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The local trade union situation at the close of January remained practically unchanged from the previous month, the percentage of idleness standing at 18.1 in comparison with 18.0 per cent in December. The percentage for January was based on the returns tabulated from a total of 1,783 labour organizations, with a membership numbering 161,713

persons, 29,284 of whom were without work on the last day of the month. Employment generally was more plentiful than in January, 1934, when 21.2 per cent of idleness was reported. Throughout the provinces there were fluctuations in conditions from December of varying degrees, though not of particular importance in any one province. Nova Scotia and Alberta, chiefly owing to retarded activity in coal mining, reflected a less favourable movement than in December, and in Ontario also there was a small drop in work available, the manufacturing industries and building and construction trades being responsible for this adverse change. On the other hand, the manu-

Prince Edward Island are tabulated separately each month. Of these, Vancouver members were afforded a somewhat greater volume of work during January than in December and the situation in Winnipeg and Montreal was slightly better. Curtailment of activity from December to a marked degree was apparent, however, among Saint John unions and recessions of lesser importance, though noteworthy, occurred in Edmonton and Halifax. Toronto members suffered losses in activity on a more moderate scale, and in Regina the situation was but nominally adverse. Vancouver unions alone reported a lowering of the employment volume available from

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

facturing industries in Quebec, particularly the garment trades, were a deciding factor in the better employment trend noted in that province during January. In British Columbia the improvement from December was small, and of rather general distribution among the various trades and industries, New Brunswick, Manitoba and Saskatchewan showed gains of less than one per cent. All provinces shared in the employment advances noted over January, 1934, the most pronounced of which were reported from Manitoba, Saskatchewan and Alberta. In Ontario and Nova Scotia gains on a smaller scale were indicated while conditions in New Brunswick, Quebec and British Columbia improved moderately.

The returns on unemployment in the largest city in each province with the exception of

January, 1934, which was of rather small proportions. Conditions in Winnipeg, however, were much improved, and fair-sized gains in activity were registered by Toronto and Halifax unions. Employment expansion on a smaller scale was noted by Saint John, Montreal, Regina and Edmonton unions.

Appearing with this article is a chart which shows the unemployment trend by months from January, 1929, to date. The curve during January remained at almost the same level as in December, what very slight change was reflected being in an unfavourable direction. In this tendency was continued the general course of the previous two months when the projection of the curve was also upward. At the close of January the curve rested at a point below that of the corresponding month

in 1934, showing that unemployment was less prevalent during the month under review.

Conditions in the manufacturing industries were very slightly better during January than in the preceding month as manifest by the reports tabulated from 482 local unions, comprising a membership of 50,523 persons. Of these, 8,637 were unemployed at the end of the month, a percentage of 17.1 compared with 17.8 per cent in December. Heightened activity on a more pronounced scale was apparent from January, 1934, when 21.9 per cent of the

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

members reported were unemployed. Wood workers, and bakers and confectioners whose combined membership was small, reported noteworthy employment gains from December, and the situation for garment, hat and cap, leather, and iron and steel workers, and printing tradesmen improved rather slightly. On the other hand, cigarmakers, fur workers, metal polishers, and textile and carpet workers were considerably slacker than in December, and moderate curtailment was evident among papermakers. Declines in activity of lesser degree were shown also by brewery and glass workers, and general labourers. In making a comparison with the returns for January, 1934, in the manufacturing industries, employment recovery on a large scale was shown during the month reviewed by cigarmakers, metal polishers, glass, leather, hat and cap, and fur workers, and general labourers. The situation for iron and steel workers, bakers and confectioners, and brewery workers was also considerably better, and papermakers and printing tradesmen were afforded a somewhat greater volume of work. Much quieter conditions prevailed, however, for wood and garment workers than in January a year ago, and among textile and carpet workers there was a moderate falling off in work available.

Activity for coal miners at the end of January eased off to some extent, the 54 unions making returns with a total of 16,970 members showing that 1,169 were out of work on the last day of the month, a percentage of 6.9 in contrast with 3.9 per cent in December. Some slight improvement was evident from January, 1934, when 7.8 per cent of members reported were idle. Nova Scotia, Alberta and British Columbia miners all participated in this less favourable employment movement noted from December, Alberta unions showing the most pronounced drop in activity. When contrasting with the returns for January, 1934, British Columbia members suffered severe losses in work afforded during the month under survey, and declines on a small scale were manifest by Nova Scotia miners. These contractions in employment, however, were slightly more than offset by the recovery shown in Alberta.

From unions in the building and construction trades during January 211 reports were received, covering a membership of 17,247 persons, 10,621 of whom were idle on the last day of the month, a percentage of 61.6 in contrast with percentages of 58.6 in December and 69.2 in January, 1934. Bridge and structural iron workers and granite and stonecutters were afforded a much better volume of work than in December, and among hod carriers and building labourers the tendency was favour-

TABLE II.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

Month	Fishing	Lumbering and Logging	Mining	Manufacturing Industries	Vegetable products	Pulp and paper products	Printing, publishing and lithographing	Electric current	Wood products	Fibres, textiles and textile products	Textile and carpet workers	Garment workers	Hat, cap and glove workers	Animal products	Iron and its products	Non-ferrous metals	Clay, glass and stone products	Mineral products	Miscellaneous manufacturing industries	Building and construction	Transportation	Shipping and stevedoring	Steam railway operation	Local transportation	Communication	Telegraph operation	Telephone operation	Trade (retail shop clerks)	Services	Governmental	Miscellaneous	All occupations

able. On the other hand, substantial curtailment of activity was evident among electrical workers, while painters, decorators and paperhangers reported declines on a much smaller scale, though noteworthy. Among plumbers and steamfitters, and steam shovelmen, there was a moderate falling off in employment from December, and activity for carpenters and joiners, bricklayers, masons and plasterers and tile layers, lathers and roofers also subsided slightly. Electrical workers were the only tradesmen to indicate a slowing up of activity from January a year ago which was rather pronounced. Decidedly better conditions, however, were reflected by hod carriers and building labourers, painters, decorators and paperhangers, tile layers, lathers and roofers, and carpenters and joiners. The improvement reported by plumbers and steamfitters, bridge and structural iron workers, and steam shovelmen was of considerably lesser degree, while bricklayers, masons and plasterers and granite and stonecutters showed slight gains.

The trend of employment in the transportation industries during January was more favourable than in the previous month, and increases in activity of somewhat larger proportions were recorded from January, 1934. Returns for the month reviewed were furnished by 793 organizations of transportation workers with an aggregate of 53,888 members, 5,739 or 10.6 of whom were out of work on the last day of the month in contrast with percentages of 11.3 in December and 13.8 at the end of January, 1934. Unemployment for navigation workers during January eased off considerably from the previous month, though conditions were still quite slack and the tendency for street and electrical railway employees was toward increased activity. Steam railway employees, whose returns embraced nearly 80 per cent of the entire group membership reported, were afforded practically the same volume of work as in December. Among teamsters and chauffeurs there was but nominal adverse change. Compared with the situation in January a year ago steam and street and electric railway employees, and navigation workers were all more actively engaged during the month reviewed. The unemployment percentage indicated by teamsters and chauffeurs was small, while in January last year all members were reported at work.

The situation for retail shop clerks showed improvement during January over the previous month, unemployment standing at 4.4 in contrast with 7.8 per cent in December. The January percentage was based on the reports received from 5 associations covering a membership of 1,737 persons, 76 of whom were idle on the last day of the month. In January a year ago no inactivity was reported among these workers.

The 77 organizations of civic employees making returns at the close of January with a membership total of 7,530 persons indicated that 124 or a percentage of 1.6 were without work at the end of the month in contrast with percentages of 3.8 in December and 2.1 in January, 1934.

The miscellaneous group of trades showed little variation in conditions during January from the previous month, though the trend was toward lessened activity, while improvement on a moderate scale was reflected from January, 1934. This was apparent from the returns compiled from 114 local unions with 3,742 members, 585 of whom, or a percentage of 15.6, were out of work on the last day of the month as compared with 15.4 per cent in December and 18.6 per cent in January a year ago. Barbers reported a drop in employment of around 5 per cent from December, and hotel and restaurant employees a fractional decline. On the other hand, there was a 3 per cent gain in work available for unclassified workers, and employment advances on a somewhat smaller scale were recorded by theatre and stage employees, and stationary engineers and firemen. The level of activity for hotel and restaurant employees, stationary engineers and firemen, and unclassified workers was considerably higher during January than in the corresponding month of 1934 and slight improvement was noted by theatre and stage employees. Barbers alone reported some employment cessation.

Slackness continued very marked among fishermen during January, the 3 unions from which reports were tabulated with an aggregate of 722 members showing an unemployment percentage of 91.8, in contrast with 88.8 per cent in December. Pronounced curtailment was evident from January, 1934, when 27.0 per cent of idleness was registered.

Lumber workers and loggers indicated a more favourable employment movement during January than in the previous month, according to the returns furnished by 3 unions, involving a membership of 1,384 persons. Of these, 659 were idle on the last day of the month, a percentage of 47.6 as compared with 50.6 per cent in December. The situation was much quieter, however, than in January of last year when 21.8 per cent of the members reported were out of work.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1934 inclusive, and also the percentage of unemployment by provinces for January of each year from 1919 to 1932 inclusive, and for each month from January, 1933, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

### (3) Employment Office Reports for January, 1935

During the month of January, 1935, the volume of business as shown by the average daily placements effected by the offices of the Employment Service of Canada was over 11 per cent less than that transacted during the previous month and more than 22 per cent below that of the corresponding period a year ago. Under both comparisons, January with December and January, 1935, with January, 1934, manufacturing, services, mining and trade showed gains and construction, farming, logging and transportation declines, the most outstanding changes being the losses in construction and maintenance and farming from December, and that in construction and main-

relation to applications declined sharply during the first half of the month and showed an upward trend during the latter half of the period under review, but at the close of January both levels were about five points lower than those recorded at the end of January a year ago. The ratio of vacancies to each 100 applications was 53.3 and 55.6 during the first and the second half of January, 1935, in comparison with ratios of 50.3 and 60.3 during the same periods of 1934. The ratios of placements to each 100 applications during the month under review were 50.6 and 53.4, as compared with 47.6 and 58.2 during the corresponding periods a year ago.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

tenance from January, the decline in the last named group being greater than the net loss for the Dominion as a whole and resulting from the curtailment of placements on relief work.

The accompanying chart shows the trend of employment since January, 1933, represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Services throughout Canada, computations being made semi-monthly. It will be seen from the graph that the curves of vacancies and placements in

The average number of vacancies reported daily by employers to the offices throughout Canada during January, 1935, was 1,134, as compared with 1,287 during the preceding month and with 1,456 for January, 1934.

The average number of applications for employment received daily by the offices during the month under review was 2,085, in comparison with 1,910 in December and with 2,633 during January last year.

The average number of placements made daily by the offices of the Service during January, 1935, was 1,082, of which 605 were in

regular employment and 477 in work of one week's duration or less, as compared with a total daily average of 1,221 during the preceding month. Placements in January a year ago averaged 1,393 daily, consisting of 665 in regular and 728 in casual employment.

During the month of January, 1935, the offices of the Service referred 29,962 persons to vacancies and effected a total of 28,131 placements. Of these, the placements in regular employment were 15,717, of which 11,590 were of men and 4,127 of women, while placements in casual work totalled 12,414. The number of vacancies reported by employers was 21,632 for men and 7,835 for women, a total of 29,467, while applications for work numbered 54,190, of which 40,419 were from men and 13,771 from women. Reports for December, 1934, showed 32,165 positions available, 47,746 applications made and 30,513 placements effected, while in January, 1934, there were recorded 37,856 vacancies, 68,442 applications for work and 36,215 placements in regular and casual employment.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1925, to date:

Year	Placements		
	Regular	Casual	Totals
1925.....	306,804	106,021	412,825
1926.....	300,226	109,929	410,155
1927.....	302,723	112,046	414,769
1928.....	334,604	135,724	470,328
1929.....	260,747	137,620	398,367
1930.....	187,872	180,807	368,679
1931.....	175,632	295,876	471,508
1932.....	153,771	198,443	352,214
1933.....	170,576	181,521	352,097
1934.....	223,564	182,527	406,091
1935 (1 month).....	15,717	12,414	28,131

#### NOVA SCOTIA

During January, Employment Offices in Nova Scotia received orders for over 5 per cent more workers than in the preceding month, but 14 per cent less than during the corresponding month of last year. There was a nominal increase in placements when compared with December, but a decline of over 19 per cent in comparison with January, 1934. The decrease in placements from January a year ago was mainly due to the curtailment of relief work on road construction, although a moderate loss in services and small declines in all other groups, except farming, contributed to the adverse change under this comparison. Placements by industrial divisions included: logging, 62; construction and maintenance, 680; and services, 224, of which 181 were of

household workers. Placements in regular employment numbered 253 of men and 83 of women.

#### NEW BRUNSWICK

There was a gain of nearly 18 per cent in the number of positions offered through Employment Offices in New Brunswick when compared with the preceding month, but a decline of nearly 36 per cent in comparison with the corresponding month of last year. Placements were over 14 per cent higher than in December, but nearly 37 per cent less than in January a year ago. A large reduction in relief work placements on road construction was mainly responsible for the decline from January, 1934, as the losses reported in all other groups were quite small, with the exception of that in services. Placements under construction and maintenance numbered 279, while there were 473 placements in services: of the latter 362 were of household workers. During the month 99 men and 57 women were placed in regular employment.

#### QUEBEC

The demand for workers, as indicated by orders received at Employment Offices in the Province of Quebec during January, was nearly 7 per cent less than in the preceding month, but nearly 24 per cent above the corresponding month of last year. Placements also were nearly 7 per cent less than in December, but nearly 23 per cent above January, 1934. Substantial gains in placements over January of last year were reported in services, construction and maintenance and manufacturing and accounted for the increase under this comparison. These gains were slightly offset by a reduction in bush placements, but changes in other groups were small. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 342; logging, 379; construction and maintenance, 455; trade, 113; and services, 1,930, of which 1,776 were of household workers. There were 1,139 men and 1,434 women placed in regular employment during the month.

#### ONTARIO

Orders received at Ontario Employment Offices during January called for over 16 per cent less workers than in the preceding month and over 38 per cent less than during the corresponding month of last year. There was a decline also in placements of 17 per cent when compared with December and of over 37 per cent in comparison with January of last year. A very large reduction in relief placements on road and sewer construction was responsible for the decline from January, 1934, as losses

\* 222 placements effected by offices since closed.

in logging, transportation and farming were more than offset by gains in services and manufacturing. The increase in services was quite substantial. Placements by industrial divisions included: manufacturing, 513; logging, 806; farming, 302; construction and maintenance, 6,328; trade, 266; and services, 3,067, of which 1,949 were of household workers. There were 2,987 men and 1,310 women placed in regular employment.

#### MANITOBA

There was a decline of nearly 8 per cent in the number of positions offered through Employment Offices in Manitoba during January when compared with the preceding month and of over 2 per cent in comparison with the corresponding month of last year. Placements also were over 8 per cent less than in December and over 10 per cent below January, 1934. There was a small increase in placements in trade over January of last year, but losses were reported in all other groups. None, however, was large, except in logging. Industrial divisions in which most of the placements were effected during the month were: logging, 197; farming, 1,208; construction and maintenance, 1,073; trade, 53; and services, 604, of which 518 were of household workers. Placements in regular employment numbered 2,406 of men and 387 of women.

#### SASKATCHEWAN

Opportunities for employment, as indicated by orders received at Employment Offices in Saskatchewan during January, were nearly 17 per cent less favourable than in the preceding month and nearly 13 per cent below the corresponding month of last year. There was a decline also in placements of nearly 10 per cent when compared with December and over 8 per cent in comparison with January a year ago. The decline from January, 1934, was due to a reduction in relief placements on road construction, as small losses in logging, manufacturing and transportation were more than offset by gains in services and mining. The changes in other groups were nominal only. Placements by industrial divisions included: logging, 52; farming, 732; mining, 110; construction and maintenance, 510; and services, 738, of which 567 were of household workers. There were 1,083 men and 450 women placed in regular employment during the month.

#### ALBERTA

During January, positions offered through Employment Offices in Alberta were nearly 18 per cent less than in December and 31 per cent below January, 1934. There was a decline of over 11 per cent in placements when com-

pared with the preceding month and of nearly 28 per cent in comparison with the corresponding month of last year. The large decrease in placements from January, 1934, was almost entirely due to the curtailment of relief work and road construction, although small losses were also reported in farming, manufacturing and mining. These latter, however, were almost offset by gains in logging and trade. Industrial divisions in which most of the placements were effected during the month were: logging, 352; farming, 544; construction and maintenance, 902; and services, 355, of which 258 were of household workers. Regular employment was found for 1,638 men and 196 women.

#### BRITISH COLUMBIA

Employment opportunities, as indicated by orders received in Employment Offices in British Columbia during January, were nearly 29 per cent better than in the preceding month and nearly 6 per cent above the corresponding month of last year. Similar percentages of improvement were reported in placements under both comparisons. All industrial divisions, except logging, in which a nominal decline only was reported, participated in the increase in placements over January, 1934. Construction and maintenance and services showed the largest gains. Placements by industrial divisions included: manufacturing, 36; farming, 40; construction and maintenance, 3,253; and services, 668, of which 363 were of household workers. There were 1,985 men and 210 women placed in regular employment during the month.

#### Movement of Labour

During the month of January, 1935, the offices of the Employment Service of Canada made 15,717 placements in regular employment, 7,694 of which were of persons for whom the employment found was outside the immediate vicinity of the offices at which they were registered. Of the latter, 433 were granted the Employment Service' reduced transportation rate, 372 travelling to centres within the same province as the despatching office and 61 to other provinces. The reduced transportation rate which is 2·7 cents per mile with a minimum fare of \$4 is granted by the railway companies to bona fide applicants at the Employment Service who may desire to proceed to distant employment for which no workers are available locally.

Persons benefiting by the Employment Service reduced transportation rate in Ontario during January numbered 227, all of whom were bound for provincial employment. The movement from Port Arthur included the

transfer of 139 bush workers, 8 mine workers, 4 fishermen, 4 restaurant waitresses, 2 domestics, one constuction carpenter, one choreman, one diamond drill helper and one kitchen girl to various centres within its own zone, while from the same centre 3 bushmen were conveyed to Timmins. For employment within their respective zones Fort William transferred 32 bush workers and one mine cook, and Sudbury 24 bush workers and one cook. From Hamilton one dairy man proceeded to Timmins and one moulder to Windsor, the Timmins office being instrumental in the despatch of 2 miners to Sault Ste. Marie, and one mine machinist within its own zones. Transfers at the reduced rate in Manitoba during January were 62 in number and effected by the Winnipeg office. Provincially 8 workers travelled to employment within the Winnipeg zone, included among whom were 3 bushmen, 3 tractor operators, one lumber mill labourer and one hospital ward maid. Of the 54 persons going outside the province, the Port Arthur zone was the destination of 48 bush workers, 2 farm hands and 2 hotel generals, while the Regina and Saskatoon zones each received one farm hand. At Saskatchewan offices 13 persons secured certificates for reduced transportation during January, 6 of whom went to provincial centres and 7 to points outside. The latter were bushmen for the Winnipeg zone, 5 of whom travelled from Yorkton and 2 from Saskatoon. Within the province the Regina

office assisted in the transfer of one bushman to Yorkton and 3 teachers within the Regina zone, while to employment within their respective zones Yorkton transferred one bushman and Saskatoon one farm domestic. Alberta offices issued 116 certificates for reduced transportation during January, all to points within the province. Of these, 114 were granted at Edmonton to 97 bush workers, 4 farm hands, 5 farm housekeepers, 4 hotel workers, one mine cook, one sawmill engineer, one hotel worker and one construction foreman going to employment within its own zone. The remaining 2 certificates were secured at the Calgary office by farm hands, one of whom went to Edmonton and one within the Calgary zone. In British Columbia during January the labour movement was entirely to provincial centres, and comprised the transfer of 15 workers. These all received their certificates at Vancouver and included 8 miners and one mining engineer journeying to Kamloops, one farm hand and one steel sharpener to Penticton, one miner to Nelson, and 3 miners within the Vancouver zone.

Of the 433 workers who took advantage of the Employment Service reduced transportation rate during January, 307 were carried by the Canadian National Railways, 112 by the Canadian Pacific Railway, 8 by the Northern Alberta Railway, 3 by the Temiskaming and Northern Ontario Railway, and 3 by the Pacific Great Eastern Railway.

#### (4) Building Permits issued in Canada in January, 1935

There was a seasonal decline in the value of the building permits issued by 61 cities during January as compared with the preceding month, but the total was slightly higher than in January, 1934; the co-operating municipalities reported permits for buildings estimated to cost \$786,544, compared with \$2,521,820 in December, 1934, and \$707,812 in January last year. There was, therefore, a reduction of 68.8 per cent in the first comparison, but an increase of 11.1 per cent in the second and more significant comparison.

Some 50 cities furnished detailed statements, showing that they had granted some 75 permits for dwellings valued at about \$310,000, and about 375 permits for other buildings estimated to cost approximately \$330,000. In December, authority was granted for the erection of some 125 dwellings and 450 other buildings, estimated to cost approximately \$400,000 and \$1,900,000, respectively.

Saskatchewan was the only province to report an increase in the value of the building authorized during January as compared with

December, 1934, there being a gain of \$10,360 in this comparison. Of the declines elsewhere recorded, the greatest were those of \$1,366,506 or 74.9 per cent in Ontario, and of \$182,559 or 88.4 per cent in Alberta.

As compared with January, 1934, Quebec, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia showed increases; these were in each case on a small scale, that of \$29,622 or 35.2 per cent in British Columbia being largest. There were percentages declines of 54.8 and 84.4 in Nova Scotia and New Brunswick, respectively, but the reduction in the actual value of the authorized building was small, amounting to \$17,040 in Nova Scotia and \$15,967 in New Brunswick.

In Winnipeg and Vancouver there were increases in the value of the building permits granted over the preceding month, and also as compared with the same month of last year, while in Montreal and Toronto, there were declines in the former, but increases in the latter comparison. The following cities reported increases in both comparisons—Syd-

Year	Value of permits issued in January	Indexes of value of permits issued in January (1926=100)	Indexes of wholesale prices of building materials in January (1926 average=100)
	\$		
1935.....	786,544	16.7	81.8
1934.....	707,812	15.0	82.1
1933.....	1,185,961	25.1	75.7
1932.....	2,761,929	58.5	79.4
1931.....	8,401,456	178.0	84.0
1930.....	7,217,397	152.9	97.4
1929.....	8,416,880	178.3	98.0
1928.....	7,716,587	163.5	95.2
1927.....	5,676,537	120.3	96.8
1926.....	4,719,534	100.0	102.3
1925.....	5,447,270	115.4	101.9
1924.....	4,460,579	94.5	112.4
1923.....	4,139,498	87.7	109.8
1922.....	3,326,537	70.5	109.4
1921.....	2,595,564	55.0	143.0
1920.....	4,017,024	85.1	134.5

ney, Quebec, Three Rivers, Guelph, Owen Sound, Sault Ste. Marie, Moose Jaw, Saskatoon and New Westminster.

*Record for January in the years 1920-1935.*—

The following table gives the value of the building authorized by 61 cities during January of each year since 1920. Index numbers of wholesale prices of building materials in January of the same years are also given (1926=100).

The 1934 and 1935 figures for January were the smallest in this record of sixteen years, but it should also be noted that the wholesale costs of building materials were lower in January of these two years than in the winter of any other year since 1920, except 1932 and 1933.

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND UNITED STATES

### Great Britain

**E**MPLOYMENT at January 28, 1935, showed a substantial decline as compared with December 17, 1934. The decline was mainly in those industries which usually experience a seasonal set-back in January, including the distributive trades, the building and allied industries, road transport, dock and harbour service, hotel and boarding-house service, the wool textile, hosiery and clothing industries, printing and bookbinding, the furniture trades, and some of the food preparing industries. In building and public works contracting, employment at January 28 was adversely affected by unfavourable weather conditions. There was also a decline in employment in the cotton industry, general engineering, metal goods manufacture, and electric cable and apparatus manufacture. The only industry showing any marked improvement was hat and cap manufacture.

Among those workpeople of ages 16-64 who were insured against unemployment in Great Britain and Northern Ireland the percentage unemployed at January 28, 1935 (including those temporarily stopped as well as those wholly unemployed), was 17.7, as compared with 16.1 at December 17, 1934, and with 18.6 at January 22, 1934. The percentage wholly unemployed at January 28, 1935, was 14.9, as compared with 13.8 at December 17, 1934; while the percentage temporarily stopped was 2.8, as compared with 2.3. For males alone the percentage at January 28, 1935, was 20.0 and for females, 11.7; at December 17, 1934, the corresponding percentages were 18.5 and 9.7.

At January 28, 1935, the number of persons on the Registers of Employment Exchanges in Great Britain was 1,882,034 wholly unemployed, 353,994 temporarily stopped, and 89,345 normally in casual employment, making a total of 2,325,373. This was 239,558 more than a month before, but 63,695 less than a year before.

The increase, as compared with December, in the numbers recorded as unemployed, which is usual at this time of the year, was accentuated owing to the spell of unfavourable weather referred to above, and by a large registration of juveniles who reached school-leaving age at the end of the December term: it was also affected by the inclusion, in the total for January 28 of a number of persons, estimated at between 5,000 and 10,000, who would not have registered but for the introduction of the Unemployment Assistance Scheme.

The persons on the Registers included 1,119,054 persons with claims for insurance benefit; 784,242 insured persons with applications for unemployment allowances; 260,709 insured persons (including 27,556 insured juveniles under 16 years of age) not in receipt of insurance benefit or unemployment allowances, and 161,368 uninsured persons. In Great Britain and Northern Ireland the total number of persons on the Registers of Employment Exchanges at January 28, 1935, was 2,397,087.

### United States

*Manufacturing industries.*—Increases in factory employment and pay rolls were shown in January, 1935, as compared with December,

1934. These increases are particularly significant as employment and pay rolls usually decline in January. During the preceding 15 years for which data are available, gains in employment in January have been shown in only three instances (1920, 1923, and 1925) and pay rolls have declined in January of each year with one exception (1920). Pay rolls in January usually decrease more sharply than employment due to inventory-taking and repairs and, in some instances, where the pay period reported covers more than a one-week period, the observance of the New Year holiday.

Employment increased 0.6 per cent from December to January and pay rolls increased 1.4 per cent. Gains in employment were shown in 38 of the 90 manufacturing industries surveyed and increases in pay rolls were also reported in 38 industries. Among the industries of major importance in which gains were reported in January were: automobiles; blast furnaces, steel works, and rolling mills; foundries and machine shops; machine tools; men's clothing; women's clothing; boots and shoes; silk and rayon goods; and woolen and worsted goods.

The Bureau of Labour Statistics' index of factory employment for January, 1935, is 78.6 (preliminary) and the January index of factory pay rolls is 64.1 (preliminary). Employment in January, 1935, was 7.2 per cent above the level of the January, 1934, index (73.3) and pay rolls were 18.7 per cent above the level of the January, 1934, index (54.0). The base used in computing these indexes is the average for the 3-year period, 1923-1925, which is taken as 100.

A comparison of employment and pay rolls in the 90 separate industries in January, 1935, with January, 1934, shows gains in employment over the year interval in 68 industries and increases in pay rolls in 80 industries.

The indexes of factory employment and pay rolls are computed from returns supplied by representative establishments in 90 important manufacturing industries of the country. Reports were received in January from 22,941 establishments employing 3,372,912 workers whose weekly earnings were \$67,170,221 during the pay period ending nearest January 15. The employment reports received from these co-operating establishments cover more than 50 per cent of the total wage earners in all manufacturing industries of the country.

The gains in factory employment and pay rolls from December to January were particularly pronounced in the durable goods group of industries in which net increases of

2.6 per cent in employment and 3.8 per cent in pay rolls were shown. Employment in the nondurable goods group decreased 0.9 per cent and pay rolls fell off 0.4 per cent over the month interval.

*Non-manufacturing industries.*—Nine of the 18 non-manufacturing industries surveyed monthly by the Bureau of Labour Statistics reported gains in employment from December, 1934, to January, 1935, and 11 of the industries reported increases in pay rolls.

The most pronounced gain in employment over the month interval (2.5 per cent) was in hotels, and was due largely to the opening of winter resort hotels. Employment in the anthracite and bituminous coal mining industries registered gains of 2.1 per cent and 0.4 per cent, respectively, while the telephone and telegraph industry reported an increase of 1.1 per cent. The gains in employment in the remaining five industries reporting increased employment (electric railway and motor bus operation and maintenance, laundries, banks, brokerage, and insurance) were 0.2 per cent or less.

The largest percentage decline in employment from December to January (12.2 per cent) was in the quarrying and non-metallic mining industry, which was adversely affected by severe weather conditions. Employment in the building construction industry, in which operations are also regularly curtailed by winter weather, showed a decrease of 12 per cent, according to reports received from 10,285 contractors employing 65,031 workers in January. These reports did not include any workers engaged on building projects financed from P.W.A. funds.

Employment in retail trade establishments showed customary recessions in January, due largely to the release of workers engaged temporarily for Christmas trade. Based on reports received from 55,709 retail-trade establishments employing 858,442 workers in January, employment declined 11.1 per cent. The general merchandising group, composed of department, variety, general merchandise stores, and mail order establishments, showed a decrease of 26.8 per cent in number of workers over the month interval, while employment in the remaining retail establishments reporting, decreased 4.7 per cent.

Employment in the crude petroleum producing industry declined 4.8 per cent dyeing and cleaning, 2.8 per cent; power and light, 1.1 per cent; wholesale trade, 1.0 per cent; metalliferous mining and real estate, 0.3 per cent.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

REFERENCE was made in the January issue of the *LABOUR GAZETTE* (pp. 24-25) to amendments made to what are known as the "B" Conditions of the Fair Wages Policy of the Government of Canada applicable to contracts made by various departments of the Federal Government for fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers and other Government officers and employees; mail bags, letter boxes and other postal stores. The fair wages conditions in question were sanctioned by an Order in Council passed on December 31, 1934, and became effective from that date.

The new Fair Wages Clause applicable to all contracts for the manufacture and supply to the Government of the above-mentioned fittings and supplies is as follows:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rate in such district, then a fair and reasonable rate. In no event shall the wages be less than those set out in the schedule of minimum rates hereunder. The working hours shall be those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor, shall adjust the wages and hours and classification of work so as to give effect to such decision. In the event of a dispute arising as to what is the current or a fair and reasonable rate of wages, or what are the current hours fixed by the custom of the trade or fair and reasonable hours, or as to rates for overtime, it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with. By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

### *Schedule of Minimum Wage Rates*

Males (18 years of age or over), 30 cents an hour minimum.

Females (18 years of age or over), 20 cents an hour minimum.

Males and Females under 18 years of age shall not receive less wages than those provided for women and girls in the Minimum Wage Scale of the province in which this work is performed.

In certain of the Maritime Provinces where no minimum wage legislation is in effect, the contractors shall pay to males and females under 18 years of age wages not less than those provided for women and girls in the Minimum Wage Act of the Province of Nova Scotia.

In any province where the Minimum Wage legislation requires payment of wages in excess of those above set out, such higher rates shall apply on this work.

The Fair Wages Policy of the Dominion Government with respect to contracts "for construction, remodelling, repair or demolition of any work" is set forth in an Act of Parliament adopted on May 30, 1930, entitled "The Fair Wages and Eight-Hour Day Act" (chapter 20-21, Geo. V). The full text of this measure appeared in the *LABOUR GAZETTE*, April, 1930, page 383. The Fair Wages and Eight-Hour Day Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repairs or demolition of any work shall be subject to the following conditions respecting wages and hours:—

(a) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(b) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or, except in cases of emergency, as may be approved by the Minister.

The Fair Wages Policy was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by Order in Council of April 9, 1924. The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wages rates for the different classes of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the Department concerned in the terms of contract.

In addition to the requirements of the Fair Wages and Eight-Hour Day Act, government contracts for the construction, remodelling, repair or demolition of any work, contain a number of other provisions known as the "A" conditions, for the protection of the work-

men employed, which are sanctioned by the foregoing Orders in Council.

Both in the case of contracts for building and construction work, and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates and working hours.

The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and address of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed, claim therefor may be filed with the Minister of the Department with which the contract has been made and payments of such claim may be made by the latter.

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contracts for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially directed by the Fair Wages Orders in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of certain classes of supplies listed in the Fair Wages Orders in Council it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any

officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any disputes which may arise.

The Department of Labour is furnished from month to month with information regarding the contracts awarded by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed. During the past month, statements were received in the Department of Labour showing that the following contracts, containing fair wages conditions, have been recently executed by the Government of Canada:

#### DEPARTMENT OF MARINE

##### *Contracts in Group "A" (Construction, remodelling, etc.)*

Construction of extension to Pier No. 9, Richmond Terminals, Halifax, N.S. Name of contractors, J. P. Porter & Sons, Ltd., St. Catharines, Ont. Date of contract, February 11, 1935. Amount of contract, \$279,195. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Acetylene burners.....	\$0 45	8
Blacksmiths.....	0 40	8

## IMMIGRATION TO CANADA DURING THE CALENDAR YEAR 1934

THE accompanying tables, issued by the Department of Immigration and Colonization, show the nature and extent of immigration into Canada during the calendar year 1934, with some comparative figures for 1933.

Out of a total of 12,476 immigrants entering the country during 1934, 2,166 or 17 per

cent were British; 6,071 or 49 per cent were from the United States; 644 or 5 per cent were of Northern European races; and 3,595 or 29 per cent were of other races. The total number of immigrants in 1934 was 13·3 per cent less than in 1933. British immigrants numbered 6 per cent less, United States 28·6 per cent less and Northern European races 3·9 per cent less, while other races showed an increase of 23·6 per cent.

### Unemployment, Relief, Fair Wages, etc., in South Africa

The second report of the Department of Labour, Union of South Africa, which has just been received, reviews the administration activities during the calendar year 1933. In a chapter on unemployment and relief measures it was indicated that unemployment "reached proportions unprecedented in the history of the country" during September, 1933, when 50,345 adult males (European and coloured) were unable to secure employment in normal occupations. To cope with unemployment, the Union in that year introduced two schemes—the establishment of the Special Service Battalion and the Local "Armesorg" Committees. These Committees were established by agreement between the Department of Labour and the various charitable organizations acting under the general control of the Dutch Reformed Church, their object being to investigate cases of unemployment and to assist the unemployed in rural areas. The Special Service Battalion is not an employing body, but was conceived as a means of combating the evil results of idleness amongst adolescent boys. The Battalion absorbs many unemployed young men for whom provision would otherwise have had to be made on relief

works. No guarantee of permanent employment is given to these young men, but they are assured of six to twelve months' training and discipline after which every effort is made to place them in permanent employment either private or Government. The cost of the Battalion is shared equally by the Departments of Labour and Defence.

The report deals with the efforts of the Department to ensure the observance of fair conditions on government contracts as follows:

"Complaints have also reached the Department from time to time, that Government contracts are awarded to firms which do not observe fair conditions of labour and the fact is usually stressed that the wage regulation policy of the Government should be correlated with its buying policy. Every Government contract contains what is known as a 'fair wage clause,' in terms of which a contractor is required to observe conditions of employment which have been legalized under the industrial code or, in the absence of prescribed conditions, such conditions as generally prevail amongst good employers."

Included also are the reports of the chief inspector of factories and the Wage Board

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In each agreement, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Construction: Buildings and Structures

**TORONTO, ONTARIO.**—THE CONTRACTING PLASTERERS SECTION OF THE TORONTO BUILDING AND CONSTRUCTION ASSOCIATION AND THE INTERNATIONAL UNION OF PLASTERERS, LOCAL No. 48.

Agreement to be in effect from February 11, 1935, to March 1, 1936, and thereafter from year to year until cancelled or until either party gives notice by December 1 of any year, in which case negotiations for a new agreement to start January 1, and if no agreement reached by February 1, it will be referred to arbitration.

Only union members to be employed, and the union to give preference in supplying men to the employers, parties to this agreement. Employers will accept orders for union dues when signed by the members affected. Business agent of the union may interview men after consulting the employer and he may also inspect specifications. Only union members who have served their apprenticeship in the shop, may be employed as shop hands in the staff shop, if such men are available.

Hours: 8 per day, with a 5 day week of 40 hours. No work on Sundays or holidays. Except in case of emergency, when the consent of both parties is given, no work on Saturdays until 5 p.m. and then only at overtime rates. However when required for the pouring of concrete on Saturdays, this may be done at straight time until noon, and time and one half after noon. Where three shifts are worked and the overtime shifts equal at least two thirds of the regular shift, 8 hours pay for 7 hours work on all shifts.

Overtime: time and one half; Sundays and holidays double time.

Wages for journeymen plasterers: 90 cents per hour.

For work outside the area defined in the agreement, transportation and travelling time

up to 8 hours in a day (except travelling time on Sundays) to be paid by employers.

Foreman must be employed whenever 8 or more plasterers are working on a job, the foreman to be a union member, except when the employer directs the job himself.

When ten or more plasterers are employed, a superannuated man to be employed at not less than 60 per cent of the agreed wage scale.

Apprentices to be governed by the provincial apprenticeship act. One apprentice allowed each firm on shop work, and a second after the first has begun his third year, such apprentices to be indentured for five years.

Certain safety measures are included in the agreement.

A joint arbitration committee to be formed, and no strike or lockout to occur until a dispute has been referred to this committee.

**TORONTO, ONTARIO.**—THE CONTRACTING PLASTERERS SECTION OF THE TORONTO BUILDING AND CONSTRUCTION ASSOCIATION AND THE INTERNATIONAL LATHERS UNION, LOCAL No. 97.

Agreement to be in effect from March 1, 1935, to March 1, 1936.

This agreement is similar to the one for plasterers summarized above except the wage scale, and except that a foreman required where five or more lathers are working, and the clause with regard to employment of superannuated men is not included.

Wages per hour: metal lathers on metal furring and tied on work, also corner bead, base screed, picture moulding and metal stripping, 90 cents per hour: on all nailed on work except wood lathing 75 cents per hour; on all wood lathing 62½ cents per hour.

### Quebec Labour Agreements Extension Act

The following agreements in the Province of Quebec, not previously mentioned in this article have been made obligatory by Orders in Council and the terms so made obligatory printed in the *LABOUR GAZETTE* as follows:

FUR WORKERS, MONTREAL, January, page 26.  
BAKERS AND BREAD DISTRIBUTORS, THREE RIVERS, February, page 148.

BAKERS, QUEBEC CITY, February, page 148.  
BAKERS, SHERBROOKE, this issue page 238.  
MEN'S AND BOYS' CLOTHING WORKERS, PROVINCE OF QUEBEC, this issue, page 238.

PAINTERS, THREE RIVERS, January, page 26.  
ORNAMENTAL IRON AND BRONZE WORKERS, QUEBEC CITY, February, page 149.

BUILDING TRADES, HULL, this issue, page 240.  
GRANITE QUARRYMEN, PROVINCE OF QUEBEC, January, page 25.

## Agreement as to Wages, Hours and Working Conditions for Engine and Train Crews on the Temiscouata Railway

**A**N agreement as to rates of pay and rules governing the employment of conductors, brakemen, baggagemen, engineers and firemen, on trains of the Temiscouata Railway Company, has been signed by the management and representatives of these classes of employees, members of the Canadian Association of Railwaymen, effective from January 16, 1935, until changed or cancelled on thirty days' notice by either party. The railway runs from Rivière-du-Loup, Quebec, to Connors, New Brunswick, a distance of 125 miles.

The rates of pay are on the basis of 100 miles as a day's work, eight hours or less, as follows:—

Steam trains, per mile: engineers, 5·6 cents; conductors, 5·0 cents; firemen, 3·9 cents; brakemen, 3·7 cents; baggagemen, 3·7 cents.

Motor cars, per mile: operator, 4 cents, 5·3 cents (turn around runs), and 4·7 cents; con-

ductors, 4 cents, 5·0 cents (turn around runs) and 4·5 cents, all according to runs; helpers, 3 cents. In turn around passenger service overtime after 8 hours to be paid on the basis of 12½ miles per hour.

For switching at terminals wages are per hour: engineers, 70 cents; firemen, 48 cents; switchmen, 45 cents; with a minimum of four hours.

The agreement contains rules as to extra pay for specified classes of work, payment for time "held off" by the company, travelling for company, watching engines, etc., also for rest periods, meal time, seniority, promotion, leave of absence, investigation into suspension and dismissal, etc.

The right to negotiate with the company and interpret contracts, rules, etc., is vested in the regularly constituted committee of the Canadian Association of Railwaymen.

## Coal Production in Canada in January, 1935

Coal produced in Canada during January amounted to 1,513,209 tons, as compared with 1,290,912 tons a year ago and 1,268,346 tons, the average for the month during the past five years. The January, 1935, output consisted of 860,115 tons of bituminous coal, 68,599 tons of sub-bituminous coal and 584,495 tons of lignite coal. Alberta's output of 680,785 tons was 23 per cent higher than the total for January, 1934. During the month under review 176,095 tons of bituminous coal, 68,599 tons of sub-bituminous coal and 436,091 tons of lignite coal were produced in Alberta; in January, a year ago, 164,580 tons of bituminous coal, 65,597 tons of sub-bituminous coal and 324,496 tons of lignite coal were mined. Nova Scotia mines produced 506,564 tons of bituminous coal; in January, 1934, the output totalled 433,414 tons. An 18 per cent increase was recorded in Saskatchewan's production in January as compared with the output a year ago; the totals were 148,404 tons and 125,535 tons, respectively. Production in British Columbia declined to 143,084 tons from the January, 1934, total of 146,636 tons. New Brunswick operators reported an output of 34,372 tons or 16 per cent above the tonnage mined a year ago. Canada imported 479,026 tons of coal in January; this represented an 11·6 per cent decline from the tonnage brought into this country during January, 1934. The 1930-1934 average for the month was 730,263 tons. Receipts of anthracite coal in January

were made up of 161,808 tons from the United States and 5,826 tons from Great Britain. Imports of bituminous coal included 302,074 tons from the United States and 8,728 tons from Great Britain. Lignite coal importations from the United States amounted to 590 tons in January.

Exports of Canadian coal totalled 28,109 tons as against 17,956 tons in January, 1934, and 39,663 tons, the average for January during the past five years.

The annual report of Statistics of Criminal and Other Offences for the year ended September 30, 1933, published recently by the Dominion Bureau of Statistics, shows that among convictions for non-indictable offences there were during that period 1,492 convictions for non-payment of wages and 219 convictions for offences against the Masters' and Servants' Act. In 1932 there were 1,852 convictions for non-payment of wages; in 1931, 1,918; in 1930, 1,677; and in 1929, 1,484 similar convictions.

In the House of Commons, on February 20, Mr. J. A. Bradette (North Temiskaming) moved the following resolution, which he later withdrew on the understanding that the subject would be referred to the Committee on Agriculture: "That the Government should take into immediate consideration the establishment of a five-year plan for settlement on the land of the young farmers of this country."

## PRICES, RETAIL AND WHOLESALE, IN CANADA, FEBRUARY, 1935

### Cost of Living, Prices of Staple Articles and Index Numbers

**T**HE movement in prices during the month was slightly upward, the cost per week of the family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices both showing small advances.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was \$7.59 at the beginning of February as compared with \$7.51 for January; \$7.63 for February, 1934; \$6.70 for February, 1933; \$11.83 for February, 1930; \$11.50 for February, 1926; \$10.61 for February, 1922; \$16.92 for June, 1920 (the post-war peak); and \$7.75 for February, 1914. The advance during the month was due mainly to higher prices for meats, butter, cheese, beans, evaporated apples and sugar. Eggs showed a substantial seasonal decline. Including the cost of fuel and rent with that of foods the total budget averaged \$16.06 at the beginning of February as compared with \$15.99 for January; \$16.09 for February, 1934; \$16.51 for February, 1933; \$22.12 for February, 1930; \$21.87 for February, 1926; \$21.07 for February, 1922; \$26.92 for July, 1920 (the post war peak); and \$14.54 for February, 1914. Fuel was slightly lower. Rent was unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was slightly higher at 72.0 for February as compared with 71.5 for January. Comparative figures for earlier dates are 72.1 for February, 1934; 63.5 for February, 1933; 93.9 for February, 1930; 102.2 for February, 1926; 98.3 for February, 1922; 164.3 for May, 1920 (the post war peak); and 84.8 for February, 1914.

In the grouping according to chief component materials vegetable products, animal products and iron and its products advanced, while the other groups showed little change. In the grouping according to purpose both consumers' goods and producers' goods were higher, the former mainly because of higher prices for foods and the latter because of higher prices for certain manufacturers' materials, chiefly those used in the furs and leather goods industries and in the meat packing industries.

#### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of February of seventy-one staple foodstuffs, groceries, coal,

wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located but still fairly central, without modern conveniences.

The figures as to rentals are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amounts due.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which statistics were available when first published in the LABOUR GAZETTE in January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

### Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living, based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the food group in the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number for rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in

\*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18½%; Clothing 18½%; Sundries, 20%

each city. The index numbers for clothing and sundries were calculated from the prices and costs of the various items from 1913 to 1926, weighted according to the importance of each item in workingmen's family expenditure, and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

### Retail Prices

Beef prices were generally higher, increases being more pronounced in the western provinces. Sirloin steak was up from an average of 20 cents per pound in January to 20.9 cents in February, rib roast from 15.5 cents per pound to 15.9 cents and shoulder roast from 10.8 cents per pound to 11.3 cents. Mutton averaged 1½ cents per pound higher at 20.9 cents. Both fresh and salt pork were higher in most localities, the former being up from 19.4 cents per pound to 19.9 cents and the latter from 18.9 cents per pound to 19.2 cents. Eggs averaged substantially lower in practically all localities, fresh being down from an average of 37 cents per dozen in January to 32.9 cents in February, and cooking from 29.5 cents per dozen in January to 27 cents in February. Prices of fresh eggs averaged considerably lower in Ontario than in the other provinces. Dairy butter advanced in the average from 22.2 cents per pound to 24.3 cents and creamery from 25.5 cents per pound to 28 cents. Cheese also was somewhat higher at 19.7 cents per pound as compared with 19.4 cents the previous month. Beans and onions were fractionally higher, the former averaging 5.1 cents per pound and the latter 3.7 cents. Potatoes were 75 cents per ninety pounds in February as compared with 73.2 the previous month. Prices averaged considerably higher in the western provinces than in the eastern. Granulated sugar was slightly higher in many localities, the price averaging 6.5 cents per pound as compared with 6.4 cents in January. Anthracite coal averaged slightly lower, decreases being reported from St. Catharines and Windsor. No changes were reported in rent.

Following are the prices reported for Welsh coal, domestic sizes: Halifax, \$16 Windsor, \$16.50; Moncton, \$16; Saint John, \$14; Quebec, \$14.50; Three Rivers, \$15; Sherbrooke, \$16.25; St. Hyacinthe, \$15.50; Montreal, \$15.75; Ottawa, \$16.75; Kingston, \$16; Belleville, \$16.50; Peterborough, \$16.50; Oshawa, \$14.75; Toronto, \$15; St. Catharines, \$14.75; Hamilton, \$15; Brantford, \$16.75; Galt, \$16.50; Windsor, \$12.50; Sudbury, \$17.50; Cobalt, \$19; Timmins, \$19.50; Port Arthur, \$16; Fort William, \$16; Winnipeg, \$19.50.
